1. Re: Kenwood fixs major flaw w/ new 79a model D

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-01 00:22:12 UTC
From: mbrenner@csulb.edu
Message-ID: <3e4sjk$a6a@garuda.csulb.edu>
Source record: 221585

Excuse me but I thought that the amateur radio service was for
experimentation and recreation. I have no gripes with folks who want to
have a commercial grade radio that does one thing really well.

Some folks also enjoy the recreational value of all the bells and wistles
of the Kenwood units and the like. I have a kenwood and I don't play the
games but I do scan, (used to check RF activity before using Wireless Mics
"serious application") autopatched highway patrol to an accident when my
cellular was not charged and even listened to p. s. band stuff for no good
reason. When I want to use serious machines for serious work I go to
work. When I want to recreate I want somthing "fun", small, "cool" ...
affordable.

Have met many nice interesting folks on local repeater who also use
toy radios.

I am not saying that there is anything wrong with commercial grade units
I would love to have one myself (the kenwood is not all that solid a
unit), but neither type of unit is all things to all people.

If you really want to get arrogant you could reason that "real hams"
build their own, and arguments over mass produced gear is academic.

Best for the New Year

I was similarly bummed out and Kenwood would not help, so I happened to be in Amateur Radio Supply in Seattle, Wa. today, where I bought the TH-79 and the mamager exchanged my 79 for a new 79 D, no charge!!!!!
Kenwood should learn something about customer service from this!!

4. MCW Keyer for 2meter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-01 04:52:32 UTC
From: martinbw@jackatak.theporch.com
Message-ID: <0Pg9Xc1w165w@jackatak.theporch.com>
Source record: 221361

I am looking for a plan or kit to make a MCW keyer for a 2 meter HT or
mobile rig. Does any body know where I can find plans for such a device.

Thanks,
Bruce

5. E-Mail address for Standard

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-01 04:58:43 UTC
From: martinbw@jackatak.theporch.com
Message-ID: <k1g9Xc2w165w@jackatak.theporch.com>
Source record: 221578

Does anybody know of an E-Mail address for Standard Amateur Radio. I have a C5718 that I am having a problem with.

I have the remote head for the C5718 with a headset attached. After using it for about half an hour the head gets warm and I am no longer able to transmit. Either with the Headset or the Microphone. I have to turn the rig off and remove the headset to be able to transmit again.

I am also looking for a possible modification to be able to put the rig in cross-band repeat mode using frequencies in memory and with an offset.

Assistance and suggestions for any of these is appreciated.

I've been volunteered :-) to fix one of these puppies for a local emergency services organization of which I'm a member. However, they couldn't find a schematic, and this one ain't gonna be simple to fix without one.

Can anyone supply a schematic? If I'm really fortunate, can anyone supply a .GIF, Targa, JPEG, Sun raster or other graphic format?

Thanks.

1> Organization: Twin Cities Computer Network
1>
1> Hi, I have a few questions about the afformentioned radios.. Co
1> someone please give me a price of each? And the frequencies and
1> of each? Thank you, any help is appreciated...

The MOST important difference in the FT51r and the FT530 is
SIZE!! I didn't see that mentioned in any of the previous replies.
I have a 51 and have had a 530. There are a few differences beside
those already mentioned. The 530 can be configured to monitor the input freq by
depressing the small button under the PTT switch, can be modified for 800mhz
RX, has a clock, and therefore alarm
times to turn the rig on and off. None of these features are found on the 51,
nor are they missed. The difference in size is enough for me to choose the 51.
You can put it EASILY in your pocket or
purse which makes it very handy. Additional features on the 51 include
alpha-numerics, the ability to store names for freqs and display BOTH the freq
in the upper portion of the display and the name in the lower, spectra-scope,
to monitor adjecent activity and
find busy freqs, built user in help via alpha prompts which scroll
across the screen, and CW decoder! You can set this one up to talk to you in
CW. It will decode incomming MSG's (alpha-numeric) and
play them as received in CW!! You don't thae to be WATCHING the radio for MSG's
(if you use this feature). Any more questions please ask! Hope this helps!

>I am about to buy my first radio, I have been looking at the
>new YAESU FT51RH. Is this a good radio ???.

One of the locals popped up on the repeater with one of these last
week. I pestered him with all kinds of questions, and he answered
that he'd just got it out of the box and charged the battery so he
didn't know much yet. His audio sounded bassy and boomy, which wasn't
a good sign. I asked him about intermod, and he said he was going
downtown later and would check it out. I talked to him the next
day, and his audio was very clear. I asked him what he'd done
and he said that he'd taken the FT51RH back and traded it on a
mobile rig. The FT51RH was totally unusable downtown. Now that's
only one data point, and second hand at that, but I'd sure want
to test this rig is a high RF environment before committing to
it.

Hello. I know that you folks are a bunch of radio people and the
question I'm going to ask ins't really radio. But it IS electronic,
I don't know where else to post it, and I've found that radio folks
generally know some of everything when it comes to electricity, so,
here are my questions (any help is GREATLY appreciated!) :
Does anyone here know anything about the process of power
cogeneration (which is where I run a generator to the power lines on
my property and the power company has to pay me for the power generated)?
Do you know anyone who has experienced this before or could you refer
me to a book or a newsgroup or anything, or better still, email everything
there is know about it! :)
I'm also looking for as much info as possible on windmill generators
(such as efficiency, output, size, prices, some companies to contact, etc.)
If anyone can help at all with either question, please be kind enough
to email me!

Thanks very much!

HI, I had my 78 do a similar thing. I lost all tx power with the
exception of a few milliwatts and almost total loss of sensitivity on
uhf. Ordered a service manual and everything t try ans trace things.
Never could find a bad component. Re-touched everything on the uhf
board with a soldering iron and now the thing plays beautifully. THis
is the third story I have heard of trouble with the uhf unit. It seems
that something is either working loose or a connections are breaking
down due to heat or something. You may want to check to see if you
are truly getting output. My S meter on the radio showed full output
but there was only a few milliwatts at the antenna. I know this may
not help much but its a place to start... Good luck!
73..

I got my license because I thought that HAM would be a good
appendage (sp) to my hobbies. But I must say, looking at these type of
replies leads me to believe that persons like the above could squeeze a
diamond out of coal. Give it up man,, if you are such a tight ass then
live your morally flawless life as a hermit in your little ham station,,
give the preaching a damn rest. I have a Mobile, it is modified out of
band,, just about everywhere, and yes I have fucked with police before,
so chew on that a little. I waited months for the damn license and the
only thing I use it for is autopatch. Would you like to know why, I
thought you would, because of idiot old farts like you who want to know
how the weather is or how their signals are, or wow if I am mobile the
topic may be where I am. Ham has been a BORING dissapointment! (Thought I
would never say that).

On TOPIC: It is perfectly legal to have that radio while it is
modified. Lets break it down a little:

RECEIVE: It is perfectly legal to take any airborn signal and
alter it any way you want and do anything with it you want! That is the

law. (Some hamster will argue cable tv...(Ive heard it b4) Its on a cable you idiot,, that you dont own)(never stopped me)

Transmit: they cannot seize your radio for its capabilities ! If you use those capabilities it is at your own risk. If this was the case millions of hams would have their gear taken away for HF out of band capabilities, Amplifier skewing above 1500 watts, etc.! I can take a perfectly legal HF rig and do some Shortwave work, is that an illegal radio, no, that is an illegal person.
lets look at it this way, this tight ass I quoted, is he a cop?
,NO, Then we should take his car away cause it has the capability to go faster than 65 MPH (that is morally incorrect, no no no, slap slap!)

POINT TAKEN,, YOU CAN USE THIS MATERIAL IN COURT IF YOU WANT,, GENERALLY I FIND IF YOU MAKE A BIG ENOUGH SCREAM SOMEONE WILL GIVE YOU WHAT YOU WANT TO SHUT YOU UP. YOU JUST HAVE TO FIND A GOOD LOUD WAY TO SCREAM. I could come over and we could lock down police freq. till they give it back,, just kidding.

What were you expecting from ham radio ?
I still get a thrill everytime I make an hf contact . Whether its a
new country with my qrp rig, or an alltimer qro.
I also have many enjoyable qso's with many fine people.
It's not fast cars , old whiskey and fast women, but I wasnt expecting that
from ham radio.

19. mods for IC-551, 6m ants

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-01 21:22:26 UTC
From: hduff@humnet.westonia.com
Message-ID: <7713-320518003@humnet.westonia.com>

If> I'd like to hear people's comments on the importance of polarity in 6M
If> antennas. So far, the comments have ranged from "critically important" to
If> what". The 6M scene here in Milwaukee, WI seems to be pretty evenly split
If> between SSB and FM. The only VHF antenna I currently have up is an Icom
If> discone.
If>
If> TNX ES 73,
If>
If> Rick WB9GYT
If>

Hi Rick... As you are well aware, the convention for V/UHF SSB/CW is
to run a horizontally polarized antenna, vertical for FM.
Now, If you plan on operating all modes but only want to run 1 antenna
then I strongly suggest that you install a horizontal antenna.
The polarity would be most appreciated in the favour of SSB/CW weak
signal work whereas you will get reasonable performance on FM.
The other way around, (using a vertical) would work well on FM but
poor to marginal on SSB/CW. When the band opens up you will have the
most fun on SSB/CW with a horizontal antenna. FM DXing is done on a much
lower scale than the other modes.
I'd pitch the discone and get a 'real' antenna for the specific bands
you plan to operate on. The discone is a good wideband scanner
(receiver) antenna but offers marginally acceptable performance on the
Ham bands. I'm not an antenna expert by any means...these are just my
suggestions through experience.

Re: the IC-551...there are not too many mods for this rig. (Absolutely
no frequency expansion mods...50 to 54 Mhz ONLY !) There have been
published mods on interfacing switching circuitry for amplifiers and
adding RF pre-amps but not much other than that. The 551 is a great rig
otherwise ! I owned one before I got the FT736. The 551 is a
reknowned classic to many 6M contesters. Enjoy it as-is ! It's a real
performer.

26. Can Motorola Spectra Work on 900 MHz Ham Band?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-02 01:43:52 UTC
From: rkmorrow@aol.com
Message-ID: <3e7loo$dmm@newsbf02.news.aol.com>
Source record: 221508

I bought a 900 MHz trunked Spectra (Model D27KGA5JB5DK) at a Hamfest, hoping that it could be programmed into the 902-928 MHz ham band. Although the programming software that I obtained from Motorola shows a "global" frequency range for the 900 MHz Spectra that includes this band, my particular model has only one conventional channel that will accept only frequencies in the 935-941 MHz range for transmit or receive. The other channels are all trunked and the software refuses to allow me to modify the data without accessing some kind of national Motorola trunking database. My questions are these:

1. Is it possible to defeat the trunking lock-out and convert these channels to conventional channels that I can program?

2. Is there an easy way that I can program the radio into the 902-928 MHz band?

Thanks.

Source record: 221511
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I'm building the FX440 FM transceiver, and so far I have no complaints. Oh, I was missing a 100 ohm 1/8 watt resistor and a .01 ceramic cap, but I might have lost those upon opening. Anyway, a trip to RS and about two dollars (I picked up some other parts to round out my parts box) and I fixed that. Yeah, I guess that I was disappointed a bit because of the missing parts, and suggest that Ramsey could do better. However, all of the important ICs, transisters and specialty parts were there, so I can cut them some slack.

I was interested in a radio that would support 9600bd for the TCP/IP network here. The TEKK 440mhz data rigs are cheaper, but I wanted a way to blow off some steam and get light-headed from solder (Heh). You don't build the TEKK either, which could be a blessing, depending. Anyhow, the price and some recent articles in Comm. Quarterly piqued my interest, and I purchased the FX440.

Here's my impression:
1. I found the instructions to be complete. Not as glossy as Heathkit (R.I.P.) but plenty good enough for a blurry-eyed, time-short, attention-deficit thirty-something computer network nerd to follow.
2. I appreciate the design of the unit. I learned something building it. I am thinking how I can kit-bash the thing for a data-only homebrew radio.
3. The components seem to be of good quality. The circuit board is thick and also of good quality.
4. Each stage has worked as promised.

Bottom Line:
I have had hours of enjoyment building this kit. I had NO feeling of remorse when I ordered and received the box in the mail. I have had no problems so far. I would purchase a similiar kit from Ramsey, and recommend the FX440 440Mhz kit.

Modifying a radio for out of band transmit is NOT illegal!!!
USING a radio out of band is illegal!

I have an old Yaesu FT-101 that was modified for 11 meter operation
by a *former* ham, he got caught using it on 11 meters.
I purchased the radio from him just before he was arrested. I didn't
know that they were after him, I thought he just needed the money.
Anyway, the FCC took the radio as evidence but returned it to me
after the trial some ten months later. I was told by the FCC attorney
that the radio was not illegal for me to have or use as long as I didn't
use it on frequencies where I was not authorized.

31. ICOM IC-A2 battery pack?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-02 13:25:55 UTC
From: bigbee3@bcfreenet.seflin.lib.fl.us
Message-ID: <3e8ut3$cgl@bcfreenet.seflin.lib.fl.us>
Source record: 221512

I am a pilot and use an ICOM-A2 aviation transceiver as a backup radio in my plane. The battery (nicad) pack that came with it has reached the end of its life. I was told that non-aviation packs are interchangeable with this unit and are available at cheaper prices. The battery I have is designated IC-CM7. The specs claim that the output voltage for the transceiver can be between 12 and 15 volts.

My question is this: Does anyone know if I can use any other packs on this unit than the aviation ones and where is a good source for them. Oh, I have been quoted $100 as the price for the aviation battery.

All of my aviation contacts recommended contacting the amateur radio community for the best advice. Thanks for any help or advice.

Bob

Try running it at 100% into a 40 ohm resistor. This should produce about
a 2:1 SWR. See if it overheats. If you have a spectrum analyzer, run it
as it overheats to see if it gets dirty as it gets hot. This is how I test
my
new stuff. Run it full out just above the specs. Its still in warranty,
test
it real well!

36. Improved RX = PIN diodes

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-02 16:32:45 UTC
From: hduff@humnet.westonia.com
Message-ID: <7714235746301@humnet.westonia.com>
Source record: 221517

I just read an article in the July/August issue of QST that talks about replacing the front-end diodes in modern HF transceivers with PIN diodes to improve second order IMD. ("Key Components of Modern Receiver Design -Part 3")
The mod was performed on the TS-50, TS-450, FT-890 and IC-765.
The IMD figured increased dramatically ! The author however does not go into detail to explain which diodes are changed and the part number of the PIN diodes that replace them.

My TS-690 (TS-450) suffers from front-end overload so I'm interested in performing this mod to improve the situation. I'd like to try it on my TS850 too.

I wonder if anyone has any further info on this PIN diode mod ?

37. Tuner mod on RX !!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-02 16:32:45 UTC
From: hduff@humnet.westonia.com
Message-ID: <7714235749102@humnet.westonia.com>
Source record: 221518

Here's a little tidbit to enhance reception on modern HF transceivers
with built-in antenna tuners..
Apparently built-in tuners are only inline during transmit. A mod to
have it inline during receive also can improve the selectivity
(obviously) and possibly bring received signals up by a few db depending
on the mismatch between the rig and antenna.
NOTE It is not recommended to perform this mod if you operate in
split-band mode (ie..10M RX and 15M TX) since the tuner will constantly
be hunting during keying and unkeying.

See the July/August issue of QST "Key Components of Modern Receiver
Design -Part 3"...they speak about this ! Also in the same issue
"Hints and Kinks", is a mod to perform this on the Kenwood TS-450.

38. Problems with Kenwood TS-830

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-02 16:49:00 UTC
From: BRICKEY_PETER@Tandem.COM
Message-ID: <199501020850.AA11577@comm.Tandem.COM>
Source record: 221521

Hi;
I am having some problems with my TS-830 and wondered if anyone had any suggestions.

Sometimes when I power it on the VFO does not come on (display is blank and receiver does not work). After about 5 minutes or sometimes if I hit the PTT it will come on. At other times after the rig is first turned on the VFO comes up, but will jump up/down several KHz around the the tuned in freq. This also will occur when I key the transmitter.
After about 5 minutes the rig will calm down and work OK.

I called the local Kenwood fixit shop (Robert Hall Electronics, San Jose) and they said the problem was due to a faluty VFO and it must be replaced (It seems to me more like a TR relay problem). Before I put out a couple of hundred dollars, I would like to know if anyone has a suggestion.

YAESU 9600 FOR SALE IN MINT CONDITION

THIS 9600 HAS BEEN MODIFIED & IMPROVED BY EEB. IT IS AN ALL MODE HF/VHF/UHF DC-905 MHZ COMMUNICATIONS RECEIVER, WITH AN INTERNAL CONVERTER FOR DC-60 MHZ. TRIPLE CONVERSION AMN AMW FMN FMW LSB & USB. IN PARTICULAR, THIS RADIO HAS EXCEPTIONAL SENSITIVITY IN THE CELLULAR BAND, AND IS SMALL & LIGHTWEIGHT. 100 MEMORIES IN 10 SCAN BANKS. THIS UNIT NOT ONLY RECEIVES STANDARD FM & TV, INCLUDING SOME CABLE TV. THERE IS ALSO AN OPTION AVAILABLE FROM YAESU (APX. $25./$30.) TO RECEIVE VIDEO FOR OUTPUT TO A TV, AND ACCESSORY KITS AVAILABLE TO EXTEND THE RANGE UP TO 1300 MHZ, AND/OR ADD MORE MEMORY.

THE UNIT INCLUDES THE VHF/UHF WHIP ANTENNA, POWER CABLE, RS-232 SQUELCH DETECT INTERFACE CABLE FOR IBM/COMPATIBLES (EASILY MOD FOR ANY COMPUTER), SCANCAT PRO COMPUTER CONTROL SOFTWARE, MANUALS, & MOBILE MOUNTING BRACKET.

PRICE: $495.00 /MONEY ORDER, CERTIFIED CHECK, OR COD
INCLUDES SHIPPING CONUS

REPLY BY E-MAIL, & INCLUDE PHONE NUMBER FOR PROMPT RESPONSE. 73'S

: Try running it at 100% into a 40 ohm resistor. This should produce about
: a 2:1 SWR. See if it overheats. If you have a spectrum analyzer, run it

Ideally, the SWR is 1.25 to 1 if the resistor is ideal. We get a 2:1 SWR
by paralling a pair of 50 ohm dummy loads or attenuators (a termination
isn't needed on a 30 dB pad). In practice, the SWR is higher due to the
use of real, non-ideal resistors, but you didn't specify a particular
resistor type and method of wiring (which can be important at 2 meters).

Hi!

Trying to find info about packet radio software and/or hardware for
the Macintosh.. everything I see seems to be IBM-based. I can understand
this, since the Mac has never been popular with the hams, unfortunately.

Hopefully, I'm not posting this in the wrong place. If there is a
newsgroup devoted to packet, I haven't found it.

Thanks and 73

While one would be caught dead saying the Nissan Altima and Infiniti G-20 are similar cars, the G-20's ECM is under the ash tray, in front of the shift lever. Strange, but just above this is the bay for the factory's in-dash CD player. Strange because CD players are AWFUL electrical noise makers. So I mounted the front panel of my Alinco DR-600 there. Put the RF deck in the trunk.

: 1>
: 1> Hi, I have a few questions about the afformentioned radios.. Co
: 1> someone please give me a price of each? And the frequencies and
: 1> of each? Thank you, any help is appreciated...

: The MOST important difference in the FT51r and the FT530 is
: SIZE!! I didn't see that mentioned in any of the previous replies.
: I have a 51 and have had a 530. There are a few differences beside
: those already mentioned. The 530 can be configured to monitor the input freq by
: depressing the small button under the PTT switch, can be modified for 800mhz
: RX, has a clock, and therefore alarm
: times to turn the rig on and off. None of these features are found on the 51,
: nor are they missed. The difference in size is enough for me to choose the 51.
: You can put it EASILY in your pocket or
: purse which makes it very handy. Additional features on the 51 include
: alpha-numerics, the ability to store names for freqs and display BOTH the freq
: in the upper portion of the display and the name in the lower, spectra-scope,
: to monitor adjecent activity and
: find busy freqs, built user in help via alpha prompts which scroll
: across the screen, and CW decoder! You can set this one up to talk to you in
: CW. It will decode incomming MSG's (alpha-numeric) and
: play them as received in CW!! You don't thae to be WATCHING the radio for MSG's
: (if you use this feature). Any more questions please ask! Hope this helps!

I bought their Keyer - limited functionality and some missing parts.

You get about what you pay for and if you're willing to debug, experiment, substitute parts. etc. Ramsey will do fine. If you want reliability and don't feel comfortable experimenting, I would suggest Oak Hills.

Message-ID: <3eanlt$jq1@gaia.ucs.orst.edu>
Source record: 221543
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.shortwave

Hello All,

I have for sale an Icom 24at dualband handheld. I am selling this
radio to upgrade to a more expensive handheld.

Included with the radio, I will include the charger and the original
papers and box (if I can still find them). I will also include the
original stock rubber duck antenna, however, you will want to go and
purchase another one right away. The stock antennas aren't very good.
Also, I will include two battery packs. The first is the stock battery
which is 7.2V @ 700mAH. The second is 7.2V @ 1000mAH.

Again, if I can find them, I will also include the factory diodes
necessary to modify the radio's extended transmit and receive
capabilities along with the directions.

I am asking $270 for the package, and I will ship via UPS ground.
If interested, please e-mail.

63. Ten-Tec Paragon II vs. OMNI-VI

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-03 11:49:30 UTC
From: morawski@starbase.azrael.mitre.org
Message-ID: <MORAWSKI.95Jan3064930@starbase.azrael.mitre.org>
Source record: 221544

My understanding is that from an operating standpoint the two are nearly identical. However, if a general coverage receiver is not important to you, I'd go with the OMNI--it as been optimized for ham bands only operation and the receiver gets rave reviews.

By the way, the service from TenTec is fantastic. On 24 Dec I slipped with a test probe and toasted an IC in my Paragon. (Yes, I know, curiousity killed the cat). I called TenTec on 27 Dec. to order the chip, and I had the rig back on the air on 29 Dec! They charged me $6, most of which was for U.P.S. shipping! I also use a Scout.

Evidence has developed that people using handheld cellular telephones
are subject to developing brain cancer from the exposure to cellular
frequency RF energy. How much shielding (in the form of a helmet) would
be required to protect the head from the rf energy radiated from the
cellular phone? Ditto for handheld 2-way radios? Thanks.

Andy,
It is either under the passenger's seat or just in front of the passenger's door near where they put their feet. There should be a little "kick panel" there. If there is, then that is most likely where the computer is.

: Lets not forget the smoke coming off the tip of your soldering iron
: contains lead, which you REALLY DON'T WANT TO BREATHE.

Speaking as a chronic asthmatic who handled (that is, edited and prepared for publication) the March 1991 *QST* article "Making Soldering Safer" by Bryan Bergeron, MD, NU1N, I can give a bit more background.

The bad thing about breathing solder smoke isn't the lead. Per Bergeron, emission of lead-bearing vapor isn't normally a problem at temps below about 1800 degrees F. The main concern with lead is that it not find its way into your mouth, which it can do if, say, you're soldering while simultaneously eating finger food or smoking.

What's bad about solder fumes -- and I can get pretty autobiographical about this -- is the *flux*. The *collophony* flux of "electronic" solder can be a potent allergen. Despite its pleasant piny scent, it can cause lung inflammation and bronchiospasm that can lead to breathlessness and wheezing. It can also cause contact dermatitis -- itchy, red, puffy skin and eyes, stuffy nose, the works.

It all depends on the person (senstivity varies with the person), the degree of exposure, and the length of exposure. Sensitivity can increase over time; you can be *sensitized* through repeated experience. (This can happen to factory workers, for instance, and inveterate weekend solderers. I'd be surprised if this wasn't an issue among workers in stained glass.)

As for acid-based fluxes, which are standard in plumbing and stained-glass work -- well, breathing acids and bases can mean rapid respiratory problems for *anyone*, allergies notwithstanding. Lungs just don't like being burned.

Bergeron suggests effective, low-tech ways of making soldering safer -- good ventilation, breathing through a respirator -- so I won't go into the details here. The main thing I wanted to do was point out that lead isn't necessarily the main health issue in soldering. And yes, "secondhand soldering" is an issue, too.

See my reply to ur first post....
also the remote head is just a cable and connectors to remove the front
panel of the 747 and remote it .. kit is only cable and connectors etc.
use same front panel. I havent put mine mobile yet but I prob will
soon.. cul 73 mike

Do yourself a huge favor - go to the dealer and buy the factory service manual. That way you will have all the same info that the "factory trained mechanics" have. When they try to tell you that you need to spend a gazillion dollars to have your fligamagibbet replaced, you can look up in your manual and find out if you're being BSed. Plan to pay about $50 for a factory manual.

PS - lots of the ECUs are in the passenger footwell inside the outboard plastic covers.

From: helliott@losat.redstone.army.mil
Message-ID: <3ec1ue$pc3@ra.nrl.navy.mil>
Source record: 221454

I have a new TM 733A. I think it may have a problem - let me know if yours does this -

Put the radio into the "remote control" mode where it is controllable via the DTMF tones or the DTMF keypad on the microphone. Place the microphone "lock" switch in the "lock" position. Do any of the DTMF buttons still function when in the lock position? Most of mine do - all four of the letters and the numbers 0 and 3. Do all of these machines do this or does my microphone have a problem?

Its kind of a pain - my kids are constantly bumping the microphone with their feet and sending the rig into some unpredictable mode - even with the blasted "lock" on.

Text item: Text_1

> I'd also like to hear how your Ten-Tec 6M transverter works out for
>you. I cought the ad for it in a past issue of QST..couldn't believe
>the prices...$95 was it ?

I'm in the process of building one too... In the back of the manual it says something to the effect of "you get this transverter at a great price because -- well -- the people here at Ten-Tec just happen to like 6 Meters!" Marketing ploy or truth? You can decide. I can say I've gotten much less for the money over the last 20 years of kit building. It's a great kit complete with a pre-punched metal cabinet worth half the price of the kit.

The board could be fancier, but it's not bad. The parts are not only all there, they're better than average quality. The manual is good. I rate the whole kit as well above what you'd expect for $100.

I finished the recieve side this weekend and listened around some. Works great! Now for the transmit side (before the January 'test....)

These guys may be the next Heathkit.

Get a small cooling fan and mount it in front of your soldering area to
exhaust the smoke from the soldering area... They are $5.00 at most
hamfests and a great investment...

I have seen someplace a fix for this, probably a QST Technical Correspondence
hint, or something similiar. Try calling Craig at Kenwood service, they can
probably fax the service bulletin to you. I believe all that is wrong is
a missing ground. You fix it by putting lockwashers under some screws, but
not sure where. Don't let them sock you for a new VFO! Tyler N4TY

81. Questions about TH-78A

I am considering buying a used TH-78A and have some questions.
(I am new to ham, got my liscense two days ago, and know very little)

Can this radio be used for packet?

Can this radio be modified to receive/transmit out of band?

Are there any essential features missing on this radio?

Are there any bugs/problems associated with this radio?

What would you consider a fair price?

84. TH-27A

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-03 20:45:03 UTC
From: johnkg@bnr.ca
Message-ID: <3ecd0f$hg5@bmerhc5e.bnr.ca>
Source record: 221476

I have a Kenwood TH27A 2m handheld which is displaying intermittent operation. About 5% of the time the transmitting frequency is approximately 180 MHz, and holds there. On release of PTT, the VCO returns to the proper frequency, and Rx operates. (There are several more bizarre failure modes which are less likely.)

This problem does not appear to be caused by a bad connection. Does anyone know of any design problems and fixes to explain this?

Please email me directly (and post too if you wish) as the server here has a limited capacity and articles soon get deleted before I can read them.

Thanks,

John.

89. Wanted: 4mm coaxial connector for Yaesu FT530

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-03 22:28:54 UTC
From: raiman@vnet.ibm.com
Message-ID: <D1up46.12Ls@bocanews.bocaraton.ibm.com>
Source record: 221477

I am in search of a source for the 4mm coaxial power
connector for my Yaesu FT-530 2m radio. Yaesu sells
one for considerable cost which has the wire molded on.
I want just the connector so I can make my own cable.

I've tried Radio Shack and a few local parts stores with
no luck.

4mm is the outside diameter (O.D.) and my best guess
for inside diameter is 2.5mm. My calipers don't fit
inside to get an accurate measurement.

91. DC/Balt. TT 6m xvtr purchase?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-03 23:08:59 UTC
From: ham@wam.umd.edu
Message-ID: <3ecleb$sm3@cville-srv.wam.umd.edu>
Source record: 221461
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I am currently considering purchasing one of the Ten-Tec Model 1208
6 meter transverter kits, available only from Ten-Tec for $95. I
called them up to see if, maybe, it would be possible to get a
discount on a multi-unit (like 10) purchase, and was told that their
price was already as low as it could go.

HOWEVER, their charge to ship a single unit is $5.00. To ship 10 of them
would put it into the $10.00 shipping ballpark, and would save a LOT of
packaging and effort on the part of many. So, before I make an order,
does anyone feel like saving a buck or two, and saving a few cardboard
trees at the same time?

Thanks,

Larry,

Try FTPing to,

ftp.demon.co.uk /pub/ham/mac

you'll find all kinds of Mac Ham software in there including
several Packet Radio programmes.

If you need any more info let me know.

Regards,

Sean.

Well I have a 530, I told this other guy that he could buy it and we was
interested but I haven't heard from him in a while so I might just assume
that he doesn't want it. There's a problem, however, I live in Montreal.
I'd sell it to you for 500$can (the Canadian dollar is quite a bit weaker
than the American right now) but I'm not sure how I'd get it to you. It's
in great condition, I hardly ever used it, and I still have just about
everything that it was sold w/; manuals, charger, the only thing that I
don't have is the box.

-> Does anyone have any insight to the quality of the radio kits
->produced by Ramsey (sp?) Electronics?
-It is very nice to have any company that provides kits for the builder.
-Ever since Heathkit stopped making kits, its been a big vacumn for builders.
-Ramsey has a reputable name, a new modern factory, and the latest wave
-soldering machine.

I have built a few Ramsey kits, and I would recommend avoiding them. In my experience, the designs are poor, parts quality varies (I guess 4.7 uF non-polarized lytics were on surplus sale - yep, they can sometimes be used instead of 10 uF polarized ones), and tuning instructions are non-existant. Assembly instructions are pretty good, but if you are building a transmitter, make sure you put it on a spectrum analyzer before feeding an antenna. My 2M kit had spurs out of the band, and the TX came on before the PLL locked, so it swept. And the squelch *still* thumps...

Look into Ten-Tec's line of kits. They are very nice (but a few of them are still being designed - the 2M xcvr and the 9-band SW RX).

/mike

BTW, what does having a wave-soldering machine have to do with the quality of their kits?

This is a big issue right now in the Cellular industry. Motorola wants
studies showing this effect repeated. There have been enough industry
magnates killed by brain cancer that I personally am no longer
eager to use any handheld radio transmitter when the antenna is right
next to my head - hence the question of what kind of shielding I would
need in a helmet I might wear to protect myself from the radiated
energy. One advantage of the helmet is that the antenna can be mounted
on the top of it.

>
>Mark AA7TA

I think the "evidence" is the ONE lady in Florida that "developed a brain
tumor because she was using a cellular phone."

TRUE: RF energy does cause heating in animal tissue. The hazard
increases with frequency and peaks at about 2500MHz and
then sharply drops off due to the lack of penetrating power
of the upper microwave frequencies. However the eyes are
sensitive up into the 100GHz+ range.

However, the milliwatt levels of handheld cellular phones are a
miniscule hazard. I doubt that the heating could even be measured
because the blood moving through the tissues dissipates the heat as fast
as it is generated. The hazard might be in the old suitcase cellular
phones that generated 3 watts at waist level. I guess if you carried one
of them on your shoulder (like a boombox) you might have a problem.
As far as amateur gear goes there are a few simple rules:

1. NEVER operate you rig or amp with the cover removed.
2. NEVER stand near an antenna that is being driven at
high power.
3. NEVER point a UHF yagi or microwave disk/horn at anyone.
(You can use them to cook your hotdogs on field-day)

I'm looking for 4mm power connector plugs and can't find them anywhere. Radio Shack has one but it comes with half a dozen others in a universal power supply pack - don't need all the other junk. I want to make a DC plug for my FT416 handheld.

-Brian

121. Re: Astatic D104 Mic Pre-amp

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-04 16:48:22 UTC
From: Grant Youngman/NQ5T <72567.2670@CompuServe.COM>
Message-ID: <3eejgm$7vi$1@mhadg.production.compuserve.com>
Source record: 221346

Actually, there are good reasons to use the Astatic preamp with the D-104, especially in modern rigs. Problem is an impedance mismatch between the D-104 and 10-DA cartridges and the typical 600 ohm mic input found in most current rice boxes. It results in significant alteration of the frequency response (particularly the D-104) and sounds lousy and sometimes distorted. The D-104 needs to work into a high impedance load to express any low end at all. Pushing it into a 600 ohm load directly will sound pretty lousy -- all highs, like a Heil DX-4 cartidge only worse. Use of the preamp fixes this little problem and makes for a much better sounding audio characteristic.

Hello, Doc. The lock switch on the back of the mic only disables
the up/down tuning buttons and the and four at the top of the front.
All my DTMF buttons work with the lock in the on position.

I don't know if you have this or not, but I'll go ahead and post it
to the newsgroups as well. Havn't posted it in several months. Document
follows.

Modifications, Undocumented Features, and Bugs for the Kenwood TM-733A.
Release 2.0 Updated October 1, 1994

Updates for Release 2.0 are identified by parenthetical statements.
There is also some new information sprinkled throughout the previous material
either to update it, to correct misinformation, or to be more specific.

This document is a compilation of Internet messages from
Steve Haehnichen KE6JGK and Brad Killebrew N5LJV, edited by Brad Killebrew.

Extended RF Modifications

Refer to diagram below. (Inserted into Release 2.0)

Remove power source from the radio.

Remove the display panel.

Remove the top cover the radio.

Face the front of the radio away from you.

Remove the speaker.

Looking from the back of the radio, the control board is vertically
mounted just behind the front panel wall (which can be removed easily
if better access is needed.)

Just to the right of a chip labeled XRU4066BCF and just to the left of
two green wires (B2 & B3 which are draped over the board to the rear) are
two zero-ohm SMT resistors, B0 and B1, marked "000".

Remove B0. (the one on the left - furthest from the green wires)

Taking it out might be a bit tricky. It's glued down for surface-mount
assembly. Be careful not to pull the trace from the board.

Perform a CPU reset by holding [MR] while turning on the radio.
It will then ask if it is "OK?" to reset, press [MR] again.

The ranges after modification are as follows:

Tx: 136-174 410-470
Rx: 118-174 300-470

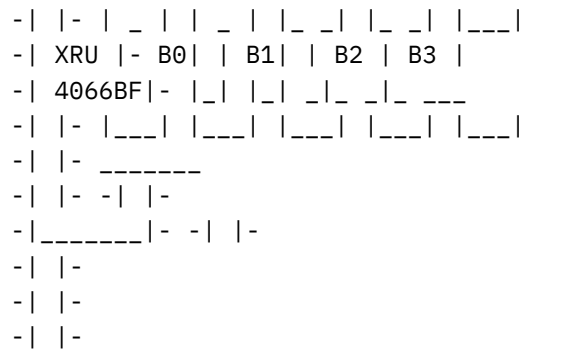
The cellular band is indeed missing.

ONLY Removing Jumper 1 (B2) is the MARS/CAP modification.

** Diagram of specified area on Control Board **

EDGE OF BOARD, viewed from the rear, looking toward front panel

Green jumper wires (B2, B3)



```
-| |-
-|_______|-
```

The jumpers are actually soldered on the other side of the board,
but the loops come up over the top and hang over the B0/B1 side.

B0=R414
B1=R412

Here's something interesting! According the Kenwood rep I spoke to,
performing this mod *does not* void your factory warranty. The same
goes for any Kenwood published service bulletin or modification info.
We are encouraged to perform the repairs ourselves to save them the
trouble and expence.

DTMF Remote via Microphone

The TM-733 is fully DTMF remotable via the microphone (documented).
The radio can also be externally DTMF controllable with an HT, but that
will be described later.

The DTMF control keys are exactly as shown on page 81 of the
manual. Note that the microphone is active all the time, so any
ambient DTMF tones near your mic will also change rig settings. This
includes tones coming in on the other band and out the speaker.

Cross Band Repeating

Cross band repeat isn't documented but comes ready from the factory.
To enable cross band repeat from the front panel, first select a band
by pressing BAND SELECT. Then, change the control to the other band by
hitting [CONT SEL]. Next, press [F] for one second, then the "X" button
(far right side). Decimals will appear between the Kilohertz digits, and
the "ON" indicator will light momentarily. The microphone sequence to
enable cross band repeat while in remote control mode is "DC".

The transmitter hang time can be toggled between 500ms to 0ms by
turning on the radio with [LOW] pressed. They also recommend enabling
the Time-out Timer, for obvious reasons.

Note that the TM-733 can also be used as a "one-way" cross-band repeater.
For example, if you can receive a distant repeater with your HT, but have
difficulty getting into it, you can use the TM-733 to boost your transmitted
signal. To set this up, just omit the part where you "change the control
to the other band by pressing [CONT SEL]." Doing this will setup the TM-733
to repeat your signal to the other band, but will not retransmit the distant
station back to you. If this sounds ambiguous, play around with it a little
and it will begin to make sense.

DTMF Paging and Squelch

The DTMF Paging & DTMF Squelch protocol (AAA*BBB) is compatible with
the Yaesu 530 and all Kenwood radios supporting this.

DTMF Monitor

There are some serious bugs in the "DTMF Monitor" feature (Page 63:
[PTT] + [DWN] + Power On). This feature supposedly lets you hear the
DTMF tones you are transmitting. The first problem is that it only
gives you a short tone from the internal speaker. This is not true to
the transmitted tone that lasts as long as you hold the key. The much
bigger problem is that it mixes the desired tone and the feedback tone
resulting in an almost indecodable DTMF tone. Kenwood is aware of this bug.

(Updated information for Release 2.0):

Per Ricardo, a Kenwood technician, they are aware of this bug and are
working on a fix. No details yet.

Front Panel

There are two undocumented icons on the display; one is the "heart"
symbol. Anyone know what that's for? It could just be a spare. I
noticed they used the odd "spade" symbol to indicate AM receive, so
maybe these were last minute extras. Dunno..

From looking at the schematic, it seems that the only programmable
memory is physically located in the detachable front-panel. I think
this means that if I use my front-panel on someone else's radio, I get
all my memories and settings. Anyone try this?

The whole front panel is connected to the rig by four wires (yep,
including the volume/squelch pots.) According to the schematic, these
are: power, ground, data in, and data out. I'm wondering how hard it
would be to make a PC interface for this thing and replace the whole
display and controls with a full-screen version. It wouldn't surprise
me if many of the programming limits were also imposed by the
front panel, and not the unit.

Wireless Cloning

The advertised but undocumented Wireless Clone function is described
in App Note AAN-0008 which they will mail out on request. (Maybe if
enough people ask for it, they will include all the functions in
future instruction manuals.) In summary:

- Prepare the two radios for simplex operation on the same frequency.
- Turn both radios off
- Press [CALL]+[SHIFT] + [Pwr On].
- This should place the radios is clone mode with "CLonE" on the display.
- Press PTT on the "Master" radio momentarily. This will start
sending the programming DTMF tones.
- After all data has been transferred, the display of all radios will
read "End", indicating success.
- If the signal is interrupted or corrupted, the "Slave" displays will
read "Err". Turn them off and try again.

Notes:

- Both the Master and Slave radios must have the same number of
memory channels available for each band. Example: You can not clone a
stock Master to a Slave with ME-1 memory expansion.
- You can not clone between different Kenwood radio models, even if
they seem identical.

Be careful when using the clone feature. It has been known to wipe out
or scramble memories on the master radio during or right after clone.

Bugs and Problems

To date, I have logged two trouble reports with Kenwood.

The first is the well-known problem with the transmitted PL (CTCSS) tone.
The tones are filthy. They contain many harmonics and synthesis noise.
I'm guessing this is because they are using 7-bits from the CPU and a
resistor net (DAC) to synthesize the tone. The sound/intensity of the
noise depends on the actual frequency being generated. The PL tones also
come out of the radio's speaker while transmitting. Weird, but not a problem.

The PL noise seems most messed up (on my radio) at 107.2 Hz, where the
noise beats with the tone. Go simplex and ask someone to describe the
noise to you, or listen carefully to your own speaker while
transmitting. Some repeaters do a better job than others of hiding
the noise for you.

(New information inserted into r2.0):

==========
Transmit PL Fix
==========

Kenwood just released a Service Bulletin to address the transmitted PL
tone noise on the TM-733A. (Yeah!!) Call the Kenwood Service
Dept. (1-310-639-7140) if you want a hardcopy. Here's a summary of
the text. Use it at your own risk. If you are going to get into your
radio with a hot iron, you should first get the real paper from
Kenwood with the drawing.

Kenwood Service Bulletin #ASB-1060 2 Pages
Subject: TM-733A PL Tone Distortion August 30, 1994

Symptom:

Transmitted PL tones at the receiving station have a relatively high level of distortion. This is easily seen when the incoming signal is viewed on an oscilloscope.

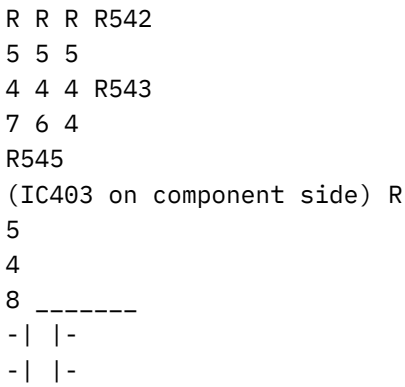
Countermeasure:

Change the value of the "Pull-up" resistors in the PL tone encoder circuit as shown in the accompanying chart and illustration. This reduces the distortion from around 9% to approximately 4%.

Part	OLD value	NEW value
R542	1.8k	2.7k
R543	1.8k	3.3k
R544	1.8k	4.7k
R545	1.8k	6.8k
R546	1.8k	10k
R547	1.8k	10k
R548	1.8k	10k

Procedure:
----
1. Disconnect the power cable, microphone and antenna's, etc.
2. Detach the front panel and set it aside.
3. Remove the top and bottom covers.
4. Remove the speaker and speaker mounting bracket.
5. Disengage the plastic front panel from the main chassis.
6. Carefully disconnect the two ribbon cables from the Tx/Rx unit C/4.
7. Remove the two Phillips head screws that secure the Tx/Rx unit to the chassis.
8. Turn the circuit board over and replace the resistors using the parts list and illustration as a guide.
9. Reverse steps 1-7 for reassembly.

TX-RX Unit (X57-4360-00) Foil Side View



```
-| |-
-| IC402 |-
-| |-
-| |-
-|_______|-
```

Caution: This modification requires advanced surface mount soldering equipment that is rated for CMOS circuits. It also requires familiarity with advanced surface mount soldering techniques. If you do not have the proper equipment or knowledge do not attempt this modification yourself. Seek qualified assistance from your closest Kenwood Service Center (Long Beach, CA, or Virginia Beach, VA).

The Service Manual specifies a test for the PL. The technician is simply required to verify that any one PL tone is between 500 and 1500 Hz deviation. This is quite a wide tolerance range! The "standard" PL tone deviation should be 750 Hz. Twice that strong might be too strong and become audible. There are no trim-pots on the PL deviation, so I'm guessing that the deviation is pretty constant from radio to radio.

The dirty PL is definitely found on early models, but we have had many reports that the PL problem has been fixed in newer versions of the radio. If you purchased your radio after September 15, 1994, (or your serial number is greater than 55000000) it's a good chance that you may not have the PL problem.

The other problem concerns the DTMF Confirmation Tones. This feature is off by default (I wonder why :), while it seems pretty useful. To turn it on, press [PTT] + [Down] on the microphone while powering the radio on. This will generate short DTMF confirmation tones whenever you send DTMF over the air from the keypad. Unfortunately, it mangles the beginning of the outgoing DTMF tone! This is serious enough that most local repeaters can't detect the tone, or count it as two tones.

Get a receiver and listen to what you are sending out when the Confirmation tones are enabled. It sounds to me like they may be mixing the confirmation tone in with the real tone and getting some destructive interference. Just a guess, though.

I called a Kenwood technician (Ricardo) and worked with him on the phone to reproduce the problem there. So, as of today, this is a Known Problem, and they are looking into a fix. :-)

I am really curious to know what they would say if other folks called up and complained about this problem. Would they deny hearing about it, or would it really be a Known Problem? Might give some insight into the PL-noise denial thing anyway. :-)

Personally, I'm much more concerned about the noisy PL than the DTMF confirmation tones, since I can just shut those off and pretend that feature doesn't exist. If enough people call about the PL problem, maybe they will come out with a real fix and offer it under warranty to all the radios out there (since they're all pretty new). My guess is that it will involve a free TSU-8 tone decode module, but don't hold your breath. :-)

External DTMF Remote Control

The following procedure places the 733 in External DTMF Remote Control.

Note that this mode is different than DTMF Remote Mode. This mode concerns the control of the 733 with an HT, and not the microphone.

- Press Band Select and select the UHF band.
- Pick a UHF control frequency.
- Turn on the UHF DTSS function and select a tone sequence. (p. 89)
- Turn the UHF DTSS function back off.
- Press Band Select to move to the VHF band.
- Press [CONT SEL] to move control back to the UHF band.
- Turn OFF the radio, press and hold [CONT SEL] while turning the radio back on, then release [CONT SEL]. The S-meter scale and the DT indicators for the UHF band will begin flashing. The LOCK indicator will turn ON, and most front-panel keys (except PWR) will be disabled.
- To begin remote control, you should key the external radio and press the following key sequence: "Axxx#" where "xxx" is the preset DTSS code selected earlier.
- If the proper code is received by the 733, the beeper will sound and the DT indicator will stop flashing. The radio can now be remotely controlled using the function chart below.
- To return to standby mode, press "A#" on the remote radio.
- To return the radio to normal operation, turn the radio off, then press and hold [CONT SEL] while turning the radio back on.

Refer to this chart when using the TM-733 in "External DTMF Control".

1 2 3 A
T.ALT ON TONE ON CTCSS ON ENTER

4 5 6 B
T.ALT OFF TONE OFF CTCSS OFF TONE SEL

7 8 9 C
CALL VFO MEMORY REPEATER ON

* 0 # D
DOWN POWER LEVEL UP REPEATER OFF

There are no "shifted" functions. Just one function per button. After you hit "B" for TONE SELECT, press * or # to go up or down, and same is true when in VFO mode or in MEMORY mode.

Tones 7, 8, and 9 mimic the three buttons at the top of the 733 mic.

Pressing "C" places the radio in cross band repeat mode. You will
recognize this because of the dots between Kilohertz digits.
After pressing "C", put the radio back into standby mode with "A#".
The 733 will now cross band repeat. To disable cross band repeat, place
the radio back into the External DTMF Remote Control with "Axxx#".
If you can read through the lines, the 733 is capable of operating
as a frequency agile remote base. Now Kenwood just needs a CW IDer!

Assembly Mode Test

In the TM-733 Service Manual, it describes a test mode that I haven't
seen mentioned anywhere else. So, here's the scoop:

Entering Assembly Mode: [CALL] + [MUTE] + [Power On]
All LCD segments should come on. (To exit, power off.)

Press the [VFO] key. *This must always be done first*
The serial port is checked and "F" with "80" on the display indicates
test passed. "1" or "2" means failure.

Different keys now show different displays, with [LOW], [SHIFT],
[TONE], and [REV] also adjusting the backlight intensity.

Set the dials to minimum, then press the [MR] key. Each of the dials
shows the digitized level.

This looks useful for checking all the keys and dials when you suspect
a bad connection.

----------snip here and print----------

: 3. NEVER point a UHF yagi or microwave disk/horn at anyone.
: (You can use them to cook your hotdogs on field-day)

A 2 ft. dish and 1/2 watt at 10 GHz can generate
an EIRP of 1 kW. Suppose I want to use this to
cook a hot dog.

If it takes 2 minutes for a microwave that delivers
100 watts, how long will it take with a kW EIRP?

It would be nice to have hot food--New England
Mountaintops tend to get downright cold this
time of year (maybe its my thin Hawaiian blood?)

I am afraid this time you really have to buy the Yaesu version.
I got one that was the right size, but didn't have the barrel
shape that Yaesu uses. It makes a fine connection but doesn't
hang on. It slides right back out. $6.00 from Yaesu.
It's the only flaw in an otherwise perfect HT (FT 416).
(and I think the size is 3.5 mm)

Best of luck.

The manual says 4mm in one paragraph, and 3.5mm in another.
I tried a selection of connectors, and found one which fitted ... well,
almost fitted ... the center pin is thicker than the "normal"
connectors.

I gave in and spent a fortune on the Yaesu power cord.

Philip

129. FT51R messaging

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-04 19:47:26 UTC
From: dcameron@unixg.ubc.ca
Message-ID: <3eeu0e$iuc@nnrp.ucs.ubc.ca>
Source record: 221367

I just have a question about messaging on the FT51R dual band handheld from Yaesu.

I have been noticing some very interesting interference on our local repeater system which sound like a series of tones, perhaps DTMF, which are followed by a CW id. I have heard that the FT51R has the capability to send messages and id as well. I decoded the ID and it way far from a callsign but instead a racist slang.

I was wondering if the interference is possibly coming from people sending coded messages to each other via the FT51R or similar model.

I was also wondering if sending messages (coded) is against the Amateur radio code in the United States. I know for a fact, no coded messages can be sent via amateur frequencies in Canada.

I just see the downfall of VHF and UHF amateur radio going to people with handhelds instead of pagers.

Please post any responses to the net.

135. HELP!!! Need MMB For Yaesu Memorizer

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-04 23:24:50 UTC
From: Dave Phillips <dphillips@ips.iac.honeywell.com>
Message-ID: <3efao2$5h0@adm09.iac.honeywell.com>
Source record: 221355

I desperately need a mobil mount for a Yaesu FT227 Memorizer.

These were originaly included with the radio by Yaesu, but seem
to disolve over time. If you have one in your junk box, I would be
glad to pay real $$$ for it. I will even purchase the radio that may
be attached to it.

Please reply via e-mail

Regards

Dave Phillips

WHAT-radio
In article <1995Jan1.171712.28449@ke4zv.atl.ga.us> Gary Coffman,
gary@ke4zv.atl.ga.us writes:

>The FT51RH was totally unusable downtown. Now that's
>only one data point, and second hand at that, but I'd sure want
>to test this rig is a high RF environment before committing to
>it.

I have had the FT51 for almost one month. I have used it from a hill top
location near some paging towers and about 100 yards from a 2m, 70cm and
155 MHz transmtter site. I have not been able to uncover any intermod to
date. I have attached it to a 2m antenna at about 30 feet and still do
not find any evidence of intermod. I'm curious as to what conditions the
report above comes from? external antenna? connection to amp/preamp? etc.

I don't think that the lack of intermod that I've seen comes from any
loss of sensitivity aimed at combatting intermod. I hear others on
repeater inputs quite well, even better than some local repeaters seem to.

My experience with VHF/UHV is limited. This is the first radio I've
owned in the past 15 years. It's been a lot of fun to learn about the
new capabilities these modern radios have.

On the negative side, I would like to have a louder speaker output prior
to distortion for listening in some noisy environments.

You have to run a syncrones inverter to match your phase to the power company's . A few years ago in Idaho (I think) a fellow was refused permission and sued. He won. I believe it was written up in the "Mother Earth News".

The ranger and ranger ll are one of the most popular rigs with the AM crowd. They can be modified to produce almost HI FI sound and make great drivers for a larger rig. I would say $100=$150 with a higher price for a cherry rig.
I have 2 rangers here and use thr Ranger 2 to drive a Johnson Desk KW when I get on AM. I would keep the rig find a old Recver. an put together a vintage 1955 station and have some fun on 80M Am

141. Icom Delta-1A mods needed

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-05 01:49:41 UTC
From: obrien@Aero.org
Message-ID: <3efj7l$bgl@news.aero.org>
Source record: 221373

I need to open up an Icom Delta-1A so that I can go down to 420. I have the ArtSci book but I don't really need to open the thing up from DC to light - I appreciate the protection against fat-fingeredness.

Does anybody have info on which diodes do what? The mod databases have nothing on this model that I've been able to find.

Thanks!

The customized audio response (i.e., hiss) that makes the radio "sound" hot.

Hello everyone.

I have some Andrew 1/2 inch hardline, model FSJ4-50B. I need 2
connectors that will attach to this cable, and allow a male
pl-259 connector to be attached. Anyone have these things,
or know of a source?

Thanks.

Message-ID: <199501050616.WAA11898@ix.ix.netcom.com>
Source record: 221374

I have a 92 Ford Explorer and I installed a kenwood TS-50 with a rear mounted Hustler antenna. When I operate the radio with ignition on, I get noise exceeding S7. I have had the fuel pump fix/mod made by the Ford dealer, bonded rear bumper to frame as well as muffler and I still get S7 noise. Can anyone offer additional suggestions? It appears that the noise is radiated.

Thanx

Tom

DE> Put the radio into the "remote control" mode where it is
DE>controllable via the DTMF tones or the DTMF keypad on the microphone.
DE>Place the microphone "lock" switch in the "lock" position. Do any of the
DE>DTMF buttons still function when in the lock position? Most of mine do -
DE>all four of the letters and the numbers 0 and 3. Do all of these
DE>machines do this or does my microphone have a problem?

Yep, see Page 19 of the TM-733A Owners Manual under the heading LOCK.
"Locks all microphone functions except (PTT) and the DTMF keypad,...."

When in the "Remote" mode the keypad still functions with the LOCK
switch on. Mine does!

This rig is equipped with so many "bells and whistles" it'll probably
take me a year to find them all....if ever!
It does seemingly work very well at 9600 baud Packet.

The biggest complaint I have of the radio is that when operating it
in the car the speaker emits whine from the car's alternator. My
TM-721 has never done that. And Yes, the radios are powered from
leads going all the way to the battery (fused, of course!). But,
I've drifted away from your subject. Sorry!

Source record: 221380

Hello, Yaesu-owners...

My father, LA4KG Bear, has experienced some trouble with his
FT-747GX rig. It has turned deaf in CW/wide, but has still
fb rx in CW/narrow mode. This occurs periodically and some
times after heat-up, say 2 hours after turning the rig on.

Has anyone experienced this kind of trouble and found the
source to it? Any tip on where to look? Does the FT-747GX
have some low quality parts that could be replaced to
improve operation?

Thanks in advance,
73 de 'Offafa' LA4OFA

155. IC-2SAT Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-05 15:11:25 UTC
From: DEVENNEY@VM.TEMPLE.EDU
Message-ID: <1731D8F4DS86.DEVENNEY@VM.TEMPLE.EDU>
Source record: 221382

I used a keyboard combination (obtained from ICOM) to extend the RX coverage on my 2SAT. With the unit off, I held down #, B, and the light button. The good news is that the radio now receives 108-136 MHz air. The bad news is that the offset doesn't appear to work. For example, when I try to transmit on 147.36 the unit fails to switch to 147.96 even though it shows the proper + offset. The unit just beeps and fails to shift frequency. Any ideas on a fix?

156. Satelite Receiver

If you have an interest in receiving real-time images from satelites
read on......

Equipment to receive these real-time images are manufactured in Queensland
Australia. This project began life as a research / recreational hobby by
a team of radio enthusists. The final outcome of the project was a system
to receive real-time images from polar orbiting weather satlites.

Images are available from American (NOAA), Russian (METEOR) and Chinese
(FENG-YUN) satelites as they traverse your geographical area. The
satelites transmit both visible light and infra-red images. Resolutions
vary from 2.4Kms to 5Kms per pixel.

The system comprises a simple omni-directional antenna, a suitable radio
receiver, demodulator card (AD converter) and viewing software suitable
for the viewing and manipulating images on IBM PCs.

An overall system price is in the order of $650 (Aust) with the possible
addition of a mast head pre-amp for $30. Various antenna equipment and
cabling is required and can be purchased for around $15. Detailed
diagrams are included for the construction of the antenna.

Please respond in e-mail if you are interested in obtaining more
information. Parts of the system are also available in kit form.

157. TEN TEC 6 meter transverter parts

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-05 15:17:46 UTC
From: loase@iccgcc.cle.ab.com
Message-ID: <1995Jan5.101746.1@iccgcc.cle.ab.com>
Source record: 221398

I just finished the TEN TEC 6 meter transverter(works great I am very satisfied). In the kit they use some small coaxial jacks and plugs to connect the antenna and tranceiver to the circuit board. I have never seen this type of connection before but it is nice. The ones in the kit are about the diameter of RG-174 coax and the plug or coax end is crimped on while the jack is soldered to the board. My question is, does anyone know where these can be purchased in small quantities as I think they would be great for home brew projects?

Best Regards
Jim Loase WD8RPT

158. DSP's - Do They Work - Whats Best

The non-standard Yaesu barrel plug can be obtained for $2.49 from Radio Shack (for fitting their Universal
Cigarrette Lighter Plug adaptor). The non-standard plug is the same one which is used on Sony portable CD
players. It has a tan/brown stripe color code. Radio Shack can special order it for you.

The wave soldering machine refers to subassemblies in newer kits to come.

Remember, you only get what you pay for in this world, and you don't pay
a lot for Ramsey Kits.

Every one of the Ramsey kits are usable, some need more technical
kowledge than end assemblers can muster up. At least Ramsey is willing
to make it work for the buyer, if the buyer can't do it himself.

Date: 1995-01-05 22:08:24 UTC
From: snoonan@netcom.com
Message-ID: <snoonanD1yDI0.6DI@netcom.com>
Source record: 221419

I found that Radio Shack does have the connector. But it's an adapter and a special order item. The Radio Shack near me had them in stock.

It worked for a awhile, then it would lose power sometimes when the cable was moved.

After tossing them out and getting the real Yeasu cable from HRO. I have had no problems.

Unless you want headaches, just get the real thing.

Yup! This was one of my favorite pet peeves until the problem that I'll describe in my Tale of Woe and Intrique below.

> from time to time after I have pushed the power off button, the
> remote display goes off but the radio itself does not!

Yup!! Or the opposite problem -- which provides an excellent segue into the promised Tale of Woe and Intrigue....

I accidentally enabled priority scan a couple of days ago, and attempted to restore "normal" operation by switching to programmable memory #1, in which I store my preferred default parameters for many features. The instant I pressed <PM>, however, the display state changed to Venusian, i.e. random components of the segmented displays turned on to form some truly creative garbage characters. When I attempted to recover by returning to standard memory mode using <MR>, the display went completely blank except for the primary key labels (Call/Low/Shift/Tone/Rev/Mute) across the bottom of the display and the message "-on-" in the lefthand display area. None of the buttons function now, which means I cannot power the rig off. This, in turn, means that I can't ever perform a hard reset, since that required holding down the appropriate magic button while powering the rig on. (No, holding these buttons down while attaching the control head or supplying power to the rig has no effect.)

> I have discussed both these problems with the Kenwood service
> center. They said they knew of the second

Are you talking about Kenwood's service center, or an authorized third party service provider? I called 1-800-KENWOOD yesterday to ask them about this, but was shuffled off immediately to my local authorized service center. Of course nobody there has never heard of this problem. I've also tried calling the factory in Long Beach at 310-639-5300 but haven't reached anything except a busy signal for the last two days. If anyone knows any magic that will actually get me to some expertise at the factory, I'd sure love to hear about it.

For that matter, I'd be thrilled to learn that there's a hardware reset button located somewhere on the rig. If there is, however, I sure can't find any references to it in the docs.

I think my next mobile rig will be something other than a Kenwood. I was really pretty pissed when Kenwood was unable to replace a stolen control head for a TM-741 less than a year after I bought it. I'm not really sure why I replaced the "headless 741" with another Kenwood, but in light the 733's intermod problems and, now, this little firmware lockout, I'm really having some serious second thoughts about Kenwood's mobile rigs....

> Thanks!

I've had the DR-600T for over a year and it has been a fine performer. The remote cross-band feature works well and signal reports are uniformly complimentary. Receive audio is adequate except in high noise settings (truck cab with the windows down), but which radio is adequate in those settings. The layout of the controls is reasonable and the remote (mic) controlled functions add to the versatility. I've bounced this radio hard and it'll never sell as "like new," but it continues to work well. I am most impressed with Alinco's customer service. I managed to mess up (please don't make me be explicit) the N-connector (not a warranty repair), but they fixed it gratis with 10 day turn around, including shipping.

There are some funky things about the radio, particularly the Additional Repeater Memory (ARM) feature. This permits an additional 10 memory slots for frequencies within a 1 Mhz spread (not so bad an idea). The problem is that the only scan mode I've found in ARM is search and stop on an unoccupied channel. Direct access to programmed memories would also be nice while mobile, but you can't have everything and a reasonable price too.

Actually, the US FCC rules forbid encoding intended to obscure the content
of a message. You can encode a message into morse code, you can encode
a message using RTTY, packet, PKZIP, etc. as long as the intent is to
facilitate communication. Encryption is a definite no-no.

I'm not sure dtmf messaging has been specifically addressed by the FCC, but
unless the FCC says so specifically, I don't see any legal problems with
using DTMF tones per se. Now, if you are somehow coding the text before
sending it, you could be in trouble. If you've come up with your own
nonstandard DTMF sequence generator and are using it to keep others from
hearing your messages, this would be a problem. I don't see standard
DTMF message transmission as conceptually any different from packet.

You might get into some sort of trouble in terms of the band plans depending
on where you transmit.

Acutally, I've often wondered about how the rules apply to the conversations
like "Remember the thing I told you might happen during lunch yesterday?
Did it happen?" Strictly speaking, could this be considered "a code"?

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Went through most of my stock. The list is pretty long, and there are a few dozen more types that need to go on it.
No prices as of yet, but will undersell new retail prices by a buck or two on each tube. You pay shipping.
Each tube will be tested before it goes out, so if you request one, and I test it and it is a
dead soldier or too weak to whip my grandmother, I will email you and tell you the bad news. Only good tubes will be shipped, as I know how it can effect the equipment. I'm a tube amp man myself.
email me at fresaint@bb.iu.net for the list.
Thanks

I have used this model for two years also. Great machine. Some of the units are reported to have a problem soting PL in the call channel memory. There are two series of them as far as mods go. The older one cannot be modded for Xtended receive without xtended transmit. Some of the new redios will scan for PL tones (I could care less but who knows?) and the radio does have some trickey button sequences (not as simple to program as some - you get to use the manuall alot). If you go alpha numeric you only get 25 channels without the ME1 chip. Order it now if you think you will need it who knows how long they will make it.

The radio does have more receive bandwith than the 79A.

Buttons are very small if you auto patch or use the keypad a lot.
Diodes are really small if you plan to mod this unit don't drink too much coffee first. Will get am air without mod.

Last but not least I really liked mine and just picked up another this week so I guess that is my best endorsement.

Best. Marty B.

Reese,

Icom does not have an 800 number for customer service. The Customer service hotline is 206-454-7619 or internet is 75540.525@compuserve.com.

With 800 numbers costing $5000 to $10,000 per month depending on amount, length of calls, and where the party is calling from in the world I do not blame them. With that kind of overhead added It would surely cause a price increase, just not due to the U.S. dollar falling in value to the Japanese Yen either.

Devenney,

If the offset is set to positive (DUP in the display) and the frequency
reads 147.960 MHz, it sure is not going to transmit as this would be out of
band. If you want to transmit on 147.360 Mhz then make sure you have DUP - in
the display. The software reset for expanded receive would not cause this
type of trouble either.

185. Need Advice: Having problems powering DJ-580T HT in car

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-06 06:30:01 UTC
From: david_b3@sfov1.verifone.com
Message-ID: <1995Jan6.133009.2499@sfov1.verifone.com>
Source record: 221432

I'm having problems powering my Alinco DJ-580T from my car. For a year and a half I had an Alinco power cord (the one with two fuse holders) coming off the fuse box, which I plugged into the side of the HT. I didn't pay any particular attention as to whether the HT was turned on when I plugged in the power cord, or whether the car was running when I plugged it in. Seemed to work fine all the time.

Then a few months ago, it started blowing fuses right and left. I had to make sure the car was not running, the unit wasn't turned on, etc. After wasting three or four dollars in fuses, I just quit using it and went to an Alinco cigarette lighter adapter (with filter), which I had for my family car. This worked fine for several weeks. This morning it blew a fuse and have blown four in quick succession. It seemed to blow mainly when the Alinco adapter is in the cigarette lighter socket, and I then plug the adapter into the side of the HT. When I first plug it into the HT, and then into the cigarette lighter, I don't believe it blew a fuse that way.

Alinco said they don't think it's the HT, they say there is too much surge from the car, or perhaps there's a short in the antenna.

Note: I have yet to experience this at home. I have an Astron 20 amp power supply and an Alinco power cord. I can plug it into the radio with the power supply on or off, and no problem. No blown fuses in two years.

Can anybody tell me:

1. Have you ever experienced something like this in your car?

2. Would something in the HT side power jack be creating this?

3. What is the best way to power the DJ-580T off my car's power supply without blowing fuses?

4. How do I go about checking which component is at fault here? I have a volt ohmmeter, but that's about it.

Thanks for any advice you can provide.

Gary,

What I meant to say in my original posting is that when I try to use my local repeater as usual, i.e., it's set on 147.360 to receive and shifts to 147.960 to transmit, it didn't shift despite the proper settings. I called ICOM and was told that this keyboard-based extended receive trick locks up the CPU and I had to do a CPU reset to restore the unit to its default settings (and then reprogram 48 memories and other settings, of course!)

Thank you for taking the time to reply. Sorry for the confusion.

From looking at the box and skimming through the booklet,
the rcv amp has only enough gain to cancel the losses of
the filters. You shouldn't put rcv preamps on HT's anyway.

190. What's a MFJ 1270 TNC Worth?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-06 15:34:58 UTC
From: lewcobb@jupiter.sun.csd.unb.ca
Message-ID: <3ejnv2$ohd@sol.sun.csd.unb.ca>
Source record: 221418

Hi and thanks for reading this. I have a MFJ TNC - Model 1270 I think (I'm at work and it's at home :) that I bought about 2 years ago and have hardly ever used (about 4 or five hours max). I am no longer into packet as my interests have turned to home-mortgages and the like.

Doe anyone know what this would be worth to sell? Its in brand new shape, complete with the original packing and manual.

Thanks for any help people can provide.

Lewis

>KB6JXT, Todd
>

What?!?!? Are you serious? I had wondered about that. I often take the control head off and carry it with me under the probably false assumption that it reduces the likelihood of having the radio stolen. I can't imagine that they would refuse to replace the head, but I can see them requiring you to prove that your really do own the radio.

With respect to the reset, most microprocessors have a reset line on the cpu chip. I imagine that the KW is no different. If you look into the schematics, you ought to be able to isolate which chip is the cpu, and possibly determine its real type (I-960? maybe a Intel 80186? Who knows) I suspect that you have something which a reset is not going to cure. Likley, you have fried some one of the peripheral chips which handles the display. You may have even reset the machine several times, but the display is hosed and doesnt show anything.

Keep us posted on your results. I am glad its you and not me. No, No, that's not how I meant it! I mean I'd rather have it happen to - no, forget it. Im sorry youre having problems. Good luck!

Yeah, but what is "American made"? I don't know about HTs, but I do know about cars. The Toyota Camry (and other models) are manufactured in USA, the Honda Civic and Accord is made in Ohio, all Nissan pickups are made in Smyrna, TN, and the Ford Crown Vic was classified (for several years) by the EPA as an import car due to its non-domestic content. Who is the largest importer of automobiles into this country? At one time it was Chrysler Corp. Lots of GM stuff is made in Canada, and last time I checked, Canada aint part of the USA.

Buy American is just plain impossible. Buy the best you can, ignore where its made, and if some American Business fails because of your purchase, then they obviously werent building the best stuff available.

>
> Thanks!

I am not impressed with Alinco. I bought two a DR-600t and a DR-130.
The mike for the 130 had to go back after six months (bad soldering joint),
The 600 went back after 14 months (lost the VHF transmit), that costs me
66 dollars, and now the 130 is going back with low transmit. Not sure if I will
have to pay for that.

Anyway, all my new radios, from now on, will be Icom or Yeasu.

Judge for your self.

Howdy!

I'm interested in acquiring an HF transceiver. I plan to use it in conjunction with a digital signal processor for experimentation with packet. I have in mind some sort of bare-bones rig. I require no front panel or audio functions since the DSP will handle all of this. It should have a high resolution frequency synthesizer, cover all of the amateur HF bands, and have a 100W PA. a kit would be acceptable.

Thanks for any thoughts on this.

Buy a good iron with a temperature control. You don't get very much smoke
at the right temperature. (which depends on flux-- rosin, RMA, no-clean, etc.)

Zack is joking, but this points up a common misconception. It may be 1 kW ERP, but it's still 1/2 watt spread over the surface of a 2 ft dish. That works out to about .17 mW/cm^2, which is well within ANSI guidelines.

At long distances, the signal is the same as if it were generated by a 1 kW transmitter into an omni-directional antenna, but that's not true up close.

From: msimon@oracle.com
Message-ID: <3ekca4$gi1@dcsun4.us.oracle.com>
Source record: 221426

Hi,
I have a radio shack HTX-202 that has birdies (spurious receive signals) at several places in the 2M band (e.g. 146.760,144.080). These are very pronounced when using the rubber duck antenna and somewhat less so when I use a dual band whip or a J pole antenna. Do any other HTX-202 owners notice this phenomenon with their unit? If so is it at the same frequencies and does it vary with the antenna being used?

Thanks in advance for the info.

Marc Simon KE6JAF

P.S. When receiving real signals at the birdy frequencies the end result sounds much like doubling on repeaters.

Source record: 221435

Depends. If you are sporting an FT1000, the DSP does little for
you. If it has a good noise filter & AGC, that's something.
The added filter does little with a good filter in the rig.
A hytrodyne remover is nice.

Source record: 221439

I had the chance to go to HRO in Portland, Oregon today where I could compare the FT 990 with the Kenwood TS 850 and guess who won? I was incredibly impressed by the 990 even though I had an 850 for a short time. Questions to happy owners:

1. Does the 10 Hz freq step as opposed to the 850's 1 Hz step present a practical problem in operating in any mode?

2. Which if any of the acessories (especially filters) have you used and how do you like them? How is the phone patch? Nice touch putting it in the speaker! Do you like the SWR/Power meter?

3. Do you think that with a well placed R-7 I could work the world? Is the selectivity of the RCVR sufficient to overcome the crowding due to the vertical antenna ?

Thanks Guys, & 73's

207. Need schematic for Lambda LDX-B-152 power supply

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-07 04:31:14 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1995Jan7.043114.3438@VFL.Paramax.COM>
Source record: 221440
Cross-posted to: rec.radio.amateur.equipment,sci.electronics

I have a sick Lambda LDX-B-152 power supply. It is a small +/- 12 volt 1.6 Amp regulated linear supply. The -12 volt side is putting out about +2 volts.

It certainly would be much easier to fix if I had a schematic. Anyone have any idea where/how I could get one?

Any ideas of what kind of component failures in these types of supplies could cause this? It had been operating fine for years with a very light load and suddenly one day >poof< The transformer and main diodes seem to be OK but I did find a blown 5A fuse on the circuit board inside. A new fuse blows out right away with not load. There are 2 fuses. The other fuse (for the +12 side ??) is fine. Is suspect something in the regulator has failed..

Fine, if toys are your thing, get the Kenwood, but then don't come
complaining when it doesn't measure up as a communications tool.
That's what I was complaining about, people buy a toy and then
complain when it doesn't work like a good communications tool.
Duh!

IMHO, amateur radio is about communications, and if you want
to do communications well, you use the proper tool to do the
job. Otherwise, learn to live with the limitations of a toy
tool. You wouldn't attempt to build a boat with your 5 year
old's toy tool set would you? Why expect toy communications
tools to work any better.

Try the Electronic Communications Privacy Act. You do *not* have blanket
permission to listen to any signal you want. Messing with satellite
distributed cable programming is theft of services, even if you intercept
it *before* it goes on the cable. I'll bet you steal books from Walden's
down at the mall too. Just because you *can* doesn't mean it's legal,
moral, or ethical.

My IC202 at 3 watts PEP could use an amplifier in this power class,
but not this one because it is class C. Other manufacturers make
amps that are class AB1 which will do dual duty for SSB or FM,
examples: Mirage or RF Concepts. The efficiency of these no tune
amps doesn't change markedly whether they are biased for class
C or AB1. It seems a pity that RS decided to save a resistor.

Alas, gell cells sulphate if left discharged too long. You probably can't save it, but you might try charging it with a pulsed high voltage current limited source for a few days. Sometimes they'll come back to life if you do this. Something on the order of 350 volts, unfiltered halfwave rectified AC, current limited to 10 ma may do the trick. Watch out for excessive heating if it starts coming back to life. It's worked for me a few times.

>get S7 noise. Can anyone offer additional suggestions? It appears
>that the noise is radiated.

First, what's the noise sound like? I assume the engine is off but the ignition switch is on for the S7 noise. The fuel pump may still be the culprit since the Ford fix doesn't always work, but it could be an instrument transducer, or several other things. Try pulling fuses one at a time to isolate the circuit that's causing the noise. Then with service manual in hand, trace down the equipment attached to the offending circuit, and disconnect each piece. When you find the offender, replace it, or suppress hell out of it.

If the engine has to be running to generate the noise, the problem becomes considerably harder since pulling fuses and disconnecting equipment can stop the engine. Here you'd need to use a RF sniffer loop to localize the problem. You must find the noise source before you can suppress it.

Hello-

I performed the tx\rx out of band mod quite a while ago and I'd of course like to disable the tx. I have HEARD that for some reason, disabling tx by removing the 0 ohm chip resistor also increases intermod susceptability. The intermod is bad enough as it is. Anyone have any thoughts on this?

Jack,

Usually this loss of the offset is from a bad job of modifying the radio for out of band transmit. The total reset and then doing the RX key sequence again will not hurt anything though. Good Luck

Source record: 221306

On 6 Jan 1995 21:22:12 GMT Marc Simon (msimon@oracle.com) wrote in
rec.radio.amateur.equipment:

: I have a radio shack HTX-202 that has birdies (spurious receive signals)
: at several places in the 2M band (e.g. 146.760,144.080). These are very
: pronounced when using the rubber duck antenna and somewhat less so
: when I use a dual band whip or a J pole antenna. Do any other HTX-202
: owners notice this phenomenon with their unit? If so is it at the
: same frequencies and does it vary with the antenna being used?

I have noticed the same thing on mine. I know it has been discussed
here on r.r.a.e but I can't find a copy of the posting. I think the
explanation was that it is local pickup from a very high harmonic of
an oscillator used in scanning the keyboard and/or the display. There
is a 3.579545 Mhz crystal, X1001 in the circuit, and its 41st harmonic
would be 146.76135. I don't know how to explain the 144.080
spur. With a double conversion receiver containing a number of
different oscillators there are all sorts of combinations of
oscillator harmonics and image frequencies to be examined.

It's only a problem with the rubber duck because the pickup is
external to the radio. With a full size antenna at any distance from
the radio the pickup of the local oscillator is inconsequential.

It might be possible to slightly alter the frequency of X1001 by a
small change to C1016 or C1018. Moving the fundamental frequency up by
211 Hz would put that spur on 146.770, a full 10 khz step away from
the popular 146.760 repeater output. Of course, I have done this
calculation with a hand calculator, you would really have to write a
program to check out all the other possible spurious responses to see
that you didn't just move another spur, now falling safely between the
programmable channels, onto another frequency you might want to
include in your scanning. It's not a trivial problem.

I have been meaning to try wrapping the radio in aluminum foil to see
if the interference could be knocked out.

Disclaimer: Anything you do to your own radio is your responsibility.
Beware of modification suggestions from people who don't dare to try
them on their own equipment!

I did all this once and I don't remember how far down I got, but S7 doesn't sound all that bad. I just relied on the noise blanker after that. Anymore noise reduction and you're talking about a lot of work.

I am not impressed with Alinco. I bought two a DR-600t and a DR-130.
The mike for the 130 had to go back after six months (bad soldering joint
),
The 600 went back after 14 months (lost the VHF transmit), that costs me

66 dollars, and now the 130 is going back with low transmit. Not sure if
I will
have to pay for that.

Anyway, all my new radios, from now on, will be Icom or Yeasu.

Judge for your self.

^^

I have a 600T in my truck and I love it! I had a solder "wisp" in the mike
but I took care of it myself. Other than that, I think its a great radio.

Need to know before I modify recieve capablity of DR-600.
The MOD that allows you to recieve AM VHF Aircraft also
allows 800 Mhz reception. However I must add an additional
"pigtail" coax conn to a point on the main board.

With the advent of the addendum to ECPA 4/26/94. No cellular
recievers allowed in US (execept those already on shelves).

How can I find out if my DR-600 is one of the "older" ones.
I Did the mod. I get aircraft and 800+ display. but before
I go through of adding another ant pigtail. I want to know
if the 800mhz circuts are still intact. I do recieve so image
freqs on 800 whitout ant, buts thats all.

Can you help me.

Replies here or via E-Mail ken_anne@cnct.com

Thanks
Ken

I've had an 850SAT for a little over two years. I love it. The receiver is unbelievable. Concerning packet: I had this rig overseas when in the USAF and ran a USAF MARS HF Packet BBS with it for about a year. It ran about 18 hours a day, 7 days a week. No problems. Also used it on RTTY as well as packet, CW, and phone. It's my primary rig now and I wouldn't trade it for anything else I've seen lately.

Prefer to sell in the Seattle area:

Yaesu 101ZD with external antenna tuner, DC Converter block, mic, manual.
HyGain Vertical multibander with interchangeable whips (mobile mount) also
available.

Would like to part/all trade for any of the following:

EtherNet card for IIci - BNC style
Large SCSI drives
Dual Band mobile or hand-held
220 Mobile
2m Mobile
Or any other items you may think worthy of trade...

Contact me directly at: administrator@ndcrt.wa.com

Thanks & 73's

Good luck. I gave up on Fords years ago because it's damn near impossible to get supress the noise enough to operate HF mobile. A real shame, too, since they do build decent cars.

242. Need plugs and brackets ! Kenwood, Midland, Gonset

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-08 09:34:27 UTC
From: morris@grian.cps.altadena.ca.us
Message-ID: <1995Jan8.093427.17492@grian.cps.altadena.ca.us>
Source record: 221325

I need to get a couple of radios back on the air and was hoping
that somebody can point me to a few parts...

a) The Midland 13-513 220mhz radio used a 7-pin accessory plug. It
is essentially a tube socket. I need one or two plugs for the
beast so I can use it on 220 here in LA (90% of the repeaters here
are PL'd). As a last resort I'll break a 6C4 and salvage the base,
wire it up, then fill it with RTV. But I'd like to find something
a little bit more "right".

b) Kenwood TR-9000 All Mode 2m rig. A "tone" plug, so I can add a PL
encoder. The club machine is now PL'd. I'd also like to find a
mobile bracket, a book and a schematic - it's pretty numb on 2m ssb,
but FM works fine... The tone plug pinout is a 4-pin that is wierd!

c) Gonset Communicator IV on 2m. A book, and a bracket. 2m AM lives!

Well, feel free to appeal your conviction all the way to the Supreme
Court. The Constitution in mute on electronic communications so the
Court will be making new law, always a bad thing since that function
belongs to the Legislative Branch according to the Constitution, if they
find for you. I'm fairly sure they won't find for you however, since
the concept of common carrier privacy has been upheld for 60 years.

: Does Kenwood still make that 2m/220 Mhz MOBILE radio?

As far as I can tell, no. This information (or lack of it) was gleaned by looking at HRO, AES, Texas Towers, etc. catalogs and Kenwood ads.

: Does anyone else make a 2M/220 Mobile rig?

Again, as far as I can tell no. Icom and standard make a (2m/220)dual band ht (about $700 each) and yeasu and kenwood sell a 220 ht. The Icom is the only recent one, the others are several years old.

There are used 220 rigs around, but I gave only seen one advertised for sale. They are rarely offered for sale. :-(

From: patrick@thorax.xs4all.nl
Message-ID: <0532mah5f@thorax.xs4all.nl>
Source record: 221331

I am about to purchase a C560, a new handy from Standard, and I wonder
if there are any comments on it.

Some questions I have are:

- Is it possible to use the crossband-function with the
70cm and 23cm (subbband) ?
- Are all options available on the 23cm subband ?
- Is CTCSS coding/decoding an optional module ?

Any good or bad experiences welcome !

Thanks in advance.

Message-ID: <93.7975.7583.0NFB8B13@woodybbs.com>
Source record: 221249

TH>Why in the world would you WANT to add a preamp?

RU>The D104 is a very high impedance Mic. the Pre amp matches it to the
typical low impedance of most modern xcevers. And makes it sound
much better

Interesting... never noticed much (if any) degradation in the "sound"
of my old D-104 when I did (originally) use it on my old TS-130S.

FWIW, most (many) of the new(er) solid state rigs will readily accept
high impedance inputs with little complaining.

RU>P.S love the look of the 10-DA head reminds me of a 1937 chevy. grill

Yep, me too. It's quite a good element, and it's designed for SSB.
More bass than you can get from the D-104. It's dynamic and the D-104
was either xtal or ceramic (neither of which were know for their bass
response).

>Does anybody have any experience with these? Where might I learn more about
>what to do/how to go about it? All tips would be appreciated.

In general there are two types of noise associated with mobile.. One is ignition noise. That is usually the one most 2meter bands can hear due to the length of the spark plug wires (about 1/4 wave length at 2 meters).. Almost all new cars have resistance plugs and wires that take that to a minimum. f that type of noise is present after installation repost here and we can talk about it.

The second type of noise is from the alternator and it comes in through the usual spot, you power line to the mobile. You can buy some simple filters for the power line at places like Radio Shack that for the most part do well. Ensure proper current rating while transmitting..

In general good connections to the frame and power do not produce any problems with 2 meter mobiles. There are exceptions of course... HF on the other hand can pick up noise from all over the car, some easy to cure some very hard..

You might try using a friends or your handheld in the car while driving to see if you hear something. Or even connect the HT to the cars power to see if it is especially noisy.. In general even my 72 Blazer has no problem with 2 meters... Have fun

John KD6VGA

258. Rapid Battery Charging System

Newsgroup: rec.radio.amateur.equipment

I have a master charger I from W&W associates. It works as advertised.

I use for ICOM and OEM batteries including Radio Shack's for the htx-202,
though my and my xyl's 202's each live with an ICOM bp8.

It also works fine for other batteries and a little surgery grafted a
spare ICOM cup onto an Azden charging stand.

It seems to put a little more charge into batteries than my ICOM BP-35.
If I charge a battery with the BP-35, it will still take more charge with
the master charger.

I especialy like the auto shut-off. You can put a battery in it and leave it
for days with no problem.

73,

Geoff.

For sale or trade for older gear,

Ten-Tec Omni-D with p.s., cw and ssb filters, 160-10m 100w out, digital frequency readout, notch, manuals, excellent.

Heath SB-200, 500w out, 80-10m, excellent, manuals

Heath SB-101+cw filter, SB-600 speaker, HP-23 AC p.s., all very good to excellent.

Make offers on rigs-I have to sell the SB-101 before I can split the other accesories, though. Also, I'd rather swap for vintage gear. Specifically I'm looking for Collins 75A?, National NC-183D/spkr, NC-300/303+spkr, old mics, or basically anything from 1948 through around '63. I'm trying to relive a previous life :)

Well, I have a QF1A that I have used for some time. Thought I would try the "new technology" so I bought a NIR-10. Sure enough, it would notch out multiple heterdynes like nobody's business. But I did not care for the sound or intelligibility of the digitally processed audio. So, I sold the NIR-10 and kept the QF1A.

Well, I have used a QF1A for some time now. Thought I would give
the "new technology" a spin, so I bought a NIR-10. It would notch
out multiple heterodynes like nobody's business! However, I did not
care for the digitally processed audio or the noise removal feature
of the NIR-10. Listening to it became tiresome. So, I sold it
and kept the QF1A. Need I say more? Good luck.

From: ham@wam.umd.edu
Message-ID: <3erb9m$41d@cville-srv.wam.umd.edu>
Source record: 221253

Sure, the DSP filters notch out heterodynes and the like, and have a brick wall-type response. But they also sound strangely "hollow," which for listening to CW and SSB I <<REALLY>> find uncomfortable. Kinda like a "digitized" sound, if you can picture it...

The Autek is probably one of the best analog filters on the market, and you can EASILY get them used for $50, too.

271. Coaxial 1/4 traps to fight against TVI from 50 mhz. transmitters

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-09 13:29:49 UTC
From: bad1679@cs.rit.edu
Message-ID: <1995Jan9.132949.1461@cs.rit.edu>
Source record: 221254

When transmitting on 50 mhz. with 2 watts through a quarterwave groundplane in the room above the television room, I cause the audio on the television to be drastically reduced (a vcr is used for tuning in the cable channels and the interference occurs wether watching a tape or watching cable - no antennas).a The interference seems to be caused by overloading the receiver from my 50 mhz. transmitter. A while ago I read about using 1/4 wave traps (made from 75 ohm coax) to filter the input to the tv or vcr to reduce/eliminate the tvi. Does anyone have any experience with these things? How sharp a notch do they exhibit?

Thanks..

>
>The Autek is probably one of the best analog filters on the market, and
>you can EASILY get them used for $50, too.

I used Autek and RS DSP, and they are distinctly different:

RS - very steep skirts
- no ringing
- no hum
- perfect filtering below 300Hz and over 3KHz
- noticable nonlinear distortions on CW

QF1A - Either high or low slope filtering
- ringing at high Q on CW
- some hum all the time
- no nonlinear ditortions (unless overdriven)

IMHO, RS DSP is much better for the unexperienced with a rig with poor
AF filtering and without CW filter. QF1A adds qualities to a better
rig with a wider CW filter and more experienced operator. Sometimes,
too good slopes are a liability, e.g., in contests or when tuning to
the last station working that rare DX on CW.

>

I just got the Mastercharger II for Christmas and really like it. I use it for the FT-530 and the other side for my HTX 202 & 404 along with my Icom A21 (they all work useing the same cup). It's worked well, although I think the Yeasu fast charger can charge the battery a little quicker. My friend has the Yeasu single slot fast charger and once I charged my unit using his charger, when finished the battery appeared to be warmer than when charged with the Mastercharger. The other problem with the Yeasu charger is they only charge Yeasu radios, they don't offer other cups.

You may also want to get the bigger battery. I was dissapointed with the stock Yeasu 7.2 v 600 mah battery, I ordered the after market 7.2v 1200 mah battery along with the charger (also much cheaper than Yeasu's 7.2 v 1000 mah battery). I could not quite get one full days use from the stock battery (mostly monitoring), now I can get two days use easily.

Have fun and enjoy your new 530.

Ken

-->The MOST important difference in the FT51r and the FT530 is
-->SIZE!! I didn't see that mentioned in any of the previous replies.
-->I have a 51 and have had a 530. There are a few differences beside

Unfortunately Yeasu also changed the battery form factor again.
I personally always buy a few extra BPs and the fast chargers.

I would probably try the 51R but I have extra batt packs,
& the fast charger for the 530 form packs and I'm not willing
to buy all that stuff again.

Wonder why they got rid of the MONitor function? (push a button
to monitor the input freq of the repeater?) I like to move off
the repeater if I am in simplex range. A good feature.

Last week I wrote the following regarding a sick TM-733:

> the display went completely blank except for the primary key labels
> (Call/Low/Shift/Tone/Rev/Mute) across the bottom of the display and
> the message "-on-" in the lefthand display area. None of the
> buttons function now, which means I cannot power the rig off. This,
> in turn, means that I can't ever perform a hard reset, since that
> required holding down the appropriate magic button while powering
> the rig on.

I just reached Kenwood's service department about this, and thought that a follow-up was appropriate in case anyone else experiences this problem. Kenwood tells me they have seen this problem before, and that it is caused by a blown IC in the control head that *should* get pulsed by the base unit upon connection but is not. I was told to package up the head and send it to Kenwoods service center along with a description of the problem, and that it would be fixed without charge as a customer courtesy. No return authorization is necessary.

Since I've had a few unflattering things to say about Kenwood in this forum over the past few days, I should point out (1) you sure can't beat free repairs, and (2) the gentleman who took my call was knowledgeable and courteous, and the entire telephone transaction took maybe two minutes. The only down side was that I listened to busy signals for three days before actually getting though, but then Kenwood is certainly not the only vendor with this problem. (I remember spending over 90 minutes once listening to (bad) music-on-hold while trying to reach Toshiba's service center, and the response I got when I finally made it in was definitely *not* worth the wait.)

Assuming that the repaired part comes back to me in a reasonable period of time, Kenwood's stock just rose a couple of points in my book....

Hi,
I have a Grundig Satellit 700 shortwave receiver.
Although a very nice radio, I am not thrilled about the performance
of the synchroneous detector (rumble noise).
I saw a *.mod file for the (older) Satellit 500 model on ftp.cs.buffalo.edu
describing a fix for this problem.
Has anybody undertaken, or does anybody know about a fix for the problem
on the 700 model?
I don't have the circuit diagrams for the radio so I can not check
whether the 500 fix applies to the 700 also.
Which leads to another question:
Does anybody have the diagrams or know where to get them?

Thanks,
Arne

I have a Sat 700 and love it. As for the Sync Detector, simply turning the Bass all the way down eliminated the rumble completely. No mods required. I had the same feeling as you until someone else passed along this simple solution.

I have 5 dead Icom batteries for the IC-02AT and IC-2AT. Replacement cells are available from Periphex (800) 634-8132. Take all 5 batteries for $15.

BP-5, BP-7, BP-8, and two of the small standard batteries that came with the IC-02AT.

From: kanefsky@halcyon.halcyon.com
Message-ID: <3ete2i$7lv@news.halcyon.com>
Source record: 221289

I keep hearing good things about Ten-Tec HF rigs, and I'm thinking about choosing one over the more common fare from Icom, Yaesu, and Kenwood. Generally I want to emphasize radio performance and construction quality over bells and whistles, but I would like computer control to use with logging software and possibly with a remote control interface like the AEA RadioLink.

The Ten-Tec ads tout the superiority of their computer interface, but it isn't clear what it's compatible with. Will I be severely restricted in my choice of software if I go with a Ten-Tec? Will I be able to use the AEA RadioLink?

307. HF Radios and Ford Explorers

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-10 13:22:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2F128A98@smtp>
Source record: 221290

I have a Range Rover and with a TS50 or a FT-900 I get 55-57 noise.
I then noticed that the fuel pump was radiating it. When I turn the keys to on (just before the starter position) the fuel pump is engaged to pump fuel to the engine for about 2 seconds during which the noise is on. After the 2 secs, the pump stops and so does the noise.
I put in a capacitor across the pump terminal and ground (about 1 uf although they recommend a .5 uf) - BE VERY CAREFUL IF THE PUMP IS IN THE FUEL TANK AND YOU ARE USING A HOT SOLDERING IRON NEAR THE FUEL TANK.
The noise is now down to 2-3 but still there.
Hope this helps you.

|> with the sat. tracking software. Is there a tsr that someone has written to
|> correct this? There is no way to tune the crystal manually on the motherboard.

This is a problem common to all DOS machines. The crux of the problem
is that the PC's hardware clock is only read at boot time (by MS-DOS).
After that the Time-of-Day clock is updated by a software interrupt
which simply adds a clock tic to a counter which is, in fact the TOD
clock. If your system is 100% CPU bound, as it surely is running a sat
tracker, there is little spare time to update the TOD clock. A possible
solution would be to write a TSR to re-read the hardware clock and
update the TOD clock.

Another possible solution is to run your sat tracker under Linux,
Windows NT or OS/2 since they do not suffer from this brain damage.
I run SatTrak 3.8 under Linux and NT with no worries.

Best,

>vy 73 de AA1KD, Charlie

Years ago, we used an IC (actually in a metal housing) which was a balanced modulator for decoding inversion. It was a MC1496 or maybe MC1596. I don't know if anything similar is available, but this one came with application notes and diagrams. It worked well. This was when inversion was used to scamble public service frequencies.

Yeah, I know, Hugh, but most of those transistors built for Class C
only were very sensitive to operating conditions and generally aren't
used in new designs. The multiple emitter designs, that do work well
for SSB, are also a lot more tolerant of operating conditions, thus
saving bucks on the protection circuits. I don't know what device RS
is using, but I'd be surprised if it wouldn't work well in SSB service
if properly biased.

>FWIW...

I have had both radios for a couple of years. I can't make up my mind on which

I have had both for a couple of years. I cannot decide on one over the other. The 850 sounds less restricted on AM in the audio passband, and the IF filters can be selected individually. The 990 feels more like a radio. The 850 feels like you're operating a VCR. The 850 has more memory (and more flexible) memory options. I hate the 990 on this score. The fact is that if you want a contesting radio, buy the 850. If you want a ham radio, buy the 990. I have more or less decided that for my self I don't like either one. I want both in one case.

Simply take off the front "control head" section, take it apart, and cut any wire "loops" that you see on the circut board. I cant remember which key you hold down when you turn on the power to reset the radio, but this is in the inst. book. This has to be done for the new "features" to become active.

The new name for the function is REV (reverse in/out? - I don't have a manual n front of me). It is a single key to listen in at the transmit frequency of a repeater pair. Again, without the manual, I'm not sure if it also reverses your transmit frequency too.

Ig>
Ig> Gary

I would suspect that it was built for class-C use only from the
economical point of view not to mention that it's marketed for the FM
service.
The efficiency would decrease susbtantially if they were to bias
the transistor for linear applications therefore to obtain the gain
they require, a more expensive transistor would have to be used if
they biased it in the linear region. ie... a 50 watt class-C transistor
is less expensive than a 50 watt linear rated transistor.
It might work if you bias it linear but expect noticeably lower gain.
Also, I'd expect something more than a simple resistor to bias the
transistor linear...say a constant current regulated source.

This is not entirely correct. It doesn't matter if the machine is CPU bound
100%, the clock will update reliably. This is because the timer tick is
interrupt driven, from the Timer 0 channel, and is sourced by the 14.some_odd
megahertz clock that is used for bus timing, and in the old days, color burst
generation. The problem is someone is leaving interrupts turned off for too
long, and ticks are getting missed. This has NOTHING to do with the machine.
It's all in the code you're running (like any TSRs, heavy serial I/O without
using a 16550 SCC, etc). The only other scenerio that comes to mind is that
perhaps your oscilliator is off, but for that kind of drift, you'd most likely
have other (more severe) problems.

Why? Clearly Dominoes has a flying buffalo, and I'd assume as long as you're
not trying to deliver to a Lear at max cruise, it should work. I just want to
know how that buffalo get clearance into a class A airspace...

> Has anybody undertaken, or does anybody know about a fix for the problem
> on the 700 model?

The fix on Sat500 did not fix the rumble problem, which seems to come from the phase noise of the PLL ocsillator. The 100 Hz component in the rumble could be reduced by placing few thousand microfarads across the AM +3.5 V voltage. The residual rumble is quite different on different frequencies, both in strength and sound. In some cases it can be cured by detuning by 100-300 Hz. I have not touched any Sat 700, but the analog part of it looks similar on paper, not so in reality. 700 is completely surface mount.

H All,

'k Weet niet of dit de goeie area is, maar ik doe 'n gok.

Een totaal aan kortegolfontvangers en scanners verknocht ML vriend, heeft
weer eens wat nieuws gekocht....

De allernieuwst AOR 8000 pocketcomputerscanner (hij heeft maar een stuk of
10 scanners, maar och...)

Pas geleden is deze freak ook met computers begonnen, beter laat dan nooit.
Hij heeft deze computer gekocht om het te combineren met zijn kortegolfontv.
en scanners.

Nu wil hij graag zijn AOR 8000 besturen met zijn comp.

Wat heeft hij hiervoor nodig??
Wie heeft zoiets??

Tevens wil hij, ik ook trouwens, sattelietweerbeelden op zijn comp. ontvangen.

Wat heeft hij HIERVOOR nodig??
Wie heeft zoiets??

Zenders/ontvangers/antennes en schotels heeft hij genoeg, het gaat hem vooral
om de apparatuur en evt. interfaces.

Wie helpt hem, maar vooral mij (hij denkt n.l. dat ik er ontzettend veel ver-
stand van heb, ook al heb ik hem tig keer uitgelegd dat ik WEL (wat) verstand
van comp. heb, maar NIET van deze specifieke toepassing)

Stuur s.v.p. een mailtje.....

Groetjes en merci,

Rients Agema

... En dat wilt ik nou ff kwijt......

Be very careful. Transistors are very non-linear devices. With out some
sort of negative feedback to make them linear they will not work well in
class B or AB. This feedback also reduces the gain of the amplifier
(necessary to reduce distortion). If you don't want to produce splatter for
many KHz you will need to modify the circuit.

don, I responed to this message yesterday..i do not have one to sell bui i have some information that you may be interested in. This is from QST magazine Jan 1995 issue page 42 in the section for strays. It reads and I quote: KENWOOD TO RESSURECT PRODUCTS?

"I was talking with someone at Keenwood Technical support the other day concerning the IF-10B interface for the ts940 hf Transceiver. He said that Kenwood is thinking about remaking the IF-10B, and is discussing the pros and cons because of the many phone calls for this product. He said it would help if people send letters or contact Kenwood about bring back the IF-10B and other discontinued products. I also found out that the chips for the IF-10A/B and EPROMS are still available from the East Coast Transistor Parts Inc. The Tech at Kenwood said there's plenty of room inside the TS-940 to perfboard the interface and hardwire it into the rig. The chips and EPROM cost about $70.
-- Ted Coats, NZ3Q, Philadelphia; Internet TedCoats@AOL.com or TedCoats@ix.netxom.com" end Quote.

So i would say that there is hope in obtaining the interface that you seek... Good luck in you search. ed jones KB4OIX in palm bay florida

Just curious - is the radio wired directly to the battery terminals, or are
you wired to an ignition-contolled circuit? I have a Yaseu 2200 installed
in my Ford Ranger and have never had this problem. This is the second time
in the last couple of weeks someone has mentioned this in this group, but
non one has said where the power cable is wired to. I have my power cable
wired directly to the battery.

Attention all DC area 6m wannabees...

take your 20m xcvr at <5 watts and get 8 watts out on 6 meters!

The price is Ten-Tec's $95 apiece for the kits, which they say is
about as low as it can get. HOWEVER, we can save on the normal
$5/piece for shipping. So far, I've got myself and one other person.

Let's take over 6m! Anyone else who wants to save some shipping
costs? Admittedly, it's not much, but it's an extra UHF male-
to-female connector or something...and we save a few trees in the
process by using only one shipping box...

Email me or phone 301-549-1022 or 301-901-9260(w) by Monday if at all
interested...

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Yeah, RF switch hang time can be a nuisance. OTOH, it does simplify
: things if the amp is at the end of a long coax run up a tower. You
: can phantom feed power *or* control, but both power and TR control
: would require another cable. I understand that this amp includes a
: preamp, otherwise just adding another resistor (to the RF switch
: circuit from Vcc) and switching phantom DC power on and off would
: handle TR. I've done this with other amps with good success.

I don't see why you can't use a DTMF encoder/decoder to put
extra control signals on the coax feeding power and RF.

: has decent heatsinking, a diode might be needed too for high duty
: cycle use or there might be thermal runaway. Lot's of these amps
: are common base configuration which can also simplify obtaining
: stability in many cases.

I don't see how you can use a simple resistor to make a common
base amp linear. Don't you need a negative bias supply that
can sink the entire collector current? (Assuming the typical
NPN transistor). To get it to run off 12 volts, most designers
would end up using a fancy switching power supply.

: Well it's true that higher voltage FET amps are often cleaner, however,
: most of the commercial amateur VHF amps on the market do use 12 volts
: and bipolar transistors. They may not be perfect, but they do manage to
: meet FCC specs. I'll tolerate in-band IMD that's only down 22 db in a
: lot of cases, if the off channel spectrum is clean. SNRs are rarely
: that good for the types of things I do with the little portable, so
: the IMD is "lost in the noise" at the other end. I worry more about
: spurs and harmonics that pop up out of band, or on top of other
: operators down the band.

: I suspect you're letting "better" get in the way of "good enough" here.

Yes, maybe I'm thinking of people who operate on VHF on hilltops instead
of valleys. A 200 mile range isn't unusual in a good spot with a small
yagi. Anyone within LOS out to 60 miles can hear IMD down 70 dB just
fine. It may not be a problem where you live, but it certainly seems
to be a problem for those in densely populated areas--one amateur
with a dirty amplifier can make it real tough for lots of amateurs to
work any weak signal DX. Actually, it can be a problem anywhere you
have two amateurs nearby, it just that it is much more likely to happen
as the number of amateurs goes up. Sort of like the chances of two
amateurs having the same birthday.

I have a 5100 wired directly to the battery, along with a few other items
on the same line. It is in a GMC van. I have never experienced deprogramming.
There is no filtering, a single fuse, and moderate size wire. I really did
not take any precautions in the installation. This one might merit a call
to Yaesu to discuss with the techs there.

341. Old Heathkit (and Drake etc.) equipment for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-12 15:35:40 UTC
From: pascalamb@aol.com
Message-ID: <3f3i8c$mvk@newsbf02.news.aol.com>
Source record: 221223

Folks,

I've finally been able to jot down the model numbers of the old ham radio equipment that my father left for me, and so far I haven't been able to locate the old Heathkit rigs that he used to have. I assume they are in storage, with lots of other old stuff. In any event, here's a list of the ham equipment that indeed is available and that I'd like to sell. All have not been used in years, but have been carefully stored in plastic, and are in excellent condition:

Drake R-4A Receiver
Drake T-4X Transmitter
Gonset G-Sixty Three Receiver
Drake Ms-4 Receiver
Variac Auto transformer
Lafayette HE-48
Varitran Transformer Model V-1M
Asiatic MS-4 Speaker

and two-three other microphones. Damned if I know where that Heathkit stuff is. He also used to own several morse code sets (or whatever you call it), but I can't find any of them. I also located a bunch of Volt/Amp/Ohmeters that appear to be anywhere from 30-40 years old, and various other stuff.
Everything that I've located so far is in the Riverdale section of New York. If you're interested in any of the above, kindly contact me by e-mail with an indication of how much you'd be willing to pay.
Thanks much, and I'm sorry for the confusion re the Heathkit equipment. I will post a note here if and when I locate it.

342. Marine band radio modification

From: vbreault@rinhp750.gmr.com
Message-ID: <VBREAULT.95Jan12104549@rinhp750.gmr.com>
Source record: 221224

I have been offered a marine band radio for a low price but before I cut the check I want to be sure that I can modify it for amateur 2m band use.

The radio is a Uniden model MC-580. It's a 1W/25W unit that looks a lot like the MTX-101 that Radio Shack sold until 1994. (White case, gray sloped front)

Has anyone done this conversion? Can anyone point me to someone who has?

Weniger Lighting Systems -- Emergency Lighting Sales, Service, Installation
---
==========

George,

I think that this is normal since there is a band pass filter @ RF output
module w/ a center frequency at 440 MHz ham band to eliminate the harmonics.

This happened for my Alinco Dj560 too. After mod, I actually measured
output power droped to almost zero around 467 MHz.

I think that the radio is normal if you get rated output w/in ham band.

> The WM-1 looks good (from Autek's ad):
>
> Seperate SWR & wattmeter meters
> Remote RF head
> PEP & average watts
> no cross needles
> 20, 200 and 2,000 watt ranges

I have been using one for years. This is a very good meter
for the price. I have compared its accuracy right out of the box
against the Bird thru-line. In all modes, 20, 200 and 2000 it was
within 1% of the bird.

> Are the meters lighted?
No they are not. But call the guy on the phone, he
may have that as an option. No JOKE, call him on the
phone.

347. WTB: Kenwood TS120 Mobile Mount Clip

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-12 19:00:43 UTC
From: knight@cae.cig.mot.com
Message-ID: <3f3u8s$kqa@delphinium.cig.mot.com>
Source record: 221229
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

This is a longshot, but on the bottom of the Kenwood TS120, there is a small mounting hook about .75 inch by .5 inch that the lock on the mobile mounting bracket latches onto. Unfortunately, the previous owner of my '120 removed it. If anyone has a '120, and doesn't plan to mobile it with the MB100 Mobile Mounting Bracket, I'm offering $5, shipped, for that little hook.

Please send inquiries to: knight@cae.cig.mot.com

Tnx & 73,

Paul

I am offering for sale an Icom IC-W2A Dual band 2m/70cm Handy-talkie.
It's in perfect condition, and it includes a BP-94 battery pack, a BP-90
battery pack (for use with AA batteries), BC-77A battery charger (wall
transformer), and a FA-1443B dual band antenna. This system is about
3 years old, and in great shape. Oh, there's also a nice cushioned carrying
case.

Price: Best offer.

> Dave AB7FV

>PS - have you looked at the Japan Radio Corp JST-245?

No. Regarding the memories, the 850 has this scratchpad mem that I like. But, I guess you already know that. Let's see.....what I really dislike is the lack of two completely separate band memory registers for the A and the B 'VFO's. On the 850 I store cw band freq's in the A vfo and ssb freq's in the B vfo (along with the mode, etc.), but on the 990 you only can have one freq on each band and it's the same in both vfo's (except for one freq on one band on one of the vfo's extra that also gets changed to be the same as the other vfo on that band depending on how you switch back and forth.....now you know why I did not mention the memories in detail at first). I guess it's not so much the memories in general but what they call the band stacking memories that I like on the 850. The 850 also has this mem/vfo knob that in the vfo mode can become a 1KHz knob (it can be set for several diff freq steps). It's neat for going up 3KHz on 75M and coming back with out having to carefully adjust the vfo knob to x.xxx.00. I'm not saying it matters to be on .00 but it's easier to get along with the 10 to 15 cycle off cops when you get right on. I have never fooled around with the scan stuff on either one. Now if the 850 just had an infrared remote, I could lay on the couch and listen and not have to get up to adjust when everybody goes to 160M when the 80M band goes out in the eve.

Hi,

I am using a Kenwood TS-140S that has the modification to unlock transmit on all frequencies. (D29 and D31 disconnected)

However the transmitter will still lock below 1600 Khz.

I was hoping to use the rig as an accurate signal generator as well as an HF rig to align another receiver.

Does anyone know how to unlock the transmitter below 1600 Khz so that I can generate a 455 Khz signal and also the Broadcast signals 550 khz to 1600 Khz?

Thanks

Colin (VE7CQH)

>
>
Chuck, about your Moxy:

1) Motorola parts or almost any 2-way shop that handles
Motorola srvc. BTW, the Maxar and Maxar-80 low band
are about the same radio.

2) Yes

3) 5 Khz is OK for anything (allmost) above 29.5 Mhz.

4) Wrong split. Most Motorola low band radios came in 3 splits:
30-36, 36-42, 42-50. Look for a 42-50 radio for 6 meters.
I had a friend take a 30-36 radio up to 6 meters, but it was
lot of work and parts changing.

Hope this helps.

360. RCA police radios, tuning to 2-meter band, info sources

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-12 23:41:35 UTC
From: Gary Crum <crum@xmission.com>
Message-ID: <3f4enf$b6v@xmission.xmission.com>
Source record: 221242

Hello, I'm looking for information about some old RCA VHF radios that my friend (ke4ori) was given. They are mobile radios that the Tooele County (Utah) police department used, and can hopefully be modified to operate in the 2-meter Amateur Radio band.

Can anyone help?

I am pretty new to this type of thing. Another friend helped me tune up a Pace mobile radio, but I think these RCA radios use crystals and are not frequency synthesized like the Pace radios. I wonder if there is a way I could get schematics and any other documentation or info, from RCA themselves or other organizations.

These are apparently the radio model numbers:

RCA CMCF70MX - mobile radio, no tubes, separate control head
RCA CMCI?MMRF - another mobile radio, has vacuum tube (final amplifier?)

"RCA7" is also written on one of the radios.

Thanks for any help!

By the way I have TCP/IP running on top of a 9600bps 431.75MHz radio network here in the Salt Lake valley. It works great and now I want to do more, perhaps using some 24GHz transceiver and dish antenna equipment that I picked up. A friend is just now trying to get his 1.5Mbps modem design to work with microwave transceivers and a Gracilis PackeTen network switch -- that sort of thing.

Hello,

I'd just like to know if someone out there could give me addresses of Kenwood, Yaesu or Icom resellers outside France, especially in bordering countries (yes, even U.K. ! :-)), or U.S. The only big reseller in France is G.E.S.(Generale Electronique Services) for that type of devices.

I'd also like to know what price I'd pay for an equipment, and how it compares with french prices for the same thing. For example, a Kenwood TS850SAT is worth about F 16000, which is about $3000... If you could tell me the price for the same equipment in different countries, I'd love to hear (or rather read) it.

Thanks for any answer, here or by Email, which ever you prefer...

Bruno, SWL F11GRC, planning to "upgrade" himself to a real ham soon ! ;-)

Date: 1995-01-13 15:01:57 UTC
From: rogjd@netcom.com
Message-ID: <rogjdD2Cn3A.9HM@netcom.com>
Source record: 221155

I've had my 850S/AT for several years, and used it on SSB, FM, PacTor, Amtor, RTTY and HF Packet. The rig is a real trooper; I couldn't be more pleased with it. The 500 hz filters are great for CW, and the digital modes such as Pactor/Amtor. I have also done computer control with it, which works just fine.

The radio was clearly designed with the digital modes in mind; it has selectable fsk shift and other features useful for the digital modes.

I would not buy any other radio unless I was prepared to step up to one of the $4000+ radios such as the 950SDX or some other money-sponge.

373. YAESU - FT-530 vs FT-51R

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-13 15:30:19 UTC
From: mcc@aimhigh.Corp.Sun.COM
Message-ID: <3f66ab$kk3@jethro.Corp.Sun.COM>
Source record: 221156

Hello everyone, My apologies of this had been discussed before.

I would like to know your opinion(s) between the two HT. At our local ham store,
the FT-530 is selling for $100 less than the FT-51R.
I was told that the FT-530 is an older model and it is being replaced by the FT-51R.

Is ist worth spending $100 more for the FT-51R?

I appreciate any info. Thanks.

>I don't see why you can't use a DTMF encoder/decoder to put
>extra control signals on the coax feeding power and RF.

Good idea! CTCSS encoders and decoders would do to carry TR
signalling, but DTMF would allow you to control other things
on the tower top as well.

>I don't see how you can use a simple resistor to make a common
>base amp linear. Don't you need a negative bias supply that
>can sink the entire collector current? (Assuming the typical
>NPN transistor). To get it to run off 12 volts, most designers
>would end up using a fancy switching power supply.

The base only has to be common for RF. Ok, so that says we
need a resistor *and* a capacitor. That could be a problem
with bipolar transistors, the capacitive reactance has
to be really low. Fortunately that's easier at VHF than at
HF, but parasitic inductances start to raise their pointy
little heads. It's pretty easy with coaxial tubes, but with
transistor packaging, yeah, it's not so easy.

[I said]
>: Well it's true that higher voltage FET amps are often cleaner, however,
>: most of the commercial amateur VHF amps on the market do use 12 volts

>Yes, maybe I'm thinking of people who operate on VHF on hilltops instead
>of valleys. A 200 mile range isn't unusual in a good spot with a small
>yagi. Anyone within LOS out to 60 miles can hear IMD down 70 dB just
>fine.

Maybe. I'm usually dealing with SNRs on the order of 10-12 db. With
IMD down 22 db, that puts it well in the mud. If you can hear IMD
70 db down from the fundamental, aren't you running excess power?
That would equate to a receive SNR of 70 db for the main signal on
the far end. Talk about armchair copy! I'd expect the little IC-202's
front end to fold up from pure fundamental overload if you were

adjacent channel with me under that condition.

>It may not be a problem where you live, but it certainly seems
>to be a problem for those in densely populated areas--one amateur
>with a dirty amplifier can make it real tough for lots of amateurs to
>work any weak signal DX. Actually, it can be a problem anywhere you
>have two amateurs nearby, it just that it is much more likely to happen
>as the number of amateurs goes up. Sort of like the chances of two
>amateurs having the same birthday.

Well it's true that it's rare indeed to find two amateurs operating
simultaneously on adjacent channels within LOS of each other around
here. That could be a problem elsewhere, but here amateurs are few,
and the bands are wide.

From: "Colin Schmutter"
Message-ID: <3f6c8q$38o@chopin.bcit.bc.ca>
Source record: 221162

Hi,

I am using a Kenwood TS-140S that has the modification to unlock transmit on all frequencies. (D29 and D31 disconnected)

However the transmitter will still lock below 1600 Khz.

I was hoping to use the rig as an accurate signal generator as well as an HF rig to align another receiver.

Does anyone know how to unlock the transmitter below 1600 Khz so that I can generate a 455 Khz signal and also the Broadcast signals 550 khz to 1600 Khz?

Thanks

Colin (VE7CQH)

380. Kenwood TS-690 vs Icom IC 736

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-13 17:23:00 UTC
From: milway@tecnet1.jcte.jcs.mil
Message-ID: <199501131847.KAA06875@ucsd.edu>
Source record: 221163

As a no-code tech, I would like to get active on 6M, and at the same time give myself a good reason to upgrade. Both the Kenwood TS-690 and the Icom IC-736 offer HF capability with 6M. My thought is to buy one of these and use it on 6M now, later as my main HF. This thought is also driven by the fact that units with good 6M capability are not all that much cheaper than these 6M/HF units. I would appreciate any recommendations, experience or opinions on this issue. If there were rumors of a low cost 6M all-mode rig in the near future, it would also influence my choice. The ICOM is quite a bit more expensive than the Kenwood and I wondere just what you get for the additional money. In the catalog I have the trade-offs are difficult to quantify. Also, I wonder if there is some other unit out there that I should be looking at.

Fuel pump noise is really loud. Adding capacitance across the leads to the in-talk fuel pump takes it down considerably. Having just recently gotten that part of my HF mobile cleaned up some, I have several other parts to go after. In my case, the vehicle is a 91 pathfinder.

Good luck!

I use a holder intended for cell phones - it has foam on the sides and can be squeezed in to grip the HT on the sides. I think Radio Shack has one on sale right now. The one I have came with optional suction cups to attach to the windshield, which works well. The only problem is that the side grips may trip the PTT if compressed too hard.

: Jerry Ward.
first of all let me suggest you look at the october 93 issue of
BYTE magazine, page 57 article "Keeping Time on Your PC" by Michael Lombardi.
this article addresses keeping time on your pc (DOH!) but also gets into
the accuracy of a pc real time clock. According to the article
the pc clock will generate a interrupt every 54.936 msecs and count these.
Now it can only display multiples of this value so you miss some times.
Thus it drifts 1 to 15 seconds per day with 5 to 6 seconds per day being
typical.

There is also a I'net site listed for some code and info on this
its 132.163.135.130 and you can ftp to it to get program code and such.
I looked at this code awhile ago but never used it.

My personal story is this, i was trying to set the pc clock using a GPS
receiver so that we could keep accurate time with the pc's and synchronize
multiple pc's. This never happened, i had to write some C code to constantly
read the gps time and keep it as the reference (kinda sucks) anyway, if you
really need a accurate clock in your pc i suggest you talk to some of the
companies that sell accurate clocks for the pc that replace the old RTC with
a plug in card and you can even connect this to a GPS receiver to keep it
completely accurate. Such a company is datum, inc try emailing them
at datum.com

also, note that the problem with the clock is based on the accuracy of the
RTC and the bios of the system so it is my impression that this problem
would prevail on any pc, unless you write some code to correct the offset
(which such code is on the above ftp site)

best of luck,
jess

ps the ip address above is alos time_a.timefreq.bldrdoc.gov (hey who better
to get correct time from than NIST?)

Source record: 221175

At a recent Ham meeting, the topic was batteries. The head of the tech dept. at the Geophysical Institute here at the university was the speaker. He discussed at great lenght the various types of batteries, their characteristics and charging techniques. One of the basic points he made was that fast charging is never particularly good for batteries. It will work, yes, but you will reduce the overall number of charges your batteries will allow. The slower charge is not just safer, it is better, and I am sorry but I can't back that up with the technical data. What I have found to be very effective for me is to do an overnight charge with the c/15 charger that came with my handheld, then when I get up in the morning, I throw it in the fast charger and it is topped off, often in 10 to 15 minutes. That way the battery does not heat up at all, which is one thing you want to avoid. If I need a charge quickly, I don't hesitate to use the fast charger, but knowing that it is inherently not as good for the battery, I avoid it when time allows.

> none on the 79. Please mail me if you've got a 79 and if you are pleased with
> it.
> Thanks a lot.

Well, I have had a 79A for about two months now. I enjoy it and appreciate the many features it has, especially:
1) Dual band is nice, especially VxV and UxU which allow reception of two channels within one band.
2) Alpha characters in the channel memories are helpful
3) It is compact and solidly built.
4) I can receive for about 10-12 hours between charges.

I also have a few complaints:
1) no scan lockout on earlier models - I understand that newer ones now have this feature

2) Intermods are a bit of a problem in the city with a moderately good antenna. I live near a Public Service tower and get constant intermod crap walking over the 2m band from the police/fire services.

Mods for the 79A can be found in
ftp://oak.oakland.edu/pub/hamradio/mods/kenwood/TH-79

I don't know how these apply to the european version.

Chuck,

The MOXY comes in three band splits on low band......
Yours is set for the 30-36Mhz range...it is perfect for 10mtrs...cannot be
easily retuned to 6 without MAJOR parts replacement.

Any MOTOROLA shop can get you copies of the manual....they may be happy to LET
YOU copy their manual...
5Khz is what is USED on 10FM above 29.0 Mhz.....you cannot use 5Khz Deviation
BELOW 29.0....but then 29.5-29.7 is where MOST of the FM operation is.

396. RE: ALINCO DR590 MODS

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-14 14:58:30 UTC
From: kn4aq.gary@mms.raleigh.nc.us
Message-ID: <9501141458.0L1D000@mms.raleigh.nc.us>
Source record: 220978

Ne> Does anyone have any modification information for the Alinco DR590?
Ne> Bob, N0HDH

Hi, Bob. If you're radio isn't already receiving (and transmitting) up to 170 MHz on VHF and 470 on UHF, remove the "control head," take the back panel off the head, and find a loop of blue wire. Cut the blue wire (the famous "blue wire mod") and your receive (and transmit) range is extended.

That's the only mod that extends coverage. Although you can get the display to show channels in the 118-136 MHz aviation band, and the 800 Mhz band, the radio doesn't really recive there, and I've never seen a mod to make it do that (missing circuitry, I think).

However, there have been several mods to improve performance of the radio and CPU. Your's may or may not have had them done, depending on it's age. You can check -- if you can step through the memory channels using the microphone up/down buttons, you have the upgraded CPU. If (when in memory mode) the mic buttons start to "VFO" the memory channels (that is, just step up and down in frequency from your memory, and NOT to another memory), you have the old CPU.

There are a few other glitches in the old CPU, so I'd recommend having Alinco make the mod. You'll have to pay for it now -- for a while it was free.

The other mod I'm aware of improves the crossband repeat audio. Originally any audio being repeated by the radio in crossband repeat was very muddy -- all the high's were lost. After the mod, it's much better -- just a little muddy.

That's all I can remember. I'll be watching this space to see if anyone else has a mod I've never heard of. I'm still running a 590 in my mobile. It's been back to the factory several times, but now has a few years of reliable service under its belt.

402. KAM+ & Staying connected.

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-16 04:09:05 UTC
From: Waltk@pica.army.mil
Message-ID: <9501152309.aa11836@COR5.PICA.ARMY.MIL>
Source record: 221182

Can the KAM+ be setup to reconnect after being disconnected by the other station. That is, how does one stay permanently connected to a packet node (VHF) such as a DX PacketCluster(tm) node?

The PacComm Tiny-2 has a CONPerm paramtere that if turned on provides that functionality. The KAM+ RELink command on work when RETries has been exceed, i.e. when the other station failes to respond, the TNC sends a CONnect to re-establish the link.

Many thanx for reading this and I hope someone has the answer.

Source record: 221183

Hi fellows,

I would like to convert a CB rig called President George. Rumors going round that it is easily possible to enlarge the frequency range of that rig with a simple code. This code can be entered by pushing the correct keyboard combination. Furthermore you should be able to read out some software defaults.

Any suggestions??

Thanks in advance!!

Hello all
I have an Icom 737 that I am happy with for the most part but I find
the filters for ssb seem kind of wide band and I pick up a lot of stuff
from above and below the station I am listening to. The if shift doesn't
help too much either. My question is has anyone used those dsp filters
that you see advertised in the ham mags? Are they worth the bucks? Any
comments would be appreciated.

>
>--
>

First, ASK someone on the repeater. Many machines are different, I know
of one case the sequence to bring up the Autopatch is Speed dial for the
Police on another machine.

After you have determined the technic and that the patch is Open and a
club membership is not required.

Always use proper etiquette (boy I need a spell checker)

1. Ask if you can use the autopatch, even if you haven't heard anyone
on for several minutes.

2. If no answer or someone says ok, Announce : KA??? to the Autopatch.

3. Bring up the patch, and dial. Before the ring Identify again. KA????

4. Make the conversation brief, don't air "dirty laundry", if you are
calling a business and they ask to put you on hold, ask if music is
on hold, if so, leave a message, don't stay on hold more than a few
seconds, and announce during this time your call and you are waiting
for a person on hold. (it better be important).

5. Tell the other party immediately you are on the Ham radio and must
not curse, and wait until I am done talking to respond.

6. After the call before shutting down autopatch announce KA??? Bring
down the patch

7. Key down the patch.

8. Announce this is KA??? with 3rd party traffic xxxxxxxxxxxxxxxxxxx

9. (this is most important) Thank every on the air for using the patch.

The common codes to bring up a machine is *89 and to shut down #

Message-ID: <D2IBto.30L@lcpd2.SanDiegoCA.NCR.COM>
Source record: 221191

I currently own a Henry 2K-2 amplifier manufactured around 1970. I am interested in finding out how it compares today's amplifiers. It has a pair of 3-400Z tubes and will put out about 1KW. I am running it on 115V which works OK for sideband, but blows my breaker when I run CW. The Henry doesn't cover 160 meters. Here are some options that I am thinking about:

1. Keep the Henry and feed it 220V.
2. Get an Ameritron ALS600. Less power, but no tuning and runs on 115V.
3. Get a used full legal limit amp such as a Commander, Ameritron, Henry or Alpha and feed it 220V.

Any comments ?

December or January of WORLDRAIDO had a simple interface, and a
bunch of BASIC (ack!) programs to run it. One was even a frequency
analyzer. Someone in your local club probably has this mag.

It was for the FT-747GX, but I think the 767 has the same interface.

I purchased the Yaesu FT11R 5 watt model. The low power model was just
too small. The 5 watt model has the larger battery pack and makes it
just smaller than most of the compact cellular telephones.
Even though it is small, it still has a full size lighted keypad. I am
VERY happy with the radio and I picked it up for about $289.

>the only thing that may operate in severe cold. Thanks.

In Singapore, a leading battery company (Energizer) who sells alkaline batteries has been promoting AA sized lithium batteries.

I took a look at them in the store, and nearly freaked out. A pair of those sell for some almost S$10 (S$9.xx <- I forgot, and just rounded it off...), when compared to 'conventional' alkalines from the same company, the alkalines off the shelf is S$2.80 (Around that value anyway).

Not that this info is really useful to you - just thought you might like to know AA lithium battries are now (more or less) easily available over the counters here... 8)

Rgds!

427. ADVICE- How to use HT mobile...

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-17 04:30:25 UTC
From: GRIDE@UCSVAX.UCS.UMASS.EDU
Message-ID: <3ffh51$rv0@nic.umass.edu>
Source record: 221107

Hello,

I am a newly licensed amateur (N1TOU Sunderland, Massachusetts). I
have an HTX-202 that I have yet to transmit with. I have been monitoring
the local repeaters and I am thinking of joining one. This is one I pass
on the way to work. I can hear it loud and clear (Mt. Tom, Holyoke, Mass)
and I live about 15 miles from it at home.

Questions:

1. What sort of set up do you think I'll need to hit it from home
with 5 watts? Gain antenna? Amp? Can I get by with a ground plane antenna?
You can just about see the repeater antenna in the distance, line of sight.

2. What should I install in my car? Are magnet mounts any good? I
am considering purchasing a Saturn. Do they bode well with 2M radio? I have
heard interference horror stories about some cars...

3. How would I find out about simplex frequencies that are OK to use
in my area? I do not want to stamp on a repeater, packet, or voice net while
calling CQ...

Answers:

If you do not already know about it, try

telnet callsign.cs.buffalo.edu:2000

from your favorite Unix box. Once in, use the help command to see
how you can search your town, your state, or the U.S. for hams.
I was quite surprised to find that my friend's parents were hams!
I never knew!

Hope you can help me... Thanks a lot.

73, DE N1TOU

(Andrew)

429. Need advice on computer controllable HF rig

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-17 05:21:51 UTC
From: swithrow@nyx.cs.du.edu
Message-ID: <3ffk5f$2t5@nyx.cs.du.edu>
Source record: 221109

I just aquired my dream radio site, but unfortunately will not be
able to live there for a while. So, I am looking at a remote HF
station. Complete with multiple antennas, rotator for the beam, and
hopefully a painless radio or telco interface.

I am looking for information on what is the best HF radio to use.
I haven't used a lot of the new rigs that can be controlled via
RS-232 so fill me in. Ideally, I would like to be able to read
out the mode of each function on the radio in addition to controlling
it.

Any citations as to previous projects such as this would also be
greatly appreciated.

Please send replys to: ah441@freenet.hsc.colorado.edu
Thanks in advance for your time.

JL> Has anybody figured out how to make a hanger/bracket for their HT
JL> when they are in the car?

Sure! Get one leather shoelace. Tie it around the belt clip in a very short loop. Cut excess off. Then get a picture hanger made of cloth with a little hook. WalMart. Wash the glue off the back and use miracle glue and glue it to the top of the dash. Works great in a 4x4 in the dirt too! <G>

432. RE: HOW TO USE 2M AUTO P

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-17 07:56:53 UTC
From: kn4aq.gary@mms.raleigh.nc.us
Message-ID: <9501170756.0B5Z100@mms.raleigh.nc.us>
Source record: 221118

>How do you use an open 2m auto patch?
>
>Is there some standard DTMF tone to enable it?
>
>How do you let the repeater know when to hangup?

To the generally good advice in a previous post, I'd like to add one or two modifications:

Ne> First, ASK someone on the repeater. Many machines are different.

Very true - both the technical details and operating practices can vary between repeaters -- even withing the same city.

Ne> 3. Bring up the patch, and dial. Before the ring Identify again.
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
This is one of those individual quirks. If you do it on our machine, the patch will shut itself off.

Ne> 6. After the call before shutting down autopatch announce KA??? Bring
Ne> down the patch

On 146.64 in Raleigh, it's ok to just say "goodbye," kill the patch, and then ID.

Ne> 8. Announce this is KA??? with 3rd party traffic xxxxxxxxxxxxxxxxxxx

This is requested on some machines, not on others.

Ne> 9. (this is most important) Thank every on the air for using the
Ne> patch.

A nice touch, but not required.

Ne> The common codes to bring up a machine is *89 and to shut down #

This is VERY local -- the most common OPEN patch codes are * up, or * + (phone number) up, and # down -- but again, it depends on each and every individual repeater, and the only way to find out is to ask.

I've arrived in some towns, looked up a repeater in the directory and found it listed as "open autopatch," and asked for assistance. No reply. So I just gave the most common procedures and codes a try (with a clear announcement of my call and that I was trying to use the autopatch). Sometimes it worked... and the only people I ever talked to on that repeater were on the phone. Sometimes... nothing. And sometimes the directory was wrong, or outdated, and the patch was closed.

If you're ever in Raleigh, NC, the 146.64 patch is open to all. Please ID loud and clear, and it's all yours.

From: Harrington.Ed@mail.ndhm.gtegsc.com
Message-ID: <Harrington.Ed-1701951116330001@157.176.66.38>
Source record: 221115

I have a nearly brand new handheld Realistic PRO-50 Scanner with a GRE Superconverter (small rubber duck antenna mountable module). The PRO-50 scanner covers the 6m, 2m, and 70cm ham bands, along with the standard VHF/UHF police, fire, medic, and public safety bands. The GRE Superconverter downconverts the 800-900 Mhz band to the 400-500 Mhz band which yields full mobile/base station cellular coverage with no gaps.

I will ship the package in the orignal boxes with manuals for $150.
Please reply via E-mail or call me at 508-880-4292, if you are interested.

Thanks and 73s,
Ed--AA1IN.

437. Auto Patch and 800 numbers

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-17 15:37:17 UTC
From: copeland@fohnix.metronet.com
Message-ID: <3fgo7d$8jn@fohnix.metronet.com>
Source record: 221116

Do autopatches have enough intelligence to allow 800 numbers?

I was thinking one could use a 2m radio while on the road and make
1-800-COLLECT calls if this was possible.

I would guess that autopatches just limit the number of digits one
could dial to stop long distance calls, which would disallow 800
numbers.

>a pair of 3-400Z tubes and will put out about 1KW. I am running it
>on 115V which works OK for sideband, but blows my breaker when I run
>CW. The Henry doesn't cover 160 meters. Here are some options that
>I am thinking about:
>
>1. Keep the Henry and feed it 220V.

This is the preferred solution. If the tube emission is still good,
this will give you the most performance for the bucks. Running a
kW amp off 110 is a no-no. It hurts both performance and linearity.
It is possible to retrofit 160 on this amp, but it's not trivial.

>2. Get an Ameritron ALS600. Less power, but no tuning and runs on 115V.

Why bother? This will barely buy you an S-unit over your barefoot transceiver.
If you're going to use an amp, you might as well get one that will give you
the maximum legal benefit when you need it. (Not that you often really need
an amp at all on HF, of course.) No 10 meters on this puppy either, but the
mod is no biggie.

>3. Get a used full legal limit amp such as a Commander, Ameritron, Henry or
> Alpha and feed it 220V.

Well this is a higher buck way to go. Be careful that the tubes still
have good emission and that the amp hasn't been abused. A CCS rated
power supply will be a major plus. 10 meter coverage will require a
modification on any of these, no biggie.

439. Need Help With Yaesu FLdx400

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-17 16:37:38 UTC
From: pelt@vt.edu
Message-ID: <pelt-1701951138090001@box185.ams.vt.edu>
Source record: 221119

Recently bought an FRdx400 receiver and a FLdx400 transmitter. These twins were the first commercial amateur equipment I ever owned some 25 years ago and I just "had to have them" again.

The problem is when I zero beat the transmitter to the receiver, the transmit frequency is about 800hz below the receive frequency instead of being above the received frequency.

Are there any technical gurus out there who knows how to adjust the vfo on the FLdx400 so that when you zero beat the signal the transmit freq is above the receive freq??? I know there has to be an adjustment, I just can't find it.

Thanks

>N7YNI (No, I am not a no-code, my first license was a coded tech (N7PZG)
and
> I am currently a General working towards advanced, thank you).

So, how much do you want to know about SGC? I have the SG-2000 HF radio and the SG-230 tuner and I'm quite pleased with both. But, you really need to have a good handle on what you expect from a radio before you buy SGC equipment. It is a well built radio with amazingly few parts for what it does, partly due to a very unique (maybe even patented) circuit design. This simplicity should (and seems to) equate to improved reliability. Some dealers will extend excellent prices (about $1450) on the radio since they can drop ship from the factory. Also, if you locate someone that went to the Dayton Hamvention last year, you might find one of their $100 rebate slips for a radio+tuner purchase. Their products are listed several times in "Janes Military Communications", which lends credibility. Some observations:

SG-230 Automatic Tuner:
Hands-down the most flexible autotuner availible for a realistic price.

SG-2000 HF Radio:
Excellent for utility monitoring and channelized operation (the design goal of the radio).
Stability equals or exceeds the best amateur equipment.
Excellent voice squelch and channel scanning capability.
Poor for "cruising" amateur bands because no tuning knob (up/down buttons only).
Minimum synthesizer step 100Hz.
Programming is easy but not intuitive.
Standard AM filter too wide to be considered useful for SWLing (DX anyway). Selectable
sideband ECCS, however, is very good.

AW> I borrowed A Drake TR7 from a very good and long time friend (either
AW> well heeled in electronics, nor a ham). But, after only a few hours
AW> 1/ The rig emits a ticking sound(from the speaker)and nothing else.

Drake had problems with soldering on the TR-7. Some of the hand-soldered joints were cold, and some of the wave-soldered joints were too thin. It's possible that one of these finally gave out in the vicinity of the audio circuitry.

445. Q:2M mobile that is also a repeater?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-17 20:34:41 UTC
From: hgs@wdl1.wdl.loral.com
Message-ID: <hgs-1701951234410001@wdl139.wdl.loral.com>
Source record: 221125
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I know, this is another one of those "opinion" questions, but...

I'm getting ready to purchase a couple of 2 Meter radios for use
in the two family cars (my wife and I are both Tech+'ers), and
we want to get something that's capable of taking a signal from
an HT and re-transmitting it out on another freq which is most
likely either a repeater or the other radio in the other car,
which would be 30-40 miles away...

Get the idea? Something similar to what the Highway Patrol uses
for their communications.

We already have a couple of HTs, but neither of us hit the same
repeater to allow us to talk to the other.

Example:

Radio Transmit Receive
HT 145.235 145.835
Mobile 145.635 145.235
Repeater 145.835 145.635

Are there any radios that can do this? Or are we going to have to
get into the 440MHz range for this?

>For use with CT, NA.

Well, I would prefer the KPC-3 which has a builtin node as well as PBBS.
I bought a Paccomm Tiny-2 about 4 months ago, for about the same price,
and it doesn't have a node, and you can only change the RS-232 baud rate
by changing jumpers (the BAUD command isn't implemented). I wish I had
gotten the KPC-3 instead.

Hi,

I am looking for recommendations for a good frequency counter.
There are a couple of companies, Startek and Optoelectronics, which
make various units with varying specs. Basically, I need something
which usable up to 2.5Ghz, and down to 10 and preferably 1 MHz. The
better the accuracy, the better of course. Any good, or bad, experience
out there?

> I am thinking about:
>
> 1. Keep the Henry and feed it 220V.

This is "highly" advisable with any amplifier running a kilowatt or more.

> 2. Get an Ameritron ALS600. Less power, but no tuning and runs on 115V.

If you want to run less power and tune up quickly then go for it.

> 3. Get a used full legal limit amp such as a Commander, Ameritron, Henry or
> Alpha and feed it 220V.

If you want to trade and/or want to operate 160 with a big signal, then yes,
this makes a lot of sense. Does anyone "really" know why the Henry brothers
were so opposed to including 160 on their amps?

>
> Any comments ?
>

Yes. Build one that does exactly what you want. It is one thing, besides
antennas, that the average ham....well, slightly above average...
can build as well, or perhaps even better than the pros at a significantly
lower cost. You will have to do a lot of research and scrounging and
ragchewing on the subject, but that is fun too. This may take some time.
If you are into instant gratification, go the other route. If you want
a very satisfying ham radio experience, build an amp.....but first, run
a 220 volt line to the shack! :)

For you youngsters, the Atlas 400 is a redo, two and a half years in the waiting, of the old but good Atlas 210 et. al. series of the seventies. After several design changes, Herb, W6?? appears about ready to ship a streamlined version of a single conversion, analog vfo with AFC all band 160 thru 10 mtr dictionary-sized rig which was characterized and hopefully still will be- by a very low noise, no-preamp front-end with full-wave mixer, amp, xtal filter line-up to stand up to the big ones, and selective segment xtal filter to provide three degrees of selectivity. The origonal design was touted for a very steep-skirted filter with I think over 130db skirts and 2.7Khznominal passband which is very good for intelligibility. For the asking price, it could be very competitive and durable; I think extended coverage is achieved by adding external xtal to down-conversion oscillator, just like the old days and I think 150 watts out. The final delay, as claimed in a recent note from Atlas, is to retrofit a relay-type band-switch arrangement since the pin diode switch could not meet the performance standards of good old relays. (Note most modern rigs are using diodes but recent articles by design gurus are badmouthing them as noisy and ringy. My Drake 2B designed around 1959 is still as good at or better than anything I have for general reception; for example it outdoes my KWM-380 at SSB on ten meters, and AM unconditionally.) Back to the subject, the other rig mention is the Patriot, a very unusual design usingphase modulation (no xtal filters) and DDS I think to one Hz for freq generation. I havent heard any reports or reviews, perhaps they too are slow to ship. I would expect this rig to be hi-fi to the max but perhaps a bit noisy and intermod prone. Let's hear from someone with hands-on exposure to this one- the big problem may be that it won't do pactor or G-tor, or will it? 73's.

PRESS RELEASE

JANUARY 17, 1995

WVARA ANNOUNCES WEB PAGE

The West Valley Amateur Radio Association (WVARA) is announcing the development of it's own home page. WVARA joins the ranks of many other amateur radio clubs in having a home page with links to other points of interest to other hams. This includes links to other clubs, the FCC gopher server, all of the amateur radio related UseNet groups and other Web points of interest to hams.

The WVARA home page is run in conjunction with a law-oriented home page, providing links to most legal-related web points of interest.

The WVARA home page can be visited at:
http://www.portal.com/~twise/

For more information, e-mail twise@sparta.sjsu.edu

Travis A. Wise

Does anyone have any info on used comercial radios that can be inexpensively converted to 1.2 gig ham use? I'm also looking for amplifiers (new is ok) for that band (FM).

There are a good handfull of 1.2 gig machines nearby and I think it will be a hot band down the road. While there is alot of 900 Mhz hardware available there is almost no ham equipment there. 1.2 gig has ham equipement but no convertable commercial gear. Go figure :-(

Mobile units obviously have more power, but there are some other differences, including ruggedness, audio output, illumination, heat resistance, etc. I have been using my HT in the manner you described and it works fine, but I also plan to get a "regular" mobile as soon as I can scrape together the change.

If I could get just one radio, especially starting out like you are, I'd buy the HT...it's LOTS of fun to have it portable/walking around, etc. Then you can decide about a mobile later.

The HTX-202 is a great radio, free of intermod that plagues "toy"
radios with wideband receivers. HT's just don't make good scanners;
they don't have enough memories, scan too slowly and are frequently
less sensitive outside the ham bands.

Having said that, you could get a used dual-bander HT for $300 or less.
The Kenwood TH-77 is good, but it has intermod problems when connected
to a decent antenna. Mine cost $250. There was an Icom IC24AT on
the local swapnet for $250, but it only receives on one band at a time.

>73 and tnx.

There's has been several arguments on this subject. I always felt that
placing any kind of filter, a notch, bandpass or DSP, at the
audio section is like washing the dog after he dirties the carpet.

I think it's always better to have the filtering at the I.F.

The only thing you can do is to borrow a DSP from a friend or
get one on a trial basis. If it meets your satifaction, go
for it!

Lindsay, I have the Kenwood TH22AT. I love this little rig. It comes with all
the basic features pl tones, three power level setting(3, 1.5 and .5 watts) 40
memorys +call (total 41), automatic power off plus numerous other menu driven
settings and configurations that you can select to suit. is is small and light
weight. it comes with wrist strap and belt clip. for the money (i paid
$245.00 new from AES at Hamfest) it was a good deal for me. i have received
nothing but compliments about its audio through the repeaters
and i get good battery life from the Ni-cads. There a a lot of accesories that
can be purchased for the Hand held as well. I have the smc-32 speaker mike the
bt-9 alkaline battery pack and the power cord for the cigarette lighter in my
car. all in all I like it..I hope you get lots of response from your post...ed

"PRE-ESTATE SALE" e.g., if I don't get some of these radios out of the Living Room, the XYL will be holding an estate sale!

In listing these fine old vintage items for sale, I am going to hold a "reverse auction," e.g., each week the price will go down until the unit is sold, unless I truly decide I can't live without it. Some are in operating positions now, some I have removed from service and replaced with more recently acquired playtoys, some I haven't even gotten around to playing with yet, and some I bought to use as "parts" units.

I have decided to limit my collection to Drake, Collins, Hammurland, and a few Johnson pieces. Everything else must go.

I need the following Hammurland items to "complete" my collection, and would be happy to work some sort of trade with you, or buy them from you if you prefer:

HAMMURLAND: SP200, HQ145X. Matching speakers for SP200, SP400 and HQ120.

OK, Here is the list as of January 18, 1995:

COLLINS R-390, very good cosmetics, excellent electrical, recently removed from service. When acquired a few months ago, I tested all tubes and replaced several weak ones. New AC power cord. Also seem to remember aligning this one. Original meters. $350.

DRAKE W4 WATTMETER: This one has the copper-plated chassis. Perfect find for the Drake connoisseur who has the earlier Drake units. $60.

DRAKE W4 WATTMETER: This one has the aluminum chassis like the TR4C's and C-lines. $60.

DRAKE LOWPASS FILTER: This is "new in the box" and has the copper-plated chassis. $60.

GONSET GSB100 TRANSMITTER: VERY Excellent cosmetics, excellent electrical. Has to be one of the prettiest transmitters ever made. SSB, CW, 100% AM modulation. Recently removed from service. $195.

GONSET GSB101 LINEAR AMPLIFIER: Very good cosmetics, excellent electrical. Has had the high voltage transformer replaced. Original front panel (seems like people liked to drill holes in the 101's and mount all kinds of switches for some reason).

Perfect match for the GSB100. Uses four 811A's. $275.

HALLICRAFTERS SR2000 HURRICANE AND MATCHING POWER SUPPLY: very good to excellent cosmetics, excellent electrical, recently removed from service. Prior to my acquiring this, it had been sent out for a complete alignment and new 8122 tubes. I think I still have the original bill; it came to over $400. I replaced all electrolytics. I did not have enough 220 outlets when I had her set up, so I ran it off of 120. Power output on high tap around 1200, low tap around 600 or so if I remember right. $895.

HALLICRAFTERS FPM300: Very good cosmetics, excellent electrical, I aligned it, used it for a while, and removed it from service. I seem to remember that the cabinet has some scratches, but the face does not. I have both the AC and the DC power cable. I don't remember if it has the optional fan on it. I think this was Hallicrafters first hybrid transceiver. I looked a long time before I found this one. $350.

HALLICRAFTERS HT32B TRANSMITTER: Very good cosmetics, I only checked it out on 80 meters and it seemed to work fine. I don't remember if I changed the electrolytics or not. Bought it to go with my SX115, but sold the 115. This unit is now an orphan. I already have a spare to go with my SX101A, HT32A and HT33B. $195.

HALLICRAFTERS HT37 TRANSMITTER: Excellent cosmetics, excellent electrical. I seem to remember that one knob has a chip out of it. The cabinet has been professionally repainted and looks great. This is the only transmitter I ever bought that I didn't have to do anything to. $195.

HALLICRAFTERS SX-28 OR 28A: A fellow had these for sale as a package. One had the cabinet, so I bought both units so that I could get the cabinet to use with my other SX28A. One unit has the original transformer missing. Cosmetic condition on both is rough but restorable. (I wouldn't have the patience to do it, however). I'd classify these as parts units unless you are really into cosmetic as well as electrical restoration. There are no drilled holes or dents or anything, just a real neglected piece of equipment. $50 no transformer, $60 with transformer.

HAMMURLAND HQ170'S: I have several HQ170's, 170A's, some with clocks, some without. I'm keeping one and selling the rest. If it has a clock, add $25. HQ170 - $175. HQ170A - $195.

HAMMURLAND HX50 TRANSMITTER: VERY excellent cosmetics, excellent electrical. Removed from service to make room for more Collins black boxes. One of the prettiest transmitters ever made. $195.

HAMMURLAND HXL1 LINEAR AMPLIFIER: Excellent cosmetics, has a replacement meter and one knob is chipped. Excellent electrical. Perfect match for the HX50 transmitter. $295.

HEATH SB610 MONITOR SCOPE: Near mint cosmetics. I bought it from the original builder who was an engineer. Some of the chrome knob inserts have fallen off and I haven't gotten around to gluing them back on; I hope I can find them. $95.

HEATH SB630 STATION CONSOLE, WATTMETER, CLOCK, PHONE PATCH: Near mint cosmetics. I bought it from the original builder who was an engineer. Some of the chrome knob inserts have fallen off and I haven't gotten around to gluing them back on; I hope I can find them. $85.

JOHNSON PACEMAKER: Good cosmetics, unknown electrical. I had another one of these and was sorry I sold it, so I bought this one! I haven't even had a chance to take it out of its cabinet. I remember that there are scratches on the right side of the cabinet and a small dent on the lower right corner, but I don't think it shows from the front. I got $425 for the one I had previously, but I had aligned it, etc. $295.

JOHNSON INVADER 2000 AND POWER SUPPLY: VERY Excellent cosmetics, unknown electrical. I had two before this one, ended up trading them, and this one is the prettiest yet. Just don't have any place for it. Johnson rates it for 2000PEP sideband input, 1000W CW input, and 800W AM Linear input, if memory serves correctly. There were only 386 of these units made. Has separate power supply, of course. $895.

JOHNSON VIKING II: Very good cosmetics, excellent electrical, recently removed from service to make room for a Collins 32V-1. $195.

JOHNSON VIKING THUNDERBOLT LINEAR AMPLIFIER: Very, very good cosmetics, unknown electrical. Recently acquired in a moment of weakness! Intended to pair up with one of my Rangers, but no place for it now with the Desk Kilowatt living where it does. I am sure it needs new electrolytics. Bought it from a ham who got it from the original owner who said it was working FB when he last used it. Of course, I have heard that before! Has the hard to find 220 connector, but I cut the cord off because it was frayed. $475.

NATIONAL NC300: Very good to excellent cosmetics. I can't remember if I changed the electrolytics in this one or not. Thought I wanted to collect National's until I found out how hard it was to find some. Gave up about the same time that I ran out of room. $195.

I'm going to advertise also in Amateur Radio Trader, Electric Radio and QST so look there in case I have forgotten to list some items.

Pick-up is encouraged, but I will ship if you will pay the actual UPS shipping charges. I will buy the boxes, bubble wrap, peanuts, tape, etc.

You can reach me on packet WB4IJN@N4CII, or Internet
wb4ijn@awod.com, or call 803-871-7749. 73, Steve.

468. Sony SW100S Opinions

Anybody got any ideas where I can get some simple info on a Heathkit GR-2700 TV? I lack any docs and can't find the Vert Hold control on a unit a friend has.

If you can't help with the answer, perhaps you might suggest a better newsgroup!

Thanks in advance es 73's

Hello net.
I have a friend who doesn't have net access.
He has a n IC3SR that transmits from 430-440 (Japanese).
Is there a mod that opens the transmit up to cover the US portion
of the band?
Thanks
Roland

I am liquidating my collection of crystals. I have 48 scanner and communications crystals and 24 CB crystals (frequencies listed below). I'm asking for the scanner/communications crystals $25 for the lot plus postage or $1.00 each plus postage. For the CB crystals I'm asking $35 for the lot plus postage or $3.00 plus postage. Take both groups complete and I'm asking $50 plus postage. Will discuss offers, trades for unwanted scanner, etc. If interested, email me at HIRSCHJ@vax2.concordia.ca.

480. KENWOOD TS430 MOD NEEDED

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-19 13:45:44 UTC
From: warren@sniff.shr.dec.com
Message-ID: <3flqe8$el9@sniff.shr.dec.com>
Source record: 221060

Hi folks;

I hope someone out there can help me with a question about
the Kenwood TS-430 HF Transceiver.

The receiver section tunes down to 150khz. I would like to
modify it to tune lower, maybe all the way down to 10hz. It
appears that at exactly 149,990hz some signal (maybe from the
control module) completely shuts off the rf (maybe at one
of the if stages).

My question is does anyone know what signal controls the shut
off of rf below 150khz?

Thanks, and please reply to warren@sniff.enet.dec.com

482. THX vs AC-3/5.1

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-19 17:16:00 UTC
From: claude.suddreth@bgbbs.com
Message-ID: <67.7216.5146@bgbbs.com>
Source record: 221072

I recently began redoing my home A/V setup after about 5 years of use and have come upon some terms and technologies that are completely new to me which I hope somebody out there can explain. If these questions are old news to others I apologize, I just found this group yesterday.

Can anyone out there explain to me the differences and relationships between THX/AC-3/5.1?

I realize that THX is a standard set by Lucas Films for theater sound, and for home sound requires that the 3 front speaker be identical, 1 or 2 subs, and 2 rear surrounds.

I have no knowledge of AC-3/5.1 except that I am under the impression that it is the same as or related to Dolby Surround Digital. Is this correct? Does AC-3/5.1 have this same requirement for speakers as THX, and if not what does it need? I currently have a Dolby Pro Logic setup running through Cerwin Vega's all around and have no desire to purchase a completely new speaker set. Are these compatible with AC-3/5.1?

Also, is AC-3/5.1 strictly a digital format meaning will it be offered on laser disks and such but NOT on VCR's? What about cable (HBO, Cinemax, etc.) broadcasts?

Lastly, which receivers on the market or about to be introduced are designed such that either THX/AC-3/5.1 is built in or alternately can be added via a signal processor at a later date?

Thank you all very much for your help.

483. YAMAHA RXV-1070

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-19 19:11:00 UTC
From: claude.suddreth@bgbbs.com
Message-ID: <67.7218.5146@bgbbs.com>
Source record: 221071

I recently became very interested in the Yamaha RXV-1070 receiver. Does anybody out there have one of these, and if so what are your impressions about this unit? It has several DSP modes concerning I believe 35mm, 70mm, and TV cinema. Are these modes as realistic as the magazine adds suggest? I talked to a Yamaha phone support rep yesterday and he stated that around June or so a RXV-2090 model would be introduced which featured among other things 4 surround channels (2 front/side, 2 rear), output of 110x3 and 35x4, and a "connector" for use with a Yamaha AC-3 signal processor to be released around September. Does anyone have any additional knowledge of this unit or it's surround processor? Oh, and the retail price for the RXV-2090 was supposed to be around $1,495.00. Should I wait for this unit or buy the RXV-1070? Can anyone offer a better / alternate suggestion that I should consider?

Thank you all very much for your help.

I typed this in off the Yaesu mod sheet. If you kill your radio,
don't blame me; I haven't tried it. Enjoy!

YAESU FT-51R

Expanded Transmit 140-174 MHz, 420-470 MHz

MARS & CAP MODIFICATION

This information is authorized for distribution only to
individuals who are members of the U.S. Military Affiliate Radio System,
Civil Air Patrol, or other government agency services specifically
permitted by the FCC to use non-Type-Accepted equipment such as that
utilized in the Amateur Radio Service. Release of this information to
individuals not bearing a license in the MARS, CAP, or other such
government service is not authorized by Yaesu U.S.A.

* Remove Antenna and Battery

* Remove (6) black screws in rear plastic cover plate
(where the battery would normally fit)

* Remove the (1) small black screw in the battery slide switch
(see figure 1 below for screw locations)

* Loosen (but don't remove) the (4) black screws on the upper
back of rear case and slightly separate the rear radio
case.

* Remove the "L" type plastic cover

CAUTION: Watch out for the delicate ribbon cable

* Locate and unsolder jumper pad #6 (see Figure 2 below
for jumper locations) (Pads 1,7 should now be jumpered)
(Stock, Pads 1,6,7 only)

* Reinstall the "L" type plastic cover

* Tighten the (4) case screws on rear case

* Re-install the (6) black screws in rear plastic cover
plate.

* Re-install the (1) small black screw with the battery
slide switch

* Now attach the antenna and battery

* Turn off Radio... Press and hold both UP & Down Arrows
Keys (right side) while turning on the Radio

* Modification now complete!

(Figure 1 not rendered; my ASCII art skills aren't that good)

Figure 2: Jumper locations. For European tone burst, add solder
to jumper 4.

From: ligosa@pipeline.com
Message-ID: <3fnr1r$pj6@pipe1.pipeline.com>
Source record: 221073

I just reciently purchased a New TH78A from AES.
I purchased it because of it's ability to TX out of band (Way out)
for Aux Fire, Searh & Rescue work.
I am told the "Beyond Mars Mod" yields TX 136-179, 400-511 & RX 800 MHz. I
haven't done the mod yet. I am cocerned that since my unit is a later
model serial # 602..... that I may not get all the benefits of the mod. ?
Does anyone know anything about this situation ?

Thanks...

Email please if you can..

510. gus sound card and sm4.15

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-20 15:32:40 UTC
From: wapembe@clark.net
Message-ID: <3fol2o$1l3@explorer.clark.net>
Source record: 221006
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

i found the solution to my sound card problem and supermorse (4.15). first,
a quick recap of events.

i have a gravis ultrasound card (rev 2.4) that was set for base address 240.
the init string for the card was 240,1,1,11,5. this shows, in order, base
address, dma channel (play i think), dma channel (record i think), gus irq
and sb irq. the card works within dos and windows with no problems.

after reading the docs for sm4.15 i decided the init string for the blaster
support should be "A240 I5 D1 T1" for proper use. however, this did not work.

the program would lock-up after i selected the sound card (options->misc menus)
then made a couple of menu choices to select the training type. the only way
to regain control was with a cntrl-alt-del. i did receive a "run time error of
200 at 0F72:2AF6" once. i spent a very frustrating day rebooting my system and
trying various different blaster control strings to no avail. i finally called
the author for his ideas.

the only thing we could come up with was to rejumper the sound card for 220 and
try that. this did the trick. the super morse program is now happily talking
with my sound card.

From: pgsperseng@aol.com
Message-ID: <3fp34u$r1n@newsbf02.news.aol.com>
Source record: 220996

Yesterday I passed my general exam (also got *real* lucky and passed 1C code!), and after a hiatus of some 20 years I'll be back on the air.

I'm looking for equipment but am bewildered and befuddled by the choices out there. To help me narrow down the selections (looking for both a hf transciever base station and a HT), can you people give me an indication of what the most popular rigs are? I realize that a popularity contest isn't a gauge of quality, but if a rig is so popular, it can't be a total disaster, either. Your list will at least give me a first-order approximation of what's worth looking at.

OK, people, any votes on the current most-popular hf transcievers and HTs out there?

Thanks!!

Paul Schreier, ex-N1BWN, ex-DJ0YG, upcoming N1???

I am also interested in the TH79. Do you find its range acceptable during simplex communications, say between two TH79s? What about its range when using it with a repeater? Does the unit require an external antenna to use inside a car? Is this type a setup a viable alternative to a cellular phone for use say in the SF Bay Area? I had a HT CB and I found that without the external antenna its range was very limited, does this also applies to this type of radio?

From: jsoohoo@netcom.com
Message-ID: <jsoohooD2qAz2.2LJ@netcom.com>
Source record: 221003

I'm looking to buy a battery for my base station at home to power my Kenwood TM-742 and am looking for some suggestions on which route to go. Gel-cells or a regular car/motorcycle battery are what I plan get. I would like to see if the folks can suggest the route I should take and tell me what kind of performance I can expect from running on batteries. Oh yeah, what kind of care would I need to take for Gel-cells or Lead-Acid car batteries?

I would run by base station at 5 watts most of the time (I have very good coverage where I live), but in a pinch I would run 10 watts at most.

I looking into this because during the last outage I found that with 5 watts on a rubber duck just doesn't cut it for some of my simplex operations.

Ideally I would want 8 hours of intermittant use on my base.

I would appreciate any ideas or advice.

WANTED: Artifacts, memorabilia, early keys and/or any historical
data, correspondence or information relating to the Vibroplex
Company.

Unfortunately, vibroplex had *NO* collection of keys that
it had manufactured over the years when i bought the company
last year... my modest collection is now the company collection
i hope to build a collection that is representative of all of
the keys that the company has manufactured over the years...
after all, vibroplex is a part of history, and it needs to
be preserved...

i appreciate any help you can give vibroplex in preserving its
heritage...

528. Mods for Standard C1208DA???

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-21 06:09:22 UTC
From: liu@nic.cerf.net
Message-ID: <3fq8ei$fcv@news.cerf.net>
Source record: 221020

vi
I have a Standard C1208DA 2 meter mobile. The receive is very
broad, including 100-250, 400-600, and some of 800 and 900.
It seems that if the receiver is so broad banded it should
receive the locked out bands with some mods. So . . . does
anyone know of mods to this radio? Thanks, liu@cerf.net

529. TH 79A mods for 800 mgz?

Source record: 221005

Can anyone tell me the differences between a HQ170A and a HQ200? I think the HQ200 was a transceiver. But when was it current? What bands did it cover? How did the receiver section compare with a stand alone receiver like the HQ170A? What would the current value of these be?

Any and all information is most appreciated.

Paul

West Marine had one on sale this month for <$300.
Most have a data link out, but I have not seen the spec.
But it probably would not be too hard to decode it.

The map packages that accept GPS input are still expensive.
DeLorme Street Atlas USA has one but its reported to be
over $600...ouch. These have to come down soon, but for
now the limited market appears to be keeping cost up.

The Ham program APRS, will take input from a GPS or LORAN device and
show you a plot of your locaion on a MAP. You can zoom in and zoom
out on a location. It will also broadcast your info so that others
running APRS can be told of your position. You may have to do some
work on the map if you want great detail on a specific location. The
map will let you zoom in to a .25 mile area. It's a pretty slick
program. If I only had $300 for a GPS receiver. :(

>>
I have owned both the 690 and the Icom 736 and the Icom has several
features not found in the 690:
Pass band tuning
1 Hz resolution in read out
Dual band stacking (a big help in rapid QSY,ing)
A tuner that works on 6 Meters
A built in power supply
In addition subjectivly I have found the Icom to be more enjoyable.
Both rigs are good units and you will not go wrong with either

537. HELP! with transverter

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-21 18:16:05 UTC
From: ve3srw@ve3ssf.ampr.ORG
Message-ID: <199501211816.KAA27368@ucsd.edu>
Source record: 221014

I have a 10 meter to 2 meter transverter and I need a power supply for it.
I'm not sure how old it is but it's in "like new" condition.
It's called Magnum Two and made by Polar Electronic Developments in
Liverpool England. The receive converter is a small unit mounted on the back
and made by Microwave Modules. The main transmitting converter is tubes.
There is a cord with an 11 pin tube socket for the power supply.
Trouble is I don't know what voltages are required or to which pin.
I had some info but my wife "cleaned up" my shack and now it's gone.
Does anyone know anything about these units or the manufacturer?
Looking forward to some replies now... Thanks Don VE3SRW@VE3SSF.AMPR.ORG

538. Uniden HR-2600

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-21 19:10:42 UTC
From: jrybak@mesa5.Mesa.Colorado.EDU
Message-ID: <3frm7i$dc9@mesa5.mesa.colorado.edu>
Source record: 221018

Is there a special interest group (support group ????) for Uniden HR-2600 users? I'm interested in finding out some of the mods, etc. to make that

rig even better. I am aware of the articles in this month's QST and the latest issue of QRP Quarterly but I am looking for more. Does anyone know of previously published articles with good info on the HR-2600?

Tnx for your help.

Jim Rybak W0KSD

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-21 19:38:19 UTC
From: Gary Spong <ams39@delphi.com>
Message-ID: <hk2YaOL.ams39@delphi.com>
Source record: 221016

I recently purchased an old Heathkit radio at a garage sale and was
wondering if anybody had any information on it, such as how I can get it
in working order and what it does exactly. I couldn't find a model number
on it but I'll try to describe it. It has a large tuning knob in the middle
with a dial above which has frequencies on it (1420, 1430 etc..). Below
the tuning knob, it says Heathkit, by Daystrom. and below that it says
SSB Tranciever. There are a row of other various knobs at the bottom of the
front panel and some kind of meter in the upper right corner. I have no idea
how old it is but I would guess at least 30 years old.
If anyone is familiar with this machine and can tell me anything about it,
I would really appreciate it. Thanks...

Mark Leeds C/O AMS39

540. VINTAGE GEAR FOR SALE - UPDATE AND ADDITIONS

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-21 19:44:11 UTC
From: wb4ijn@awod.com
Message-ID: <3fro6b$m4c@sumter.awod.com>
Source record: 221015

Listing as of January 21, 1995. Additions to the previous
listings can be found at the end of this list.

"PRE-ESTATE SALE" e.g., if I don't get some of these radios out
of the Living Room, the XYL will be holding an estate sale!

In listing these fine old vintage items for sale, I am going to
hold a "reverse auction," e.g., every few days the prices will go down
until all units are sold, unless I truly decide I can't live without
them. Some are in operating positions now, some I have
removed from service and replaced with more recently acquired
playtoys, some I haven't even gotten around to playing with yet,
and some I bought to use as "parts" units.

Many thanks to all who have helped me make substantial
progress in paring down my collection over the last few days.
My wife also sends her thanks!

I still need the following Hammurland items to "complete" my
collection, and would be happy to work some sort of trade with
you, or buy them from you if you prefer:

HAMMURLAND: SP200, HQ145X. Matching speakers for SP200, SP400
and HQ120, cabinet for SP600.

OK, Here is the updated list as of January 21, 1995:

DRAKE LOWPASS FILTER: This is "new in the box" and has the
copper-plated chassis. (It doesn't do anything a currently manufactured one
won't do, but it sure does look prettier!) $60. Reduced price: $50.

GONSET GSB100 TRANSMITTER: VERY Excellent cosmetics, excellent
electrical. Has to be one of the prettiest transmitters ever
made. SSB, CW, 100% AM modulation. Recently removed from
service. $195. Reduced price: $179.

GONSET GSB101 LINEAR AMPLIFIER: Very good cosmetics, excellent
electrical. Has had the high voltage transformer replaced.
Original front panel (seems like people liked to drill holes in
the 101's and mount all kinds of switches for some reason).
Perfect match for the GSB100. Uses four 811A's. $275. Reduced
price: $259.

HALLICRAFTERS SR2000 HURRICANE AND MATCHING POWER SUPPLY:
very good to excellent cosmetics, excellent electrical, recently
removed from service. Prior to my acquiring this, it had been
sent out for a complete alignment and new 8122 tubes. I think I

still have the original bill; it came to over $400. I replaced all electrolytics. I did not have enough 220 outlets when I had her set up, so I ran it off of 120. Power output on high tap around 1200, low tap around 600 or so if I remember right. $895. I have an offer -- can anyone beat $750?

HALLICRAFTERS HT37 TRANSMITTER: Excellent cosmetics, excellent electrical. I seem to remember that one knob has a chip out of it. The cabinet has been professionally repainted and looks great. This is the only transmitter I ever bought that I didn't have to do anything to. $195. Reduced price: $179.

HAMMURLAND HQ170'S: I have several HQ170's, 170A's, some with clocks, some without. I'm keeping one and selling the rest. If it has a clock, add $25. HQ170 - $175. HQ170A - $195. Reduced prices: $165 and $185.

ANOTHER HAMMURLAND HQ170: This one has paint spilled on it. I don't think there is any on the front panel, just the cabinet. Same story, was supposed to work, but I've never tried it. $65.

HEATH SB610 MONITOR SCOPE: Near mint cosmetics. I bought it from the original builder who was an engineer. Some of the chrome knob inserts have fallen off and I haven't gotten around to gluing them back on; I hope I can find them. $95. Reduced price: $85.

HEATH SB630 STATION CONSOLE, WATTMETER, CLOCK, PHONE PATCH: Near mint cosmetics. I bought it from the original builder who was an engineer. Some of the chrome knob inserts have fallen off and I haven't gotten around to gluing them back on; I hope I can find them. $85. Reduced price: $75.

JOHNSON PACEMAKER: Good cosmetics, unknown electrical. I had another one of these and was sorry I sold it, so I bought this one! I haven't even had a chance to take it out of its cabinet. I remember that there are scratches on the right side of the cabinet and a small dent on the lower right corner, but I don't think it shows from the front. I got $425 for the one I had previously, but I had aligned it, etc. $295. Reduced price: $275.

JOHNSON INVADER 2000 AND POWER SUPPLY: VERY Excellent cosmetics, unknown electrical. I had two before this one, ended up trading them, and this one is the prettiest yet. Just don't have any place for it. Johnson rates it for 2000PEP sideband input, 1000W CW input, and 800W AM Linear input, if memory serves correctly. There were only 386 of these units made. Has separate power supply, of course. $895. I have an offer of $795 and I pay the shipping -- can anyone beat that offer?

JOHNSON VIKING II: Very good cosmetics, excellent electrical, recently removed from service to make room for a Collins 32V-1. $195. Reduced price: $185.

NATIONAL NC300: Very good to excellent cosmetics. I can't
remember if I changed the electrolytics in this one or not.
Thought I wanted to collect National's until I found out how hard
it was to find some. Gave up about the same time that I ran out
of room. $195. Reduced price: $185.

Additions to the original list follows:

B&W 5100 TRANSMITTER: Beautiful cosmetic condition! Have had it
for a couple of years, but I guess I'll never get around to putting it on
the air.The original owner was a CW operatior, so he took the modulator
unit out so the filaments wouldn't run! Of course, he kept the modulator
and of course I have it. He also removed the 75 ohm lowpass filter and
converted it to 50 ohms but he wouldn't give that to me. $250. Just
added to the list so no reduction in asking price as yet.

COLLINS 75A-4 RECEIVER: ABSOLUTELY BEAUTIFUL! I have three,
will sell one and start my asking price at $995. I don't think they are
worth it either, but if somebody wants it bad enough, I'll sell it since I
don't have it paired up with anything anymore. Includes the 3.1 KC filter
and has the reduction knob. I checked with a Dave Kamlin at Wireless
World (800-900-0523) for the going price of 75A-4's. Based on what he
said, I don't think I'll not be lowering the price on the A-4. And I'll only
ship it to the lower 48 or to Alaska. I've heard that Hawaii is a node for
overseas collectors, and prefer for this rig to stay in the USA. Also,
no calls from surplus dealers in or around Nebraska, please.

COLLINS KWM-2A & 516F-2 TRANSCEIVER AND POWER SUPPLY:
Winged emblem, excellent electrical condition, recently aligned and
re-tubed (about a year ago when I bought it). Front panel excellent,
the cabinets have been repainted and look fine (I didn't do it), but should
be redone professionally to make it true collector quality. $825.

TMC GPR90RX RECEIVER: Rack mount. Very good to excellent
cosmetic condition, excellent electrical condition. This is the very rare
unit that has the crystal oven. $750. (Have been offered $600 but I
think it is worth more).

Pick-up is encouraged, but I will ship if you will pay the actual UPS
shipping charges. I will buy the boxes, bubble wrap, peanuts, tape, etc.

You can reach me on packet WB4IJN@N4CII, or Internet
wb4ijn@awod.com, or call 803-871-7749. 73, Steve.

Source record: 221027

I've done the beyond MARS mod, I don't really care for it. I'm going to switch to the MARS mod as soon as I have time to get it done. The Beyond MARS mod automatically puts an offset on ham freqs, meaning that after I accdently dumped my memory and tried to input my main repeater freq, it wouldn't take 146.760, it shows at 146.7625. Also, the hi-band VHF on the right VFO took a noticable nose dive. I monitor the local PD on there, and I started getting a lot of ignition noise and such, when using it in a mobile setting, the left side works fine. The right side didn't have this problem before.

Most FDs use freqs that will fall within the MARS mod, as well as a lot of the search and rescue. I'd reccomend just doing the MARS mod, unless you really need the expanded coverage. However, if you do the Beyond MARS, don't expect miracles.

549. Need Collins Filter Info

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-22 02:16:56 UTC
From: azoth@netcom.com
Message-ID: <azothD2sBo9.FMn@netcom.com>
Source record: 221029

I need some info on a pair of Collins filters I recently inherited. The
part numbers on the cans are:

526-9694-010-8615 and
526-9690-010-8207

These are 455 kHz mechanical filters. What I'm wondering:

What are their specified bandwidths, shape factors, in/out impedances, etc.?
What gear were these made-for/used-in?
What are they worth?

Any information would be greatly appreciated. TIA!

Cheers es 73

550. Yaesu FT51r LCD speaker mike question

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-22 02:39:50 UTC
From: kino@uhunix3.uhcc.Hawaii.Edu
Message-ID: <D2sCqE.A0z@news.hawaii.edu>
Source record: 221038

Yaesu has an optional speaker mike with an LCD display for the 51r. Their ads claim that it can control both the volume and frequency selection on the 51r. Anyone have any experience with these features?

The LCD mike seems to have only one set of up and down buttons. Does that mean that there's another button to push to toggle between volume and frequency selection?

Thanks. Jensen KH6IFZ

Great plan. I'm amazed that so many $800 monoband rigs are sold. I'd
also look at the Kenwood TS-680S on the used market. The '680 is to the
TS-140S what the TS-690S is to the TS450S. Basicly it's a TS140S with the 6
meters band added. Expect to pay about $800 used for a clean one.

Subject: HELP- IDENTIFY THIS LINEAR AMPLIFIER
Newsgroups: rec.radio.amateur.misc,
rec.radio.amateur.homebrew,rec.radio.amateur.equipment Summary:
Keywords:

Few months back somebody gave me a linear amplifier for 10m. It is a solid state unit. I accidentily applied high power input signal to it then recommended. As a result of which the input circuit of the amplifier was destroyed. Some of the pcb connections were also burnt. I don't have any technical information about this amplifier. There is no company name on it but the guy who gave it to me, told that it is a USA made amplifier. The only inormation about the amplifier on its box is its model which says TX500. It contains four Toshiba power transistors. I was wondering if some body out there can provide me with more information about this unit. Even if you know about the company that will work for me. Appreciate any replies in this regard.

>What exactly is the difference between a HT and a mobile unit?
>I've got my Tech (no code) and am looking to purchase a radio that I could
>use in my car while I work and also have it handy to carry around.

Well, let's start with:
a) more power - and no need to change the battery (grin)
b) a more efficient antenna to get the power into the air
c) easier to use (no tiny keyboard with ump-teen functions per key)
d) a receiver that can be heard in a car - in my case a external
speaker on a HT is _barely_ usable.
e) and the most important: a decent receiver
f) much more rugged - I've had to recase my HT batteries 3 times
when they break at the slide-in mount on the radio.

I'm currently using a Yaesu 727 duobander as a mobile, with a Larsen
duobander antenna on a mag-mount. I've pretty much had to give up
listening to the local 2m repeater due to the paging transmitter crud.
I end up listening to the local 440 repeater, and switching to 2m only
to call in traffic problems (the local 146.82 box has a volunteer monitor
crew 24hrs/day for 911 type calls).

For your first radio, by all means get a HT. It will serve you as
a base radio, a mobile, and as a portable. But it will be a compromise
on the first two.

For mobile work, get a speaker-mic. Build a 12v adapter so you don't
run your portable battery down. Use a decent antenna - a punch-mount is
preferred as a mag-mount depends on capacitive coupling to the car body,
and that adds more inefficiency - and 2-4w into a punch mount will
outperform the same power into a mag-mount any day. I've not used
glass-mount antennas but I've been told they are just as bad as
mag-mounts. I personally am sold on the Motorola "NMO" mount.
My old Volvo wagon had 5 on it - and a friend's Chevy Suburban has 4.
Absolutely everybody in the mobile antenna business makes antennas for
that mount, and it's flat from 25mhz-1300mhz. It's extremly low
profile, and you can unscrew the antenna quickly for car washes, etc.
The only negative is that it has a teflon washer in it that tends to
oxidize if left unprotected in teh sun for a year or so. So buy
the grey cap when you buy the mount and screw it on when the antenna
isn't. And if you are worried about resale value of the car, put the
mount in the trunk lid, use it for ham radio, then when it's time to
sell the car or trade it in, then buy a cheapie cellphone antenna,
screw it on the mount then trade the car in. A permanent cellphone
antenna (at least according to my salesman neighbor) doesn't hurt

the value.

A speaker-mic will also be a blessing on a public service event - my speaker-mic has a clip on the back that I can clip to my jacket lapel and I can hear the radio just fine, and talk into it just by flipping the mike up to my mouth and squeezing the button, then dropping it when done. Make sure the speaker-mic case has an earphone jack on it (or drill the case and add one) - it's embarrasing to be called and not hear it becuase the local high school band is passing you at that moment. A cotton plug in one ear and a earphone in the other works just fine.

Howdy.

The FT51 mod posted earlier mentions getting the European 1750hz tone burst by jumpering solder pad 14. Does this mod take any feature out of the radio, like, say, automatic repeaters shift? And to use it, do you use the monitor button? Or what?

By the way, I just got my FT51 on Friday and I love it. ... Well, mostly love it. It's not quite so friendly to blind guys as is the FT530, but it is mostly. The unfriendliest part ofr me is the setup menu, which requires that I get someone sighted to help me with it, and the battery save (same). However, these features are things one should only have to set once... The rest of the features (subband, frequency entry, memory programming, PL tone, PL tone scanning, and so forth) is about like the FT530. One thing that I really like is that you can set the CTCSS page ringer and the DTMF page ringer to send cw, which is cool...the CTCSS pager will send the frequency of the tone being transmitted in cw (!!!!). This is infinitely handy, as now I can know the PL tone of a repeater or whatever, without asking someone else what it is. Really kuil. And I like that the UHF band beeps higher than the VHF band. Spiffy radio.

Ramsey kits aren't great, but it gives you a convenient starting point.
A friend gave me his PA-10 amp after it died for the third time. The
heatsink is minimal, which can be fixed. The output filtering on this
class-C amp is pretty much non-existent, which can be fixed. The
preamp transistor overloads with a mag-mount 1/2 wave in a suburban
location. It's fixed by removing it.

On the other hand you get a ready made PC board, 80-90% of the parts,
and for a extra price, a matching case. Some kits even include the case.
Think of it as a convenient way to get that next project going. Much
easier than buying parts from eight different mail-order suppliers.

Steve,

I have the Yaesu FT-41R. I love it. For such a little gadget it has more features than I will ever use (DTMF paging etc.) I especially like the named memories.

I find that intermod is no worse than any other hand held I have ever owned.

The small size means I can carry it with me whenever I want. I did not do this with the larger HHs I have owned.

If you have specific questions just let me know.

Bill

What is the difference between night and day ?
You can use an HT as a weak mobile substitute, but don't expect a lot of coverage with an HT in a car. Use an outside antenna, sure it helps, but
the power difference is quite different. 3-4 watts vs 25-40, your looking
at a 10 db difference. You'll hear the repeater, they may not hear you.
Buy an amp, your power goes up, so does the expence. Now your HT has
an amp hanging on the back, a speaker mike, RF cables hanging from the
back.
HTs are practical in there own way, but a good mobile, they ain't.

I have two of the th78a (older unit). For a while one was modded beyond Mars and one stock. I noticed no difference between them as far as reception goes (within the ham bands). Modding shouldn't change reception quality as you are not changing filters just the limits that the microprocessor allows the VFO's to tune. If you are having troulbel after mods check the way your resoldered the shield and reassembled the radio. On my units VHF Hi on the right side is really sensitive. NOAA weather 166? really comes in hot.

The New th78a has a different mod procedure than the old th78a. The diods are different and you have to cut a jumper wire on the new ones in addition to removing a diode (or two for xband repeat.)

Your radio can be made to receive out of band and not transmit The old ones cannot.

Transmitting out of band to communicate with FD etc is not allowed with this unit even if you are licensed for those channels. FCC aside SWR on those frequencies with a ham antenna will be high and might damage the radio.

I am not sure about the offset thing but I suspect that it was a function of resetting the radio's defaults not the modification.

Hello Everyone,

The W8YY Winter Carnival Special Event Station is being set up for
this year. As of now we are planning to operate W8YY for 24 hours
straight from Thursday Feb. 2nd until Friday Feb. 3rd. The times will be
from 6am Thursday to 6am Friday. The following frequencies will be used:
>From 6am to 6pm Thursday, 14.255 Mhz. From 6pm to 11pm Thursday, 7.255
Mhz. From 11pm to 4am Friday, 3.805 Mhz, and the last 2 hour will be held
on 7.255 Mhz again. We will also be monitoring 146.58 Mhz during the
operation period. Anyone wishing to contact us via Packet can log in on
144.09 Mhz to the MTUBBS. Certificates will be awarded to all stations
contacting W8YY during this period. Please send a large self
addressed stamped envelope, certificate sized if you don't want any
creases. The certificate is 8.5 x 11 inches.

From: gwb@ucssun1.sdsu.edu
Message-ID: <3g0p7v$ptm@pandora.sdsu.edu>
Source record: 220964

I am looking for information on the "last" Gonset 2 Meter power amplifier that was built. The amp used 4X150 or 4X250 and had an output of 150 or 250 watts.

I remember it was physically little larger than the old 826 tube amp that Gonset sold. The amp didn't have a window to view the finals like the 826 device had.

Any old timers out there have the model number to this amp, or perhaps one covered with two inches of dust and still kicking about in the corner of the shack.

Thanks, Greg

I have a 741 also. As far as I know, there isn't a mike gain control
on the rig. There _is_ a deviation control inside the rig, but
that may not need adjusting. I suggest talking across the mike rather
than straight into it. This is what I have to do with mine. I
hold it an inch or two away from my mouth at a right angle. There is
less 'breath noise' doing it this way too.

Hope this helps.

While I was at WSU, I examined for a few weeks a radio collar that the U of I
(Moscow, ID) people were using at the time for tracking cougars in Idaho.
That might be someplace to start. The guy I borrowed it from was the
licensee of the WSU amateur radio club, but can't remember his call.
The club's call is w7yh, and I have a URL for their club if you want it.

I also know about a LARGE project in Oregon in the Starky area, where they are
automatically tracking elk movements by computer.

Good Luck,
Curt, WE7U.

I have found that charging in just the opposite order works better for me (heating issues on life span aside). I find that the rapid charge (using neg delta-V for rapid charge cutoff) leaves my ni-cd's at something less than 100%. My guess (never measured the discharge ability to be sure) is that it takes them to about 90-95%. If I leave them in the charger to trickle for an additional hour or two, I get more time out of them. Incidently, this is the same thing I saw in Motorola's notes about their ni-cd cell phone battery rapid charger, it said to leave them in for a while after the rapid charge LED went back to trickle.

As for battery life, when I only owned the 15 hour plug in charger that came with my HT, it got about 150 cycles out of the battery (once a week for about 3 years). Since I've bought the rapid charger, I've had the same battery for about 3 years now, and it's still working fine. (Yes, it may die tomorrow, but I at least didnt' see a dramatic decrease in life by rapid charging). To the contrary, at least now I never forget about a battery, and leave it on slow charge for an entire weekend, since the rapid charger cuts out on it's own. This may be worth more than any damage I do by rapid charging. I also don't fully drain it and risk reverse charging the cells, since I can partially charge it some times, and the charge circuit cuts out at full charge.

John,
Well put. I always cringe when people suggest that the HT is the
ultimate, universal transceiver. Its a handheld, its a mobile, its
a base station, its a floor wax AND a dessert topping.

IMHO, an HT is a luxury item. One that I've treated myself to for many
years... only AFTER I owned a real mobile rig

Bob

(There, I feel so much better now. :-)

P.S. You forgot to mention how poor HT receivers are ("intermod"),
which especially shows up when real antennas are connected to them.

I am interested in how others are doing these connections in general (with
the MFJ as well as other units: i.e. homebrew units, other manufacturers,
etc.) as well.
Please post your responses here for all to see. Thanks.

Q Does anyone know if there is a mod to enable 800 mgz on the th-79a
Q any help would be appreciated. Thanks

There is a front end for 800MHz (which is actually quite sensitive!) in
the board, but in the A model there are no parts. In E model parts are
there. Probably 800MHz band is not allowed for listening in the States
(cellular?)

So far, I have only heard rumours about the 800MHz coverage on the TH-&79
European model. Are there any Europeans out there that can confirm this?
I have the A model, although located in Europe. I cannot find anything on the
schematics that would suggest 800 MHz capabilities. Nor can I find room
for anything extra inside the unit. Also - 800MHz coverage would have no
practical use here, as far as I know.

What is the difference between night and day ?
You can use an HT as a weak mobile substitute, but don't expect a lot of coverage with an HT in a car. Use an outside antenna, sure it helps, but
the power difference is quite different. 3-4 watts vs 25-40, your looking
at a 10 db difference. You'll hear the repeater, they may not hear you.
Buy an amp, your power goes up, so does the expence. Now your HT has
an amp hanging on the back, a speaker mike, RF cables hanging from the
back.
HTs are practical in there own way, but a good mobile, they ain't.

I have found that charging in just the opposite order works better for me
(heating issues on life span aside). I find that the rapid charge
(using neg delta-V for rapid charge cutoff) leaves my ni-cd's at something
less than 100%. My guess (never measured the discharge ability to be sure)
is that it takes them to about 90-95%. If I leave them in the charger to
trickle for an additional hour or two, I get more time out of them.
Incidently, this is the same thing I saw in Motorola's notes about their
ni-cd cell phone battery rapid charger, it said to leave them in for a
while after the rapid charge LED went back to trickle.

As for battery life, when I only owned the 15 hour plug in charger that
came with my HT, it got about 150 cycles out of the battery (once a week
for about 3 years). Since I've bought the rapid charger, I've had the
same battery for about 3 years now, and it's still working fine. (Yes,
it may die tomorrow, but I at least didnt' see a dramatic decrease in
life by rapid charging). To the contrary, at least now I never forget
about a battery, and leave it on slow charge for an entire weekend,
since the rapid charger cuts out on it's own. This may be worth more
than any damage I do by rapid charging. I also don't fully drain it

and risk reverse charging the cells, since I can partially charge it
some times, and the charge circuit cuts out at full charge.

From: gwb@rohan.sdsu.edu (Greg Bailey @ SDSU)
Subject: Gonset 2M Power Amp

I am looking for information on the "last" Gonset 2 Meter power amplifier
that was built. The amp used 4X150 or 4X250 and had an output of 150 or
250 watts.

I remember it was physically little larger than the old 826 tube amp that
Gonset sold. The amp didn't have a window to view the finals like the
826 device had.

Any old timers out there have the model number to this amp, or perhaps
one covered with two inches of dust and still kicking about in the corner of
the shack.

Thanks, Greg

I have a 741 also. As far as I know, there isn't a mike gain control
on the rig. There _is_ a deviation control inside the rig, but
that may not need adjusting. I suggest talking across the mike rather
than straight into it. This is what I have to do with mine. I
hold it an inch or two away from my mouth at a right angle. There is
less 'breath noise' doing it this way too.

Hope this helps.

Hello Everyone,

The W8YY Winter Carnival Special Event Station is being set up for
this year. As of now we are planning to operate W8YY for 24 hours
straight from Thursday Feb. 2nd until Friday Feb. 3rd. The times will be
from 6am Thursday to 6am Friday. The following frequencies will be used:
>From 6am to 6pm Thursday, 14.255 Mhz. From 6pm to 11pm Thursday, 7.255
Mhz. From 11pm to 4am Friday, 3.805 Mhz, and the last 2 hour will be held
on 7.255 Mhz again. We will also be monitoring 146.58 Mhz during the
operation period. Anyone wishing to contact us via Packet can log in on
144.09 Mhz to the MTUBBS. Certificates will be awarded to all stations
contacting W8YY during this period. Please send a large self
addressed stamped envelope, certificate sized if you don't want any
creases. The certificate is 8.5 x 11 inches.

I'd have to agree, Carl.

I've purchased several of their kits, and have on the balance had few
troubles. While some of them aren't nearly as glamorous as they sound in
their catalog (the FM receiver and SCA adapter kits, for example, are best
skipped in favor of the better-performing FM Atlas/Bruce Elving options), they
do work provided the instructions are followed carefully.

I've not played with any of their amateur radio kits, but the ones I have
purchased and assembled were entertaining and functional.

Date: 1995-01-24 16:58:53 UTC
From: george@news.epix.net
Message-ID: <3g3bkd$4i9@grape.epix.net>
Source record: 220985

I have for sale or trade my beloved Drake 4-B twins.
This fine rig has in the past year DXCCed, WAS and helped put my team as
#1 Multi Multi in the PA QSO party.
And it is in near mint condition.
Has Xtal sets for Lo 10 meter and 160 meter opperation a spare set of
matched finals and a new driver tube.

This would make an excelent novice - General rig. or as a spare for when
that fancy Japanese setup fails and you can't fix it.

Price $350 + shipping

Will trade for 2 * 3/500Z amp Heatkit, Swan Drake you name it.
Would also consider dual band vhf/uhf rig
or all mode 2meter vintage ok.
Please reply via E-mail
GC

: >comes on, (no signal present on other radio), and then the TX goes off,
: >with me still pressing the ptt. Anyone else have such a problem?

Actually Rob, this is not a problem. The VCO will not lock at that frequency. Although whoever sold you the radio said it would transmit up there, I'm sure Yaseu would never admit that. I did mods on many FT-530's and got so many questions about the TX range, I finally tested one and found that it will indeed transmit to 470 mhz, but the power output drops to milliwatts. The transmitter has a tight passband for the amateur band, and power drops off exponentially outside the band. I should add my discalimer that the radio is not type accepted for operation outside the amateur band. Since I no longer work for Radio City,(quit to go to college) though, I say... Knock yourself out!

Jim N0WMR x - amateur radio tech.
: Make sure you don't have any repeater offset turned on. A little
: experimentation with an FT-530 around here shows that it does transmit,
: unless you have positive repeater offset which causes the TX freq to be
: over 470MHz.

If it really is a carbon mic, not a crystal, try tapping on the element
to bring it back to life. Over time the carbon becomes compacted and
output becomes nil. By tapping it, sometimes very hard, you can
sometimes revive them. I've don it with dead telephone mic elements.
But if its a crystal mic, which I believe it may be, this wont work: >Get a
series resistor and put like 10 volts to start on the mic in

613. Pro46, Pro2026, HTX202 4 sale

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-24 17:23:04 UTC
From: stewart@crl.com
Message-ID: <3g3d1o$sk@crl9.crl.com>
Source record: 220987

I've got two scanners and a two meter radio for sale.

The Pro 46 is a hand held scanner with 100 channels, 800 Mhz coverage and IS cellular restorable. Great shape - $150.

The Pro 2026 is a mobile scanner with 100 channels, 800 Mhz coverage and IS cellular restorable. Great shape - $160.

The HTX-202 is a two meter radio with all the bells and whistles. CTCSS (subaudible) tone encode and tone squelch. DTMF tones and 5 DTMF memories, 16 frequency memories, etc, etc. MUCH better recieve than on my Yaseu 530! Asking $160.

E-mail me if you are interested in any of the above.

Stewart

PatrickMY (patrickmy@aol.com) wrote:
: I am deciding between the TH 79A and the FT 51R. Anyone have any
: experience or have any info comparing both rigs? Reply here or e-mail to
: patrickmy@aol.com.

: Thanks in advance,
: Patrick KB2STB

I used to have a TH-78A which I exchanged for a TH-79A (mistake) which
I exchanged for a FT-51R.

The TH-79A has a couple of real problems:

No memory channel lockout.
Abysmal intermodulation performance. It is about as bad as the TH-78A.
Unusable display backlighting, especially compaired to the TH-78A or
FT-530.

I originally purchased an FT-530 when my TH-78A had to be repaired for
the third time. Later, the TH-78A made a great T-Box radio. I figured
the TH-79A would be even better but was greatly mistaken. I now have a
FT-51R and a FT-530. Between these two, I think I like the FT-530 better
but only because the FT-51R does not have an external power jack which
makes charging the batteries inconvenient.

Source record: 220896

I have a MFJ 940 Antenna Tuner which handles 300 watts RF and tunes the 10-160m ham bands. The reason I am selling this unit, which works just great, is to upgrade to a more expensive tuner with more features. Note, this unit can also be used as a receiver tuner for SWLing.

I will ship the unit with manual for $50, including shipping. The unit is in mint condition. If you are interested, contact me via E-Mail or call me at 508-880-4292.

Thanks and 73s,
Ed--AA1IN.

618. Who Needed an 8072 Tube for a UHF repeater?????????

Newsgroup: rec.radio.amateur.equipment

619. FT-470 - 440 side dead, need advice

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-24 20:25:30 UTC
From: hcooper@moons.sim.es.com
Message-ID: <3g3nnq$epi@moons.sim.es.com>
Source record: 220993

We have a FT-470 dual band HT, with the 440 side dead. Looking over the block diagram & schematics, I tend to rule out the control board and IF board only because the 144 side works OK, and the thing will display a 440 band frequency.

The 440 side has a seperate little antenna switch module - has anyone ever seen one of these go bad? If the APC (antenna protection circuit ?) is active, would it kill both rx and tx, or only tx? I figure it must be either the PLL or this switch unit, but before shotgunning, I thought I'd ask the net.

Its a little tough to look at the PLL output with all the other boards connected as well, but I suppose I should get to the other side and put a scope on it.

Any comments or experiances, please email to hcooper@es.com

This Metal plate is just a metal plate. It is grounded to the
radio chassis and if you get shocked on it, that means you have
that much voltage on the chassis of your radio too! You need to
have a good ground for your radio. Also, this shock is usually
indicative of other problems, like an unbalanced antenna (i.e. a
vertical without the coresponding ground plane.
How does this voltage get there? I had this problem, and
I found out that because the antenna wasn't properly hooked up
and resonating (with it's corresponding ground plane and all)...
you get transmitting currents flowing back down the outside shield
of your coax...to your radio chassis. Thus the need for a _GOOD_ ground.
If you are using the internal antenna tuner of the radio (if it has
one), you defintely need a good earth ground for the rig- as it
cannot perform its function without it. Also, if you have this

voltage on the case of your radio, it _may_ result in other damage to your radio. I have noticed on radios that have this problem, that you will sometimes get bit just by touching a control knob, and even a knob getting really warm or even hot! These are danger signs.
By the way...you need to keep your ground as short as possible so that it doesn't become part of your antenna system (this is especially true if you are using an antenna tuner). Also, put some sort of grounding braid in for your connection to your ground rod. This will make your ground circuit less inductive and will look like a better AC short to those High Frequencies, which is what you want. There is some discussion going on right now in rec.radio.amatuer.antenna about installing ground rods and various methods for doing so...and their performance. You might find it interesting reading and some helpful tips.
Good luck!

I don't know much about the 51r, but if the volume is a toggle button on the control....with the up/down as the controls....its probably just a matter of assigning the volume button to the USER defined button on the mike. The default is band switching on the FT530....you just hold the button down when you turn the radio on, and you can set it to any other button on the unit. I once set it to DTMF 9....not because I needed the 9, but F/M-9 is the swap function...and the light button on the mike also does 'F/M'.

Funny, I can't remember what the other three buttons on the mike are.....I should tear the house apart looking for it again....last time I found the mike for a handheld that I had long sold off....8-)

In article <3fp85j$njo@inn.synoptics.com>, jgomez@synoptics.com wrote:

> I am also interested in the TH79. Do you find its range acceptable during simplex communications, say between two TH79s? What about its range when using it with a repeater? Does the unit require an external antenna to use inside a car? Is this type a setup a viable alternative to a cellular phone for use say in the SF Bay Area? I had a HT CB and I found that without the external antenna its range was very limited, does this also applies to this type of radio?

Hermano: I have a 79 (2.7 W on 2 Mtrs) and the simplex range between it and my TH 22 (3 Watts) is around one to 2 miles under good conditions. It definitely requires an external antenna, although in a pinch you can get a line of sight thru a window, but the signal is noisy. With the external antenna, you can compete with the big rigs - very nice and clean.

I have found that I need an intermod filter (Tucker, who has an 800 number, makes one) in an area of much RF like my birthplace, SFO. But with this setup, and with repeaters, you could easily communicate with other hams in the bay area and probably a lot farther than that. My brother lives in SACTO and regularly talks to RENO and Lake Tahoe on a link. Here in Seattle we can link as far east as Montana and south as Salem, OR. Many repeaters have phone patches which you may access by becoming a member. But if your primary desire is to have a phone, I suggest getting a cellular. Most phone patches are busy and the repeaters are filled with hams talking about ham radio. I use the phone patches for talking to home but you may not phone businesses on the phone patches, so they have limited usefulness if you merely want a phone.

I have two Eimac 8295A/172 "bottles" and matching Eimac sockets for sale.
These are ceramic type devices like that of the 4CX___ family, but much
bigger. These are forced air cooled, pentodes, 1KW diss. (ea), 30 MHz,
6.0V @ 8A fil,

Physically they are approximately 4" high and 4" in dia.
Each tube has the matching Eimac turned radiator aluminum plate cap.

These are low hour used (under 50), not discolored, not abused!

Anyone out there interested in building that dream PA...now is the time

Well Carl, I'm glad you had a good experience with Ramsey. Having built several Heathkits in my day, and two Ramsey kits, I'd say there is a big difference between what *was* at Heath and what *is* at Ramsey. Granted, Heath wasn't perfect, but I had 'high manufacturing yield' with Heaths, and received good post-sales service. The designs were mostly pretty reasonable and reliable. The two Ramsey kits I built were supplied with bottom-of-the-line components, and both had missing parts that I had to scrounge from the local parts emporiums. (It wasn't worth the hassle and the stamps to nag Ramsey). The designs (for the kits I built) are marginal, and though I got them to work, I suspect less experience builders might run a high risk of being disappointed. Kit designers face a big challenge in the area of manufacturing yield, since they have zero control over the 'factory'. Heath took pains to address the issue. Ramsey, in my limited experience of two inexpensive kits, does not.

Don't get me wrong, I don't mean this to be a 'trash Ramsey' post. They were low cost kits, and I did enjoy building them. But I would not have been a happy camper (or solderer) if I had paid any more for what I got.

73, Dave NG0X

P.S. Regarding English translations: ooooooohhh what a hot button of mine you just hit! It pi**es me off to no end to spend $1800 for a new radio and see things like "moduration input" and the like in dozens of places in the manual. There is absolutely NO EXCUSE (rude shouting intended) for that stuff from a multi-national manufacturer. I'd love to build up enough frequent flyer miles that I could go over to Japan and personally slap someone silly over the stupid errors in their documentation. Unfortunatly, that would probably also be considered rude. :-)

What we offer on the Internet is "A FREE HAM NEWSLETTER" and nothing
more. The purpose of the newsletter is to inform the interested
Amateur Radio public that our product will provide them with useful
information about the hobby of Amateur Radio. The decision for
another individual on the Internet to receive a NEWSLETTER is the
readers decision, not yours. My post gives the reader the choice
if they wish to continue by requesting our newsletter. In the case
of yourself, you did not need to respond.

The ease of posting Usenet News articles causes many inappropriate
articles to be sent to the network.
An article can be inappropriate if it:

-- Is devoid of useful information or ideas.
-- Is sent to inappropriate newsgroup(s).
-- Is really intended for a particular individual,
rather than the entire Usenet community.
-- Contains rude or insulting remarks.

Articles should be composed thoughtfully. Consider sending an
electronic mail message rather than posting an article, if
appropriate. Be aware of the fact that many sites must pay long-
distance telephone charges to receive your article. Also be aware

of the fact that some of the popular newsgroups have tens of thousands of readers. 10,000 people each reading your article for 20 seconds spend a total of 55 hours reading your article. At the end of most articles there is usually a small blurb called a signature or sig. This usually comes from a file in the person's login directory and is appended automatically to the message by the news reader. Some people get carried away with their signature and place complex ASCII drawings or cute sayings at the bottom of their messages. These signatures bother most people and it is considered poor "netiquette" to ave signatures larger than about 4 lines. Please remember to save your signature file as plain ASCII text, since vendor dependent binary files (such as Microsoft Word files) are not portable across the entire Internet community.

Many new users wish to test their ability to post before they actually say anything of any interest to anyone. Don't post test type messages to an active newsgroup. This will interrupt quite a number of people and is considered poor "netiquette". There are usually a number of "Test" newsgroups (they usually have the word "TEST" in their name) that can be used to verify that posting from your host will be successful. Some test newsgroups (like ALT.TEST) have automatic E-Mail responding software. A post to those groups will cause electronic mail from all over the world to be sent back to you as your post gets forwarded from site to site.

The "Newsgroups:" line in a news header isn't limited to just one group. If a note makes sense to more than one area you can cross-post it to other newsgroups by just separating the newsgroups with a comma on the Newsgroups line. It is considered poor "netiquette" to cross-post to more than several newsgroups.

When posting new articles to News, please remember that News runs on many different hosts and operating systems. The majority of posts from the Usenet are viewed by people running non-DOS/Windows operating systems. Inserting graphics or non ASCII text (such as different fonts, underlining, color changes etc.) in an article will appear as unintelligible garbage to almost everyone else. When responding to articles, use the Follow-up Article option instead of the New Post option. This will maintain a reference link between your message and the article you were reading at the time of your posting. People reading your message from other "thread based" news readers, will be able to understand how your message fits into the rest of the conversation. Intersperse your comments between the quoted text and delete any large quoted sections that do not pertain to your response. Someone can always find the original text by clicking on the unique Message ID. Also, use Message ID's when referring to other articles and never refer to another article by it's article number. Article Numbers are never the same from system to system so only people reading news on your own local system will know to which article you are referring.

Try to keep your text in a generic format. Many (if not most) of the people reading Usenet do so from 80 column terminals or from work-stations with 80 column terminal windows. Try to keep your lines of text to less than 80 characters for optimal readability. If people quote part of your article in a follow-up, each line gets indented a few characters and gets proceeded with a ">". Thus, standard lines of 75 characters or less are best for later readability. Be careful when using proportional style fonts since they allow you to place more characters per line than fixed style fonts.

Last but not least BOB, your suggestion that persons should be asked to CRASH MAILERS WITH ELECTRONIC FECAL MATTER will be met with a strong challenge here at EPIX.NET!
Should such an occourence happen we will refer the matter directly to your commander, you are under the Uniform Code of Military Justice!
Furthermore any damages caused by your suggestion will be dealt with in a court of Civil Law.

I reply:
I have the Kenwood 690/SAT and have considered the new ICOM 736, but after playing with the ICOM at the
local ham radio store, I'm going to stick with the Kenwood 690.

Kenwood Pros:

1) You can select various IF filters for both the 8.82 IF stage and the 455 kHz IF stage independent of mode.
This feature gives you a much better filter complement to conquer any situation that you may run across.
Also, you can use any filter in any mode. I use the 6 kHz filter in SSB mode for general coverage
shortwave listening. I get very good fade-resistant fidelity for listening to the BBC.

2) The radio works on 12 Volts. The ICOM 736 requires 28 volts because of the requirements of its
finals. In an emergency, you can hook the Kenwood up to your car battery. You can't do this with
the ICOM.

3) The IF shift on the Kenwood is equivelent or better than the passband tuning on the ICOM.

ICOM Pros:

1) 100 watts on 6 meters.

2) The optional tone board UT-30 allows you to set the PL-tone for repeater use from the front
panel. The Kenwood requires you to flip DIP switches under the bottom cover of the radio in order to change the PL-Tone. The Kenwood's PL board is an option too by the way.

3) Antenna tuner works on 160 and 6 meters. The Kenwood's I believe doesn't work on 160 and I'm sure
it doesn't work on 6.

I decided to stay with the Kenwood because audio quality is of the essence to me. The Kenwood has the
best receiver audio in the business. Also, I can customize the radio with the filter complement that
I want for each IF stage. I wish ICOM and Yaesu had this flexibility, but only Kenwood offers this.

>knight@cae.cig.mot.com
I have had the 2sra now for about 2 years and I do like it. The scanner
part is full coverage but is VERY subject to intermod in high RF areas.
Still its nice to have the capability. The lil scanner antenna is almost
worthless on the lower frequencies so I made an adapter from a panel
mount BNC connecter and the proper other connector (not sure what its called
) and now I can use the rubber duck on the scanner side. Of course this makes
the intermod even worse but in fringe areas it really helps. The 2 mtr. side
is definitly better. It will tune up past 160 mhz and does not suffer from
the same problems the scanner side has. It produces a good clean 2 mtr signal
Have had absolutly no problems with it. I have never run it at full power
but even with it running at 1.5 watts the back of the case does get warm.
This thing has more buttons and features on it then I have ever figured out
how to use but if you really try, they should all be easy to learn. I would
buy another...

I used a 757GX while operating /J3 in Grenada last summer. I ran it for a
week on CW and RTTY and it performed very well. The receiver is fairly
quiet and I found no "bugs" in the rig. If the price is good, go for it.

> want to look into a half-wave antenna, since they don't need a
> ground plane

My Saturn is only mostly plastic. The hood, roof, and trunk lid are
good ol' U.S. steel.

I've got a Larson NMO mounted right in the center of the trunk lid,
with excellent signal and durability so far. The trunk has some
support ribs that also make excellent cable-trays, so the whole wire
is hidden right to the exit hole. From there it goes down behind the
trunk arm and into the trunk proper.

Also, be careful about through-glass antennas, as most Saturns have
some kind of metalic coating in the dotted window trim. I've heard
that this messes up the coupling for glass-mounts.

Happy Hacking!

* Remove Antenna and Battery

* Remove (6) black screws in rear plastic cover plate
(where the battery would normally fit)

* Remove the (1) small black screw in the battery slide switch
(see figure 1 below for screw locations)

* Loosen (but don't remove) the (4) black screws on the upper
back of rear case and slightly separate the rear radio
case.

* Remove the "L" type plastic cover

CAUTION: Watch out for the delicate ribbon cable

* Locate and unsolder jumper pad #6 (see Figure 2 below
for jumper locations) (Pads 1,7 should now be jumpered)
(Stock, Pads 1,6,7 only)

* Reinstall the "L" type plastic cover

* Tighten the (4) case screws on rear case

* Re-install the (6) black screws in rear plastic cover
plate.

* Re-install the (1) small black screw with the battery
slide switch

* Now attach the antenna and battery

* Turn off Radio... Press and hold both UP & Down Arrows
Keys (right side) while turning on the Radio

* Modification now complete!

(Figure 1 not rendered; my ASCII art skills aren't that good)

Figure 2: Jumper locations. For European tone burst, add solder
to jumper 4.

What is the difference between night and day ?
You can use an HT as a weak mobile substitute, but don't expect a lot of coverage with an
HT in a car. Use an outside antenna, sure it helps, but
the power difference is quite different. 3-4 watts vs 25-40, your looking
at a 10 db difference. You'll hear the repeater, they may not hear you.
Buy an amp, your power goes up, so does the expence. Now your HT has
an amp hanging on the back, a speaker mike, RF cables hanging from the
back.
HTs are practical in there own way, but a good mobile, they ain't.

I have found that charging in just the opposite order works better for me (heating issues on life span aside). I find that the rapid charge (using neg delta-V for rapid charge cutoff) leaves my ni-cd's at something less than 100%. My guess (never measured the discharge ability to be sure) is that it takes them to about 90-95%. If I leave them in the charger to trickle for an additional hour or two, I get more time out of them. Incidently, this is the same thing I saw in Motorola's notes about their ni-cd cell phone battery rapid charger, it said to leave them in for a while after the rapid charge LED went back to trickle.

As for battery life, when I only owned the 15 hour plug in charger that came with my HT, it got about 150 cycles out of the battery (once a week for about 3 years). Since I've bought the rapid charger, I've had the same battery for about 3 years now, and it's still working fine. (Yes, it may die tomorrow, but I at least didnt' see a dramatic decrease in life by rapid charging). To the contrary, at least now I never forget about a battery, and leave it on slow charge for an entire weekend, since the rapid charger cuts out on it's own. This may be worth more than any damage I do by rapid charging. I also don't fully drain it and risk reverse charging the cells, since I can partially charge it some times, and the charge circuit cuts out at full charge.

From: gwb@rohan.sdsu.edu (Greg Bailey @ SDSU)
Subject: Gonset 2M Power Amp

I am looking for information on the "last" Gonset 2 Meter power amplifier
that was built. The amp used 4X150 or 4X250 and had an output of 150 or
250 watts.

I remember it was physically little larger than the old 826 tube amp that
Gonset sold. The amp didn't have a window to view the finals like the
826 device had.

Any old timers out there have the model number to this amp, or perhaps
one covered with two inches of dust and still kicking about in the corner of
the shack.

Thanks, Greg

I have a 741 also. As far as I know, there isn't a mike gain control
on the rig. There _is_ a deviation control inside the rig, but
that may not need adjusting. I suggest talking across the mike rather
than straight into it. This is what I have to do with mine. I
hold it an inch or two away from my mouth at a right angle. There is
less 'breath noise' doing it this way too.

Hope this helps.

Subject: SPECIAL EVENTS STATION!!

Hello Everyone,

The W8YY Winter Carnival Special Event Station is being set up for this year. As of now we are planning to operate W8YY for 24 hours straight from Thursday Feb. 2nd until Friday Feb. 3rd. The times will be from 6am Thursday to 6am Friday. The following frequencies will be used: >From 6am to 6pm Thursday, 14.255 Mhz. From 6pm to 11pm Thursday, 7.255 Mhz. From 11pm to 4am Friday, 3.805 Mhz, and the last 2 hour will be held on 7.255 Mhz again. We will also be monitoring 146.58 Mhz during the operation period. Anyone wishing to contact us via Packet can log in on 144.09 Mhz to the MTUBBS. Certificates will be awarded to all stations contacting W8YY during this period. Please send a large self addressed stamped envelope, certificate sized if you don't want any creases. The certificate is 8.5 x 11 inches.

Subject: TH-79 / 800 MHz

So far, I have only heard rumours about the 800MHz coverage on the TH-&79 European model. Are there any Europeans out there that can confirm this? I have the A model, although located in Europe. I cannot find anything on the schematics that would suggest 800 MHz capabilities. Nor can I find room for anything extra inside the unit. Also - 800MHz coverage would have no practical use here, as far as I know.

I'd have to agree, Carl.

I've purchased several of their kits, and have on the balance had few
troubles. While some of them aren't nearly as glamorous as they sound in
their catalog (the FM receiver and SCA adapter kits, for example, are best
skipped in favor of the better-performing FM Atlas/Bruce Elving options), they

do work provided the instructions are followed carefully.

I've not played with any of their amateur radio kits, but the ones I have purchased and assembled were entertaining and functional.

From: claude.suddreth@bgbbs.com (Claude Suddreth)
Subject: THX vs AC-3/5.1

I recently began redoing my home A/V setup after about 5 years of use
and have come upon some terms and technologies that are completely new
to me which I hope somebody out there can explain. If these questions
are old news to others I apologize, I just found this group yesterday.

Can anyone out there explain to me the differences and relationships
between THX/AC-3/5.1?

I realize that THX is a standard set by Lucas Films for theater sound,
and for home sound requires that the 3 front speaker be identical, 1
or 2 subs, and 2 rear surrounds.

I have no knowledge of AC-3/5.1 except that I am under the impression
that it is the same as or related to Dolby Surround Digital. Is this
correct? Does AC-3/5.1 have this same requirement for speakers as THX,
and if not what does it need? I currently have a Dolby Pro Logic setup
running through Cerwin Vega's all around and have no desire to purchase
a completely new speaker set. Are these compatible with AC-3/5.1?

Also, is AC-3/5.1 strictly a digital format meaning will it be offered
on laser disks and such but NOT on VCR's? What about cable (HBO,
Cinemax, etc.) broadcasts?

Lastly, which receivers on the market or about to be introduced are
designed such that either THX/AC-3/5.1 is built in or alternately can
be added via a signal processor at a later date?

Thank you all very much for your help.

>Their ads claim that it can control both the volume and frequency
>selection on the 51r. Anyone have any experience with these
>features?

>The LCD mike seems to have only one set of up and down buttons. Does
>that mean that there's another button to push to toggle between
>volume and frequency selection?

I don't know much about the 51r, but if the volume is a toggle button on the
control....with the up/down as the controls....its probably just a matter of
assigning the volume button to the USER defined button on the mike. The
default is band switching on the FT530....you just hold the button down when
you turn the radio on, and you can set it to any other button on the unit.
I once set it to DTMF 9....not because I needed the 9, but F/M-9 is the swap
function...and the light button on the mike also does 'F/M'.

Funny, I can't remember what the other three buttons on the mike are.....I should tear the house apart looking for it again....last time I found the mike for a handheld that I had long sold off....8-)

Subject: YAMAHA RXV-1070

I recently became very interested in the Yamaha RXV-1070 receiver. Does anybody out there have one of these, and if so what are your impressions about this unit? It has several DSP modes concerning I believe 35mm, 70mm, and TV cinema. Are these modes as realistic as the magazine adds suggest? I talked to a Yamaha phone support rep yesterday and he stated that around June or so a RXV-2090 model would be introduced which featured among other things 4 surround channels (2 front/side, 2 rear), output of 110x3 and 35x4, and a "connector" for use with a Yamaha AC-3 signal processor to be released around September. Does anyone have any additional knowledge of this unit or it's surround processor? Oh, and the retail price for the RXV-2090 was supposed to be around $1,495.00. Should I wait for this unit or buy the RXV-1070? Can anyone offer a better / alternate suggestion that I should consider?

Thank you all very much for your help.

Dear net,

For starters: this is not to start a holy war.
Someone I know is going to Japan next week and I am
interested in obtaining one of the above HTs.

I have some questions:

1. How do the TH-79 and FT-51R compare?

2. What is the difference between TH-79A and TH-79E
(OK, I already know where the A and E stand for.)

3. Excuse my ignorance, I remember reading about the
TH-79D (at the time I did not know my acquaintance
was going to Japan).
What is the difference between the D and the previous A/E?

>>for something that would go on a dog/cat collar and run for at least a day
>>or two. Any information would be greatly appreciated. THANKS!

While I was at WSU, I examined for a few weeks a radio collar that the U of I
(Moscow, ID) people were using at the time for tracking cougars in Idaho.
That might be someplace to start. The guy I borrowed it from was the
licensee of the WSU amateur radio club, but can't remember his call.
The club's call is w7yh, and I have a URL for their club if you want it.

I also know about a LARGE project in Oregon in the Starky area, where they are
automatically tracking elk movements by computer.

Good Luck,
Curt, WE7U.

I have an old Heath HA-201 2 meter power amp. It was made in the 1970's, and is rated at 10 watts out with 1 to 3 watts input. It uses a couple of 1/4 wave lines and 1N4149 diodes for very fast T/R switching. Many years ago I used it for mobile use with an HT and found it worked satisfactorily, but somehow it got stowed away in my attic and hasn't been used for quite a while.

The diode switching circuit bothers me, there are diodes in the output path that carry the full output power between the final tuned circuit and the antenna. I wonder if this unit is going to generate harmonics that would be unacceptable by today's standards, and if I should try to build some kind of filter to put between the output and the antenna before I use it again. Has anyone ever looked at the output of one of these things with a spectrum analyzer?

Just for your information, Kenwood states that the audio deviation adjustment for the 741 and 742 triband radios is located within the band modules. This means each band is separately adjusted. Being a 742 owner, I can tell you that this can be a pain to adjust each band, especially if three bands are installed. This is due to the disassembly and juggling of the band units. Keep in mind that only the center band unit feeds power to the control portion of the radio.

You can call the Kenwood help line in California and they will tell you which pot to turn to acheive this adjustment. Good luck...

I would like to find a microphone with a DTMF generator
inside it so I can add DTMF capability. It will also have
a battery to power the DTMF generator inside the mic.

I would like to find someone who has one, sells one or
manufactures this item.

I am looking for two different kinds of microphone, one for
a walkie talkie and the other for base station.

Any help is appreciated.

Thank You, All the Best

MICHAEL>>...can't find a DTMF microphone for a walkie talkie.

It's not that simple. Most HTs will not accept that input through the mike jack. Even those with DTMF pads built in to them.

What unit do you have? Does ther manufacturer tell you that it's possible?

>Before you buy any MFJ product, get good references on it first.
>You get what you pay for.

>john K3NXU

OK, Gregory, here's a reference for what it's worth: I have a
MFJ-941D antenna tuner which I have been using since the mid-1980s.
As John implied, it is a "bargain basement" piece of equipment, but
when I bought it I was more interested in functionality than frills.
I have used it with a set of Drake "twins" (T-4XB/R-4B) and with my
current Icom IC-735, and with W9INN compact dipoles, 70 to 135-foot
random wires, regular "cut-for-band-of-interest" dipoles and my current
G5RV dipole.

Bottom line, it works. Never had any problems with it, and won't
replace it until I do (or go to higher power; it only handles 300 W max).
I work a reasonable amount of DX on 40, 30, 20 and 15 meters, so I'm
satisfied. The IC-735 seems to like it.

Now, I'm not familiar with the unit you mentioned, but remember that
MFJ is bargain-priced; however, I've never known them to claim something
that wasn't true in their advertising or spec sheets. Yes, you get what
you pay for, but sometimes "better is the enemy of good enough" when you
are on a limited budget. If you run low power (50-100 watts) as I do and
are satisfied with what will "do the job" rather than impresing others
with a multi-kilobuck station (which no one will remember or care about
after you're gone), then see what MFJ has available. I recommend going to
a good ham store and talking to the sales people (all hams, usually), or
call some place like AES or Texas Towers and ask their opinions.

One caustion: If you buy low-cost, you may have to be more knowledgeable
about what you're using and its limitations to avoid problems, but then
that in itself can be a good thing.

>and other ideas as to ways to improve the unit. Thanks for the information.

>Lee Buller, K0WA
>lee.buller@otherbbs.com

I would highly recommend reading the follow-up to Measures' arcticles.
It appeared in the Tech correspondence column of the QST, a month or two
after the last article by Measures. It was in the fall '94 issues of
QST.

To paraphrase the correspondence in one line: Measures' measures range
in quality from suspect to just plain wrong and dangerous.

Example (suspect): Measures recommends use of nichrome wire of a certain kind
for constructing the parasitic suppressor attached to the plate of the
tube. His idea is that the distributed resistance of the wire will
lower the VHF Q. However, this misses out on the fact that the reason
the suppressor works is because it presents a very high impedance path
to VHF, higher than the resistor and this provides a low Q. So there
is not much VHF current in the coil. In his favor, the nichrome will
reduce the possibility of the *self resonance* of coil in UHF/microwave
region. In my limited experience, given the way most hf amps are constructed,
with wire here and wire there, this seems to be a remote possibility.
This idea seems suspect.

Example: (dangerous). Modifying the antenna change over relay circuit
to be fed from 110v voltage source with a current limiting resistor. This
increases the instantaneous current through the relay coil (although the
resistor will limit the rate of rise) and speed up the change-over. The
danger of this idea is that it presents a open circuit voltage of 110 v
at the relay jack at the back of the amp.

I am writing this from memory and may not have gotten the details exactly
right.

Please proceed with caution.

Message-ID: <kgk-2501951812330001@aragorn190.acns.nwu.edu>
Source record: 220945

Hi all

I've check in the oakland ftp site, but they did not have any mods listed for the Standard C168A HT.

If anyone has any mods for this radio, please e-mail a copy to me. I'm getting these for a friend, he would like the out of band tx/rx for Mars/CAP frequencies, but if their are others they would be appreciated also. We are both CAP members and Standard will not release the mod without a copy of the ROP license which will not arrive for a couple of months. It would be nice to get the radio modified before hand so it can be certified for use on these frequencies.

Thanks in advance and 73

So I recently picked up a used AR1000XLT that i found in the paper. After some stomping of feet, pulling of hair, and cursing the human factors group at AOR, i think i am finally getting the hang of the, so called "User Interface". Being a Hardware guy i couldn't resist the opportunity to take it apart and have a look. Not to many surprises really, except one, the scanner is controlled by a 4 bit processor which has a serial port. It's a uPD75308GF made by NEC with an 8kB external ROM. So i am wondering if anyone has been successful at interfaceing to it. It sure wound be allot simpler to program those 1000 channels using my computer. Any takers?
I would also appreciate any "scanner tricks" advice from you AR1000 experts out there, like how to scan arbitrary banks, unlock a bank with out unlocking all locked channels first, jump through hoops.

I find your (AMSOFT) reply as innappropriate, perhaps more innappropriate, than Bob's comments, and a substantial waste of "bandwidth".

Perhaps what Bob should have said is that it is contrary to Internet's policy for Internet to be used as a vehicle for commercial advertisement. That is a fact. While I can not say that the policy is a legally binding one (that is for others to say), it certainly is followed by the vast majority of commercial enterprises, and for good reason. They realize that they run the risk of alienating potential customers who may not appreciate such a blatant disregard for net etiquette and policy. Like Bob. And like me. Mind you, it is no big deal to me personally. But I don't like advertising here either, and there are plenty of alternatives to AMSOFT.

You seem to be aware of some internet policy judging from your long quoted (though not attributed) "lesson" to Bob. Perhaps you would find a more complete review of policy personally enlightening as well as commercially "prudent".

: Probably will have to go dual-band on this one.
: be a repeater. Repeater operation from 145.5-146.0 is illegal
: (97.205 (b)) and yes, the FCC does actual go after people that

Another thing to keep in mind, 145.800 - 146.000 is reserved for satellite
operation. You'll get jumped on quickly for that one.

Also, if the separation between your transmit and receive frequency is only
400 Khz apart, you're tramsmitter will totally desence your receiver.
Even your best duplexers are good for 600 Khz and thats gonna fill your
trunk and cost around a grand.

Good luck ! John k3nxu

From: lbutler@umcc.umcc.umich.edu
Message-ID: <3g7fhq$koo@umcc.umcc.umich.edu>
Source record: 220859

Being a new ham, I'm trying to make the right H.T. purchase. I like the TH-79A and the FT-51. I go back and forth on which one to order.

I know the new Kenwood is now out and about $80 more than the old and the difference is a new rubber duckie and channel lockout. I love the looks and feel of the radio too.

I also know the Yaesu is about $10 more with the 5 watt battery. The problem here is the Car cord is $67 versus $21 for the Kenwood. I've been told the Yaesu is not laid out as well for operation too.

What do you people think? Has any of you used both or even own both? I received my license last week and can't wait for tax time so I can purchase one of these and explore the realm of Amateur Radio. I just want to make an informed purchase. Help....

Thanks, Les

I have a brand new, still in box scanner for sale. The Uniden Bearcat 800XLT base station was the last model manufactured that receive the 800 mhz band (Cellular PhoneS), before the FCC restrictions were in place.

The Bearcat 800XLT features:
* 40 channels
* 12-Band Coverage
* Crystalless
* Direct Channel Access
* Channel Lockout
* Simple Programming
* Manual Step-search
* AC/DC
* Steel Cabinet
* Two Antennas

This device is still in the box, and was used only once.

Paid $225 -- Sell $125 inc. postage

Interested parties should send an e-mail message to:

gblhotel@ix.netcom.com

Please include your phone number and the best time to call.

687. Icom IC-2700H Mods

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-26 08:10:07 UTC
From: CJSRFM@vm.ucs.ualberta.ca
Message-ID: <173321073S86.CJSRFM@vm.ucs.ualberta.ca>
Source record: 220861

Hi there! From Icom USA comes this mod sheet for the 2700H:

RX Expansion Modification
==========
1. Remove Top Cover. (6 Screws)
2. Remove Bottom Cover. (6 Screws)
3. Remove Front Display. (4 Screws)
4. Locate the Logic Board.
5. Remove W1 from the logic.
6. Hold [SET], [SPCH] and turn radio on.

Expanded Frequency Range

AM Mode 118-136 MHz
FM Mode 138-174 MHz
350-470 MHz

Tx Expansion Modification
==========
1. Remove D16 and D17
2. Hold [FUNC], [A], [CLR] and turn the radio on.

FM Mode 138-174 MHz
350-470 MHz

That's what Icom's sheet said. I didn't follow it when I modified my
radio and it worked very well. Here's what I did:

1. Remove power and antenna from the rig.
2. Remove the face plate from the rig (careful with the small hookup cable
that attaches to the logic board).
3. Locate the "Zero-Ohm Resistor" W1 and cut it out with a fine-tipped set
of wire cutters. W1 is clearly marked on the board and is along the top
edge, just to the right of center of the logic board. In my rig, W1
looked like a 1/8 Watt resistor, solid white in colour.
4. Using the same pair of fine-tipped cutters, remove D16 and D17. They're
the first two diodes slightly below W1, going towards the LEFT side of
the rig.
5. Carefully re-attach the face plate, mic, antenna and power.
6. Press SET and SPCH together and power on the rig. Keep the buttons
depressed for about 4-5 seconds as the radio goes through a reset.
ALL MEMORY INFORMATION IS LOST!!!.
7. Re-program in your memories and there you have it!

Futile Attempt at a diagram:

Front View with face plate detached.

Where D = Surface Mount Diode Package
W = Jumper W1
6 = Diode D16
7 = Diode D17
HEAD = Face Plate Connector
MIC = Mic Connector

I hope that the diagram and description are clear enough to follow.

For X-Band repeating, the only information that Icom game me was a brochure entitled "With Icom Radios, Crossband Repeating Has Never Been Easier!" In short, the only way I've been able to find to get the 2700 to x-band repeat is to put it into remote mode and use the appropriate DTMF code to turn it on. It works fine in this mode. I've done extensive testing and all these functions appear to work fine:

DTMF CODE FUNCTION
========= ========
B, XXX, # Remote function ON (XXX = 3 digit password)
B* Remote Function OFF
DB* Cross Band Repeat ON
DB, XXX, # Cross Band Repeat OFF (XXX = 3 digit password)
1 Call
2 Memory
3 VFO
6 High Power
9 Low Power
DC Speech
D (+NNN) Enter (Direct entry of mem. chan. or VFO Frequency)
Up
* Down
A Clear

That's all the information I've got to date. So far, I haven't been able to find a method of putting the rig into X-Band repeat without using the remote control function. It'd be nice to be able to do that from the rig or mic.

Hope this information helps!

I just acquired a TS-950SD with the SM-230 monitor. I have debate as to whether to keep or sell the scope.

I don't do much HF phone or digital modes, although that could change. Mostly, CW, contesting. Monitoring rx and tuning the amp seem the most likely functions.

Have you used one of these? What's your viewpoint? There are these couple of guys who want to buy it and I'm looking for reasons to keep it or not.

Thanks.....Bob

>
>Does anyone know if there is a mod to enable 800 mgz on the th-79a
>any help would be appreciated. Thanks

Hi Bill
The A-Version of TH79 is not modifyable for 800 MHz except you are able
to solder about 60 missing part of a complete separate receiver section
into your handheld. By the way .. all in miniature smd-technic.!
The european version is fully equipped, means no missing parts and modi-
fication is simply done by cutting a green wire in the ctcss cabinet.

> : problem before.

Ok, the problem with entering 146.760 and getting 146.7625 is that the
channel step size. To correct it Press F for 1 second, then 3. You'll be
able to rotate the tuning control until your desired step size appears.
Then, press any key but power, lamp, and moni. You should be able to enter
your repeater frequency now (I set mine at 5) on VHF and 20 on UHF.
When you did your memory reset, it lost this parameter and went to its
default.

Hope this helps,

Aditya:
The metal thing on the mic is a mic hanger. Many radios from Japan
do not have a 'button' on the back that allows you to slip the mic into
a bracket. They usually supply you with some sort of glue on hanger with
a hook on it. The hole on the metal thing slips onto the hook. You should
not get a shock from touching it because it probably is not connected
to anything (worse case: ground). Maybe static electricity from car seat
<G>.

[Article crossposted from rec.radio.shortwave]
[Author was Az0th]
[Posted on Thu, 26 Jan 1995 15:54:15 GMT]

I'm in need of a manual/copy for the old Allied/Radio-Shack SX-190 receiver. I'd be happy to pay copy/shipping or can swap for copy of Drake (R-4B/C, SPR-4, SW-4A, T-4XB/C), Hallicrafters (SX-115) or JRC (NRD-515/525, NSD/NCM-515, NDH-518) manual.

If you happen to have an SX-190, or it's hambands brother AX-190, could you answer a simple question about it (my curiosity is killing me!): does it premix the HFO and VFO signals before downconverting to the 455 kHz IF, or use the xtal-based HFO to convert to a first, bandpass IF (~2.8-~3.2 MHz) and then mix with the VFO to get the second, 455 kHz IF? Or something completely different? And why are the HFO and VFO signals both brought out to the back panel: was there a digital readout made for it, or a reciter?

This is a very attractive, outrageously sensitive little receiver, that looks like a natural for QRP and Field Day, with 80/40/20 ham coverage + SWBC to relax with. Has anybody got the book? TIA!

Cheers es 73
RF Buchanan

699. HELP!, Please w/Tuning Dual-Band Antenna

I'm having trouble getting the SWR down on a Comet B20-NMO, dual band,
mobile antenna.

*
| < ='s adjusting point As depicted by my crude sketch,
| the bottom section is adjustable
#< in the base. The center loading
#< enclosed coil coil can be adjusted up/down on
| the bottom section and the tip
| is adjustable.
^<
When I get it tuned on VHF the SWR's high on UHF
and vice versa. What I am looking for is some direction
===== on the order of adjustments to perform and the sequence
of frequency bands to tune.

I'm having a similar problem with a Comet B10-NMO which is as above
minus the center, enclosed coil. It is a short antenna with a
spring/coil whip adjustable only in the base. I've thought about
stretching or compressing the coil but would appreciate some comments
from experience.

Please let me know if you've solved a similar problem with
replies to:

Dick Harper
dharper@kumc.wpo.ukans.edu

From: affrunti@orion.oac.uci.edu
Message-ID: <affrunti.791138710@orion.oac.uci.edu>
Source record: 220876

W&W makes a car cord for the FT51 for about $30. I own an FT51 and love it. Keypad buttons are larger than the TH79 and are also backlit when you press the lamp button.

Personally, I don't have any problems programming the FT51, seems very intuitive to me. However, I have never used any Kenwood HT, so I cannot offer a comparison.

I do own a Kenwood TM733 for car mobile, and have had occasion to interact with Kenwood customer service. The people I dealt with were friendly and courteous, but unresponsive to my particular problem. Maybe it's because Ham radio is something like 2% of Kenwood's business? I have been told that Ham radio is over 80% of Yaesu's business, so maybe their priorities are different?

As I said, I love the FT51 and would buy another.

> lithiums, I'd appreciate it. I know they are expensive, but they are also
> the only thing that may operate in severe cold. Thanks.

Tadiran Electronic Industries was showing in ECN magazine some AA
recharageable lithium battery's, Model TLR-7103. Perhaps they would be a
good place to check out.

Tadiran Electronic Industries, Inc.
2 Seaview Blvd.
Port Washington, NY 11050 (516) 621-4980

or another possible source:

Plainview Batteries
23 Newtown Road
Plainview, NY 11803 (800) NICAD-LI (in NY (516) 249-2873)

I've ordered from Plainview before (no experience with Tadiran), they have
a 9.6v 110 mAh (120 mAh typ) nic cad 9v battery and also show a 9.6v 120
mAh
(150 mAH typ) Nickel Metal Hydride 9v battery which looks interesting.
Also AA 1200 mAh Nickel Metal Hydride cells, but possibilly may be several
weeks before the AA's are available.

702. IC-2330A still available?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-26 19:27:26 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanD3121q.D9u@netcom.com>
Source record: 220883

This summer, I picked up a flyer on the Icom IC-2330A 144/220 mHz dual-bander. Looking at the latest HRO catalog, I don't find it listed. Has Icom discontinued this model?

The other 144/220 that caught my attention was the Kenwood TM-642A, especially since there are add-on modules for all the other FM bands. Anyone have an opinion on this rig?

From: jlowman@netcom.com
Message-ID: <jlowmanD3125H.DG3@netcom.com>
Source record: 220884

Is there any commercial gear available for the 902-928 mHz band, or is it all homebrew/converted? There are a few repeaters listed for the LA area in the _Repeater Directory_ but I don't hear any activity on my scanner.

TIA,

Jim

Your right the bernstein book is a real bonus.
Someone sent me a pointer to "The Guide To The AR1000"
from the Electronics Equipment Bank in Vienna VA.
Can anyone give me a comparison? Also How about posting
a reference to that newsletter, name, date, issue, etc.
Or forward my name and E-Mail on to m. alexander, if you can.

Yeah, it interferes with the capacitive coupling between the antenna foot and the box that terminates the coax. Defroster wires supposedly do the same thing. I wonder what a car would be like if it was designed for hams by hams....all body panels grounded, ignition supressed, +12VDC bus bar right from the battery terminal located right beneath the dash, easy to route coax, etc....Well, I can dream, can't I? :)

I'll have to dissent also. The current set-up works well except for a few newbies and rebels. If there was really a problem I think we would see traffic in the equipment group far exceed traffic in the swap group. This is not the case as far as I can tell. Things are just peachy the way they are.

W5>73 Robert WB5CRG w5robert@blkbox.com

How many times do I have to read messages from hams that send a "Thank You" addressed to ALL. When one seeks help and someone takes the time to respond, the least the receiver of help can do is send a simple individual reply for thanks. After all-the respondents to this call for help responded one by one. I have received up to 75 messages in a call for help and sent individual thanks to each. It was very time consuming, but it was the right thing to do.

Would you at your wedding, if you were the groom, get up at the end of the reception and yell out, "Gee, Thanks everyone for the gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to respond to someone who H E L P E D you.

>N5HYH
>
Usually a marine band radio will not go to the Amateur radio band like
most Amateur transceivers that can operate within the marine band. This
may be bad news to some, BUT be very glad this is the case. A very common
thing is to open the marine VHF radio's to the so named
" Private Channels ", a block of frequencies set aside for future
expansion of the VHF marine service. The has evolved to a simular
effect like the 27 MHz CB band did. So with a crowded marine radio band
also offering the 2 meter amateur band and great repeater coverage over
the water, 2 meters would be a wasteland. If you do not believe me, just
grab that scanner and give a listen to the " Private Channels " the next
nice boating day. A company these days has a hard time selling a Marine
VHF radio without the capability of the " Private Channels ".

Most of the Marine Radio's are not licensed either. The FCC does not
scare the typical weekend mariner, he has no idea about the license
requirement and how are they going to be caught anyway they ask.
Also on Western Lake Erie, charter fishing has grown so big, and
quite a few boats are equiped with DF equipment, these " captains " need
a " private frequency " the chat with their click so others will not bring
their charter fishing boat and get in on the good fishing spot too
They would love to get in on the 2 meter band wiht all the quiet
frequencies available.

Hmmm seems to me an Amateur Company has a very hard time of selling a
radio that will not expand to the business radio service also Heck I have
chatted with some fisherman who use the Amateur frequencies, also they
installed scramblers into the Amateur equipment. Others use the 440 MHz
band for personel communications around the country, knew of one who used
a small radio to call his driver, said he would never be caught as only
used the radio for less than 5 minutes a day and did not need an Amateur

license for this.

There is a very blantent disregard for the rules and regulations of radio out there. People just do not care anymore.
Too Bad..

Gary Fiber

I've got to agree with the dissenters. The two groups are not the same,
and because some people are making the mistake of putting "for sale"
items in r.r.a.e. does not seem like a good enough reason to amalgamate
the two groups.

This is an offer for a private newsletter which is an advertisement, right?
An offer to subscribe to advertising is, IMHO, an advertisement in its
own right. The real crux here is the motive behind your postings--it's to
market a product, plain and simple. As far as responding via private e-mail,
well, I hope that my postings will prompt others to complain about what you
are trying to do here. If we let you get started, then we may as well open
the floodgates net-wide. Wouldn't that be a pretty sight--junk e-mail by
the megabyte...

725. Info/manual on TPL VHF FM Amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-28 22:06:14 UTC
From: jwalters@teleport.com
Message-ID: <3gef4m$5rd@kelly.teleport.com>
Source record: 220808

Several years ago I bought a used vhf fm amplifier - about 25 watts out
for 1 watt in -

It is a TPL Communications, Inc. VHF FM RF Power Amplifier
Model PA3-2AB-1

136-175 MHZ -

Anybody have any ideas/manuals/etc. relating to tuning/using it?

I want to install it in my car for 2meter stuff.

Thanks
Jim Walters WB7AAK

>
Rec.radio.swap serves a useful purpose for electronics that are not
amateur radio specific. I specifically pointed to that group in the FAQ
for rec.antiques.radio+phono because there are parts and supplies, as
well as complete radios, which are of interest to non-hams as much as
hams, and has a wider audience of interested readers than any of the
newsgroups that focus on limited aspects of radio technology.

I am opposed to this proposal. Rec.amateur.radio.equipment serves a
very useful purpose for ham-specific discussion that is very different
from the purpose served by rec.radio.swap. My impression, without doing
statistics, is that rec.amateur.radio.equipment has gotten a great many
advertisements of stuff for sale, some by dealers, that has been
cross-posted to .swap .misc, etc., and we have had a few crosspostings
to rec.antiques.radio+phono included as well. When I see such postings
on the antiques group, I E-mail back to the sender and am specific about
why our group is not a place for the stuff advertised, and there are
others in the group who do this as well.

Unfortunately, it appears that with AOL, Prodigy, and Compuserve, in
particular, we are getting a lot more blatantly commercial stuff
crossposted repeatedly, and while aggressive E-mailing can reduce this,
we are, it seems, going to be stuck with a much higher noise level of
this type of activity than was the case 4-5 years ago. Making this
change isn't going to fix the problem.

727. Re: FREE HAM NEWSLETTER!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-28 22:57:52 UTC
From: djmullen@facstaff.wisc.edu
Message-ID: <3gei5g$9os@news.doit.wisc.edu>
Source record: 220810
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amate

I recently posted a reply to the AMSOFT spam telling them that
instead of asking for a copy of their thinly disguised advertisement
for their CD-ROM, I was sending a copy of their message to their
system administrator.

I sent that message to all the newsgroups AMsoft spammed because most
everywhere their original message went, there are people talking about
burying the instigators under a deluge of email. This will clog the
network and may well cause the people doing it to lose their access.

As I said in the message, the thing to do is to send a message
to their system administrator, which I did, with a copy to AMSOFT.
(The ALL CAPS warning not to send me their ad was to prevent them
from sending me more of their junk mail because of that copy.)

I presume that most people already know this, but a cursory review of the
responses to their luncheon meat attack shows that a lot of people don't.

To repeat (and clarify), the proper response to any kind of spamming
and especially to a _commercial_ spam is to send a copy of the
message to the miscreant's system administrator along with a note
describing the problems they're causing. This is almost always
effective, whereas a reply to the newsgroup just wastes bandwidth and
an email attack will just get the sender in trouble.

728. ? IF filters ? Kenwood

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-28 23:44:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.8902.7583.0NFB8FB6@woodybbs.com>
Source record: 220811

AD>My Kenwood TS450S has 2 sets of filters. 8.83 MHz and 455Hz. What's
>the difference between these two sets? I'm confused and the manual
>sucks lemons.

Actually, it has two filters per operating mode (SSB/CW).

The 8.83MHz and the 455(k)Hz filters perform, basically, the some
function... that being to roll off signals outside the desired
bandwidth. Each filter can only provide only so much attenuation to
unwanted signals, so "cascading" the two filters provides improved
signal rejection over either single filter.

AD>For those who are knowledgeable (sp?) about the Kenwoods:
>If there was one Filter to buy which one would I buy. I have a Tech+
>license so I'll be mainly on CW (some on SSB 10m - where I can find
>it.)

If I had to buy just one filter, I think I'd probably opt for the 455kHz
filter. Mainly due to cost. The performance of the 455kHz filter may
be a bit better, too. However this is subject to discussion and
personal taste.

AD>There seems to be a large price differential between CW filters
>for the 8.83MHz and the 450 Hz side.

This is because the manufacturing costs of the 8MHz filters is quite a
bit higher... it's more difficult to get 8MHz crystals which hit (and
hold) an accurate frequency... 455kHz crystals are much easier to cut
and thus less costly.

AD>Furthermore, which is better, 500Hz or 270Hz CW filters.

For a beginner... and for most non-contest operators, I'd certainly
recommend the purchase of a 400Hz or 500Hz wide filter. This bandwidth
gives you very good selectivity, yet provides a decent operating
bandwidth.

270Hz bandwidth filters provide a substantially more narrow bandwidth,
which in turn enhances single-signal reception, BUT they also make it
MUCH easier for beginners to tune right though calling station signals.
The bandwidth is so narrow that it's very easy to miss signals as you
tune up/down the band.

I NEVER recommend very narrow filters to new operators.

Now, on the sibject of which filters to buy. The Kenwood filters are
still all 6-pole filters while those offered by International Radio and
Computer (IRI) are 8-pole filters. The main difference being that the

slopes of the outer bandwidth egdes are steeper (thus more selective) in the 8-pole filters then in the 6-pole filters. This also generally means that the 8-pole filters will have a better ultimate rejection of unwanted signals.

The IRI filters are generally competitively priced with those of Kenwood. However, they may be a bit more difficult to install, depending upon which radio you have... some are merely plun-in, while others may have to be wired into place... in many instances, the wiring is simple, however in a couple instances, the wiring requires a bit of deft soldering technique. If ordering from IRI, ASK them what steps are required to install the filters for YOUR radio.

Although I have no interest in IRI, if I were to order filters for a Kenwood radio (any model, plug-in or soldered) I'd get them from IRI. All Kenwood filters are PLUG-IN!

Most beginning ops will probably not be able to tell the difference between the Kenwood and IRI filters... until they start operating on bands which are rather busy and crowded. Then they will notice that the IRI filters do a better job of allowing them to 'pick off' desired signals which excluding unwanted signals.

FINAL COMMENT - If you are a beginning CW operator, LEARN TO WORK CW USING THE WIDEST BANDWIDTH YOU HAVE AVAILABLE (e.g. SSB FILTERS). The wider the bandwidth, the more signals you will hear, and the harder your brain will have to work to allow you to pick out the desired signal. This allows you to learn how to mentally 'filter' out unwanted QRM/QRN reagrdless of what filters you have at your disposal. It also drastically increases your ability to CONCENTRATE on copying CW, which, after all, is what you want to do in the first place. Without concentration, copying CW by ear is virtually impossible.

I used to be a consulting engineer for Heathkit and Zenith. I design commercial, medical, and amateur RFequipment. I wish I could help you with the meter, but I have none here and the old employees are scattered around.
Check in QST for parts ads in the back. I think RTO electronics got most of
the parts. On the second topic, the AG6K mods, I suggest you read the September 1994 QST on page 71. It is a summary of correspondence from twenty
or thirty RF engineers. The important point is NO ONE in the industry, not Heath, ETO, Henry, Ameritron, Rockwell, Harris, Eimac-Varian, or numerous other sources agreed with Measures on almost any point. There is absolutely
no merit almost all of his suggested changes. Stay away from them. If you have any specific technical questions you can IM me at my AOL address, I will
be glad to help. 73

730. Low Frequency (60kHz) Reception

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-29 00:02:48 UTC
From: Dennis Brunnenmeyer <74464.2341@CompuServe.COM>

Source record: 220813
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.shortwave

I'm very interested in obtaining information on the design and/or purchase of receivers and antenna for 60 - 77 kHz transmissions from stations such as WWVB or DCF-77 (Germany). Leads on manufacturers and/or schematics of modern receivers would be appreciated.

There doesn't seem to be much available in the easily-accessed literature and texts on RF design regarding accepted techniques for developing high-quality LF and VLF receivers. I'm particularly interested in time code (UTC) reception from the afore-mentioned stations.

PE>I just acquired a TS-950SD with the SM-230 monitor. I have debate as
>to whether to keep or sell the scope.

KEEP IT... NO QUESTIONS ASKED!

PE>I don't do much HF phone or digital modes, although that could
>change. Mostly, CW, contesting. Monitoring rx and tuning the amp
>seem the most likely functions.

Don't plan on doing much meaningful monitoring of RX sigs with the monitor! Too many times, the IF signal picked off for a monitor scope is already after some of the IF filtering or at least after the IF has had an opportunity to 'work' on the signal enough that it can oft times be altered in its appearance. This can produce apparent 'problem' signals when no problems actually exist. You have to be very careful when using a monitor scope to perform definitive analysis of received signals.

On the other hand... using the monitor scope to keep track of your TRANSMITTED signals is one of its very best features... and one major reason you should consider keeping it! Even if you don't work much SSB (yiiipppeee!) monitor scope is an invaluable tuning aide, plus it can indicate your transmitted CW envelope (clicks, make/break problems, harmonics/parasitics, waveform, ripple, etc.). Not to mention that it provides the FASTEST indications for manual tuning of your rig and amplifier. I've used monitor scopes for over 30 years and I cannot imagine being without one. I'd not give mine up for TWICE the price, unless I could use the money to go out and buy a new(er) one, immediately.

PE>Have you used one of these? What's your viewpoint? There are these
>couple of guys who want to buy it and I'm looking for reasons to keep
>it or not.

I hope these reasons convince you to keep the scope. It's probably worth whatever you paid for it.

Hi;
I recieved this lovely little note from Pete deVolpi at amsoft. You read it and decide if this looks like a noncommercial entity publishing a noncommercial newsletter, or a business advertising on the 'net. Pete says it clearly--he thinks I'm attempting to restrain amsoft from doing trade!! Would he think or say something like that if he *WASN'T* doing trade???! You decide. I guess all further criticism of these guys best be done thru the offshore anon servers.... Imagine a thousand corporations just like this one, puking terabytes of commercial ads into the net. It'd be tough just to find the real traffic through the junk mail.

[recieved from amsoft@epix.net]

>:-> Ciao -- 73 de VE6MGS/Mark Salyzyn -sk-

For many months I have tried addressing this problem by emailing the perps and explaining the use of the groups. 99.99% responded with thank you and won't happen again, they just didn't know. The one time I posted a rebuke publically I recieved very repulsive responses from the perps. At the same time I recieved an email from a fellow who said he was in charge of the fac saying he would post an announcement. And that I should stop bothering people with my efforts. I figured the fac announcement would work but it never came and I do have better things to do.

I think that a weekly post on the usage would be enough to do away with any percieved problem. I would just hate these groups turning into another expensive pbbs clogged with garbage for sale post.

FI>W5>Thanks to all that replied with the HD info. It's
>W5>working fine!!

FI>How many times do I have to read messages from hams that send a
>"Thank You" addressed to ALL. When one seeks help and
>someone takes the time to respond, the least the receiver of
>help can do is send a simple individual reply for thanks. After
>all-the respondents to this call for help responded one by one.
>I have received up to 75 messages in a call for help and sent
>individual thanks to each. It was very time consuming, but it
>was the right thing to do.

By the same token, it also served to SUBSTANTIALLY increase the
bandwidth of the traffic which the net had to pass... 75 messages vs
1... sheesh! Talk about glut.

The author of the message you are presently taking to task, actually did
the right thing... he required only a single message to thank all who
responded... many of us don't require a personal 'Thank You' to make us
feel gratified... we are secure in the knowledge that we helped.

Sending out personal 'Thank You' notes following a wedding is 'right'...
and it is at YOUR expense. Doing it here on the net is at the expense
of all SysOps (and readers), and probably doesn't cost you a cent...
you're not hurting yourself, just everyone else.

FI>It is unlikely you will respond to this if you did not even bother to
>respond to someone who H E L P E D you.

An expected parting shot, but totally unwarranted.

If you're responding to requests for assistance solely to receive back
glowing Thank You's, then you're doing it for the WRONG REASON. We're
here to help, not for self-gratification. You should be thankful that
Robert took the time to courteuosly prepare a general thank you note.
Many don't even give you a "kiss my foot" or anything.

Source record: 220819

When I faced the same choice last year, I spent several months trying to pick the rig that'd best fit my own personal needs and values. I ended up with the 990 and have not had any regrets.

But to help you in your own choice -- because, after all, the things that appealled to me may not be the same things you're looking for -- let me outline some of the things I did and the information I collected.

I called a lot of dealers, talked to quite a number of other hams, posted questions here on Internet (as you're doing), pestered the manufacturers to tell me why I should buy their rigs, bought and read the ARRL Radio Buyer's Sourcebooks (a MUST!) and camped out one day at the HRO store in nearby NH to play with the rigs.

Dealers seemed fairly unanimous in my (admittedly, unscientific) poll. They all favored Yaesu based on good experiences with Yaesu's customer support, repair policies, etc. A number of them cited specific instances where Yaesu had gone above and beyond the call of duty to provide free parts or service for rigs long out of production, much less warranty. In the price range we're discussing, all of them identified the 990 as clearly the most popular rig. That impressed me as it seemed to suggest that if I decided, for any reason, to sell it a year later, that there'd be a ready market. In support of that, the dealers gave much more optimistic estimates of resale values for the Yaesu gear than for either Icom or Kenwood. Again, YMMV, but for me this was valuable input.

When I called the manufacturers, Yaesu distinguished themselves as clearly the most responsive. Icom didn't even get around to sending me literature 'till a month or so after I'd already bought the 990 -- pretty slow response when you consider that I spent months collecting information before finally buying. Kenwood was only slightly more responsive. By contrast, Yaesu seemed to bend over backwards. When, for example, I called with a detailed question about the CAT (computer control i/f), they promptly connected me with a fellow who clearly knew it cold and patiently spent answered all my questions about the timing, etc.

The day at HRO was also very illuminating. For me, the 990 seemed to have very good human factors. The controls all seemed to work just as I'd have expected and I found it was easy to get it to do what I wanted. By contrast, I found the Kenwoods very confusing. I thought (and again, let me stress this is all personal opinion and you should definitely go form your own!) the Kenwood controls seemed to be have more confusing labels and function.

Since buying the 990, I've been very pleased. The receiver is excellent. You will hear everything you could possibly work. The filtering options are definitely worthwhile (especially the 250 Hz filter for CW) and really work. The spot function, which allows you to tune a signal 'till you hear a beat, makes using that tight IF filter really easy. The separate digital modes are also very nice: once you've tuned in a signal, you can turn down the speaker/headphone volume w/o affecting the level going to your TNC which is nice.

Overall, this is also a good value. I don't think you can go wrong with the 990.

Hope this helps.

>The other 144/220 that caught my attention was the Kenwood TM-642A,
>especially since there are add-on modules for all the other FM bands.
>Anyone have an opinion on this rig?
>
>Jim
>

Jim,

The IC-2330 is still around, possiably HRO did not advertise it because of
limitations in the catalog, or maybe they though it was also discontinued.

Gary

This may be of no help to you at all, but at the FTP site

sumex-aim.stanford.edu
(I think) in the directory /app

(and all its mirrors) there is a Macintosh-based code-learning program.
It is called MorseTrainer, and is available in US English as well as
several international versions. It's about a year old. The program has
been extremely helpful in my quest to learn CW, but alas, it's a freeware
program, and only transmits code and doesn't let you practice keying.

I'm also looking for any kind of shareware (Mac based) which lets one
practice the Novice/Technician exam. If anyone knows of any, please
e-mail me at "andyneal@ocf.berkeley.edu"

You can contact the author of MorseTrainer, Lars Sundstrom, at:

>process.

>:-> Ciao -- 73 de VE6MGS/Mark Salyzyn -sk-

I think that Mark's proposal, though well-meaning, is somewhat flawed.
The assumptions made here (as I see it) are:

- rec.radio.swap has discussion and rec.radio.amateur.equipment has
forsale stuff, contrary to their charters

- FAQ's pointing people to the right groups have failed to completely
prevent this

- the readers of rec.radio.amateur.equipment will not tolerate
commercial information and advertisements

- the solution is to resolve the incompatibility by forcing the two
interests together into rec.radio.swap

First of all, I don't think that misdirected articles are in the
majority. During the last rec.radio.amateur.* reorg, the convener
(Ian Kluft, ikluft@thunder.sbay.org) did an actual statistical
sampling of article topics and proposed new newsgroups based on the
breakout. Such an objective measurement would be crucial to
evaluating this proposal and deciding whether or not the disadvantages
outweight the advantages (and transcend anyone's opinion, including my
own).

My opinion (somewhat subjective) is that rec.radio.swap is substantially classified ads about a wide range of radio and radio-related equipment (not just amateur or "ham") and rec.radio.amateur.equipment is substantially discussions of amateur-radio-related equipment. More to the point, I think that to throw these two interests and cultures together would not solve the problem, in fact it may inflame the situation (as many readers want to see only classified ads, or only discussion about equipment). Although it doesn't stop all misdirected articles, the separation avoids a lot of run-on meta-discussion and flames about equipment for sale in rec.radio.swap, and a lot of unwanted advertisements in rec.radio.amateur.equipment. A combined group would not be able to wield any peer-pressure to avoid this perceived noise.

Let's not forget that rec.radio.swap is not rec.radio.amateur.swap, because it serves as a forsale and marketplace forum for many other rec.radio.* newsgroups (rec.radio.shortwave, rec.radio.scanner, rec.radio.cb, etc.), whose readers would probably not appreciate being swamped with a lot of strictly amateur-radio-related discussion.

The Internet (and Usenet) has evolved greatly since the Info-Hams mailing list (which spawned the amateur radio newsgroups) ran on Simtel20 at the White Sands Missile Range, and had to avoid any possible appearance of for-profit. In fact, I seriously doubt that any of these so-called "military gateways" dedicated to relaying Info-Hams actually exist anymore (or they relay a wide-range of Usenet newsgroups, and the administrators that run them recognize and accept the risk of commercial content). Commercial advertisements and discussions by people who have business interests in the equipment being discussed are almost inevitable. It's not a question of will such articles appear, it's becoming a question of how best to neatly integrate this type of traffic into the existing newsgroups. For similar reasons to what I stated above, commercial articles in rec.radio.amateur.equipment will be mostly less-than-unbiased plugs for certain brands of equipment, and rec.radio.swap will contain all of the "buy this now at this price" stuff. Combining the two will make for a free-for-all and increase the negative impact of commercial information. I'm not condoning obviously off-topic or "spam" articles, it's just that we may as well get used to some limited commercial presence on our newsgroups.

There is an excellent "Guide to the Personal Radio Newsgroups" that covers much of these issues, the history and culture of many of the newsgroups under rec.radio.*, and which newsgroup is appropriate for what. Unfortunately, it hasn't been posted since about July. Currently the maintainer (Jay Maynard, jmaynard@admin5.hsc.uth.tmc.edu) is having severe technical difficulties getting the articles to propagate (He is using "auto-faq" and the articles post just fine, appearing on his local INN spool, they just aren't propagating to the rest of the net). He's in the process of asking for advice on news.admin.technical and news.software.nntp, so I imagine this problem will be cleared up soon. I would be very interested in seeing if most

of the "problem" clears up once this important article starts to propagate.

In short, I think most readers can tolerate the occasional off-topic material, separate newsgroups and peer-pressure have kept things from getting worse than they are now, it's really not the place of rec.radio.amateur.* readers to usurp rec.radio.swap for their own purposes, we need to give the FAQ articles more chance to have an impact because some of them have been missing from the newsgroups for over 6 months, some degree of commercial posting is inevitable, and "solving" the problem by putting both cats in the same burlap sack is no solution.

I have a nice Collins 75S-3C Receiver for sale. It is a nine on a scale of ten and I will sell it for $750.00
plus UPS shipping. It has a 2.4 KHz SSB filter and covers AM and CW as well. You can reply here or
call me at 702-222-0442.
Thanks, Rich KD6VK

752. Boom microphone/earphone

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-30 03:58:31 UTC
From: rafaels@zimmer.CSUFresno.EDU
Message-ID: <D379pJ.IqE@zimmer.CSUFresno.EDU>
Source record: 220835

Just bought a boom mic/earphone combination at a local hamfest for $1.00!! These units are being sold in almost any hamfest I've been to here in N. California (I assume the sell elsewhere too). The unit is manufactured by Milton Bradley Electronics and it "looks" very good. The problem is that the connector is not standard to fit the micro jack of my Yaesu 530. So I bought one micro plug ($1.90) and soldered the -(red) end of the 2 cables to the tip and the +(white) to the outer ring of the plug. Needless to say that did not work. Has anybody here experimented with this boom mic unit?

Thanks for any advice.

>I was looking at a Yaesu757GX (used) and the salesperson mentioned that
>some people feel that this radio has some "bugs".

John,

The 757 is a essentially a well designed compact rig, which combines
a lot of usefull features for protable operation. It has been used
with great sucess in south sea DXpeditions.

There is *one* bug, that is that the strong signal handling of the
RX is very poor. So in an area where a high level of interference
may be expected (like in Europe) it is not a good choice.

Depending where you live, and on the price, make your choice.

The following items are for sale. They have been packed in a box for the
past 5-6 years.

Kenwood SSB Transceiver - TS-520S
Kenwood MC-50 microphone
Kenwood SP-520 speaker
Dentron Super Tuner
Philmore SWR meter
Regency HR-2 - 2 meter crystal transceiver
Archer 8-ohm headphones
Miniquad antenna
key
Assorted old books

Asking $500/OBO for the whole package.

....

>AD>There seems to be a large price differential between CW filters
> >for the 8.83MHz and the 450 Hz side.

>This is because the manufacturing costs of the 8MHz filters is quite a
>bit higher... it's more difficult to get 8MHz crystals which hit (and
>hold) an accurate frequency... 455kHz crystals are much easier to cut
>and thus less costly.

*** Just a note, I have seen exactly the opposite - the 455 filters are
always more expensive than the 8.83....for both Kenwood and IRCI
filters. I think you just mixed up the IF frequencies in the above
sentence!

AND, I agree that the IRCI filters do a better job under tough conditions.
I use them exclusively in my radio.

From: lumkes@caelab1.cae.wisc.edu
Message-ID: <lumkes.13.2F2D120F@caelab1.cae.wisc.edu>
Source record: 220754

Hi,

I recently aquired a non-functional CB (Radio Shack) which only
hums (loudly) when I connect power to it. The noise is independent
of volume level. I was told this happened because it was connected
to a battery with reverse polarity. Is this possible? I love to tinker
and have been reading several circuit books and would like to try to
fix the problem myself. Where do I start and what do I look for?

John Lumkes
lumkes@cae.wisc.edu

p.s. I take my amatuer exam in two weeks :)

Sorry to post it here but it seems to be more technical in this group then

did automatically go to AM in the aircraft range as you suggest.
The sensitivity is quite poor, I had very limited reception
compared to my handheld scanner experience. And then, even
WORSE news. The unit would not transmit (switch to the offset
frequency) in the ham bands. Had to do the dreaded reset and
lose all 48 memories to restore proper performance.

> 1. Put me down as "opposed". r.r.a.e is my favorite radio-related newsgroup.

I am opposed as well. It is my enjoyment of r.r.a.e that is being tainted by the for-profit postings that prompted me to post this joke article (I am spelling it out as a joke article, as many appear to have missed the sarcastic smiley at the bottom of my article, and for some, I guess, I do need to spell things out ... I figured it would have more effect than a simple `Death of net predicted, can't stand them for-sale ads in this group' kind of posting!)

> 2. r.r.a.e. is generally working OK but with a number of "swap postings".
> (I've recently modified my kill file to try to help with this.)

Pleased post your kill file entries that are working for you!

> 3. What FAQ???? Maybe if we told people what r.r.a.e is for, with a pointer
> to r.r.swap, it would help.

Well, the FAQ apparently did not show at any sites, so I was a bit premature. However, the group had a mission statement as placed into the newsgroups files on most properly administered news machines that should have, in itself, been enough!

I'm very curious where you discovered the information that indicates
it "... contrary to Internet's policy ...". As far as I know, there
IS no such entity as "Internet" to have a policy. Could you be a bit
more specific where you located this policy information? Any sort of
reference will do: ftp, email, http, whatever. I'd like to review
the policy you are talking about before making any further comments.

>if its possible to set this? So far, I've only bee able to get 4.200..and
>not 4.250...
>B) Could someoen photo-copy their TH-215a manual and mail it to me...

This has only one VFO, so u can not do by using the VFO.
But u can do it by storing the non-standard offset to memory 0.

I have a TH215A, but this one never put out the enough power (around
200-500mW) and a small modulation index sinceI had a new one.
I readjusted the mod index, so this is ok, but I need to fix the power.
Could some one send me a copy of service manual ?
I'll pay the incurring cost.

781. ANNOUNCING: Kentrol 5.0 with SkedMan now available!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-30 20:28:41 UTC
From: brian@kentrol.synapse.net
Message-ID: <brian.2.00147AFF@kentrol.synapse.net>
Source record: 220775
Cross-posted to:
rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.shortwave,rec.radio.amateur.equipment,uk.radio.amateur

The leading edge in rig control software just moved forward!

Kentrol has a new version 5.0 and a new partner, SkedMan.

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them you are most welcome to do so.

You can obtain both programs by anonymous ftp from:

ftp.synapse.net/shareware/kentrol

The filenames are, oddly enough, kentrl50.zip and skedmn10.zip.

There is also a Kentrol site on the World Wide Web, for those who have WWW access. At that site you can read the documentation and preview the interface, as well as download the files. The URL is:

http://www.synapse.net/Kentrol/Kentrol.html

Kentrol is also available from major radio-related ftp archives worldwide and on CompuServe, and there are linkds to the Kentrol Web page from all the best ham & swl pages.

Try it. You'll like it!

Make sure that your phone lines are not running parallel to your antenna,
or your antenna lead, if you're using flat lead. Those are two steps in
the first things to do.

What type of phones are you using? If they're some of the newer types, with
all the electronic features, you're more likely to have problems with them.

Also, make sure your station is grounded properly. Use a wire braid to
attach each piece seperatly to a common ground point. Make sure this is
a good ground, put in a grounding rod if it's your own house.

I'm contemplating the Kenwood TH22. Like to hear pro and con on this unit. For a brief time, I had a Yaesu ft11 which i got rid off. I felt it was complex to program. I didnt like the fact that the volume comtrol was on the keyboard, small keys etc etc. I have been told by several salesmen that the Kenwood is better and easier in all respects. (Also, what's everyone's view of the little Radio Shack 2-meter? I hear Icom builds it and that it somes 'stock' with 5 watts. I can get the Kenwood new for $235 and the RS for $210. Thanks in advance.

Please note that a Yaesu FT-530 was stolen in Jamaica,
Queens, New York City yesterday, January 29. The
serial number of the radio was:
3N250276

The Ham who lost it can not really afford to replace it
easily, any information will be held in confidence. We
can repurchase the radio if necessary, and there is a
reward.

If you find the radio, please contact Steve Steinberg,
kb2rve at ss@jh.org or at (718) 206-6996 days, (718) 738-9522
evenings.

Please help to get this radio back to Tony, n2zud, who
loves and cherishes it :-(

BTW: It had a repaired BNC connector and does not look new,
also the case has shrunk.

THANKS!!!!

73, Steve kb2rve

789. Yaesu 2 meter Modification

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-30 23:26:10 UTC
From: drusteba@badlands.NoDak.edu
Message-ID: <D38rrM.wqH@ns1.nodak.edu>
Source record: 220778

Could someone tell me if it is possible to extend the Transmit
frequencies on my Yaesu FT-2400 2m mobile at least into
the 152 MHz area? Although the amateur portion of the 2m
band ends at 148, I would like to be able to transmitt on
my business frequency which is around 151 MHz. The radio
is able to receive all the way up to 174 MHz, but if you
try to transmitt above 150, the display reads "Error".

I suspect that the range of frequencies that you can transmit
on is somehow programed into the radio . Is there any simple
modification that would allow extended coverage? It would
be very useful to be able to use the same radio for
Ham and Business use.

790. Hammarlund HQ-129X 4 Sale

Date: 1995-01-30 23:41:36 UTC
From: searls@batnet.com
Message-ID: <searls-3001951541360001@searls.batnet.com>
Source record: 220768

I was a ham as a young teen in the earliest 60s, and my instrument of reception was a wonderful Hammarlund HQ-129X, which I believe was made in the 1943-53 timeframe. Though I lapsed as a ham when I went away to high school, I kept the instument, and it served me well until I moved to the west coast from North Carolina in '85. At that point I mothballed it in my mother's garage in Graham, NC. To my knowledge, it's still fine.

Then yesterday I was walking around an antique store when I saw a twin of this thing priced at $398.

Made me think: hmmm...

I was ready to take much less than that, years ago. Now that I'm cruising the I-bahn, I thought I'd raise the subject again.

Anybody interested?

Let me know here or by e-mail.

73s,

Doc

In my humble opinion, I think the AmSoft posting was appropriate.
It told me a new version of the product was available and where
to get more information. It was brief, didn't mention prices, and
was posted ONLY to appropriate (ham radio) groups. This is useful
information.

A few facts:

1. Years ago the Internet backbone was government funded and was only
supposed to be used for non-commercial purposes. That changed about
3 or 4 years ago. It is now commercial with no restrictions on
commercial use. I was the Internet contact for our site at the time
so I got all the official info and saw the significant jump in the
monthly bill.

2. Netiquite (sp?) is not law or a contract between network service
providers and users. It is only generally accepted guidelines
of the culture of the newsgroups. There are many newsgroups dedicated
to particular commercial products used for communication between
manufacturers and customers.

3. There are only a few big companies in the ham radio market. The
transceiver manufacturers, AEA, MFJ, and very few others are big
companies that can afford full page ads. Most of the others are
just one person at-home "basement" operations persued nights and
weekends in addition to regular full time jobs. Don't be fooled
by the fancy names like "XYZ Technologies" or "XYZ Research".
I know several people personally who fit into this category. Most
people feel more comfortable dealing with a big company instead
of a basement operation so it really is necessary to give the

the impression of being bigger.
We should thank and encourage these people for bringing us interesting products that larger companies wouldn't want to be bothered with due to tiny market and low margins.

If some one is truly abusive of the communication channel we should scold him and even ask the site administrator to revoke access. However this was not terrible abuse.

73,
John WB2OSZ

Hank Oredson (hanko@wv.mentorg.com) wrote:

: I'm very curious where you discovered the information that indicates
: it "... contrary to Internet's policy ...". As far as I know, there
: IS no such entity as "Internet" to have a policy. Could you be a bit
: more specific where you located this policy information? Any sort of
: reference will do: ftp, email, http, whatever. I'd like to review
: the policy you are talking about before making any further comments.

Any of a number of books at your local library or bookstore can fill you in on the history and evolution of what we now call the "Internet". It's original purpose was to connect Universities and other educational institutions for educational purposes. Major advances in this regard were made by the National Science Foundation. Commercial participation was once excluded or severely restricted. The intended purpose of the "creators" was educational advancement (much of it at taxpayers expense), not providing commercial enterprises with new ways to make money. Commercial connections are now common, the limitations on use much more flexible. There are no laws that I know of which prohibit advertising on the net, however the vast majority of commercial enterprises connected to the net honor the traditional "ban" on overt advertising and limit their use to their own research and development purposes and for business communications. They understand and respect the original purpose and intent of what has become the "Internet", and respect the wishes of the majority of users, as well as the wishes of those who have made "Internet" possible.

Virtually every major business from IBM to Intel to General Motors has Internet access. When was the last time you saw a commercial here from one of them?

Again, there are dozens of books that discuss Internet history and purpose. I've not done it, but I imagine you could also come up with lots of similar info if you do a Gopher search on some key relevant topics.

Feel free to let me know what you discover in your research.

Greg

Dave,

looks like you have already found the answer. Remember that you first of
all need to *hear* the guy before you can have the QSO.

Locally here there are several hams with the 850, and they are all very happy
with it. Yaesu is not so very popular here just now, due to the extremely
poor receiving properties of the 757GX, and folks are afraid, the 990
might have inherited some of it. Of caus every company brings
out better and poorer rigs.

I'm shopping for a multiband hf vertical and have narrowed the choice down to these
Cushcraft R7
MFJ-1798
Butternut HF-9VX.

How do these stack up against each other? Who has some experience that they can pass along in this regard? Do these antennas *really* work on all the bands they're supposed to? Why does the R7 cost $100 more than the others yet have fewer bands (no 80m, 6m or 2m)? What kind of gain can I realistically expect with such an antenna?

I'd appreciate any feedback from you "vertical fans"

Regards,
Paul Schreier, waiting for paper

UR right - had the same problem! Try wrapping a few turns of the
phone line around ferrite sticks - can get 'em out of old TV sets from
the yoke. That might work. Also check all connections in your phone
system for looseness or corrosion which could be causing detection.

There are some RFI-proof phones. The ARRL also has info available from
their mail server about RFI and telephone interference. Right now the
only problem I'm having is with my cordless phone, which I'm told cannot
be solved.

>fix the problem myself. Where do I start and what do I look for?

Well, it may be fried, John, but maybe not. There should be
reverse polarity protection diodes connected to the power input
wiring. Depending on how they are configured, they may have
given their lives to protect the radio, and are now causing
your symptoms.

Radio Shack can order service manuals for their radios from
their national parts office. These are usually pretty cheap.
I'd get the manual and follow the power wiring of the radio
through the protection circuit, testing for bad components.
If after replacing the bad components your buzz remains,
then I'd look at any large electrolytic capacitors that
are used for bypassing or audio coupling. One of them may
have failed under the reverse voltage. Finally, the active
devices in the radio may be fried. If so, it's probably
just a candidate for the junk bin. The loud hum is a good
sign, though. It probably means that at least the audio
output active device is still good.

814. Help on dead receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-31 16:58:30 UTC
From: milway@tecnet1.jcte.jcs.mil
Message-ID: <199501311809.KAA08672@ucsd.edu>
Source record: 220791

The Sony 2010 that I use as backup has suddenly gone completely dead. I replaced the 3 D cells and the 2 AA cells with new ones. Nothing works or lights up. (Yes, the master switch is on.) I would appreciate any suggestions on how to fix it or where to get it serviced. I don't use it much but like to have it around just in case. It worked fine the last time I tried it, but was completely dead this time. It's been sitting quietly on the shelf since the last use. My first thought was that the batteries were dead. I first tried the D cells, then the double A's. I wonder if I should open the case or just send it to a repair place. Also, I'm unsure as to where to to take it for service. Would a local service center that works on Sony TV's and walkmen be a good bet for this unit?

815. HW-24 question

817. Marine VHF Communications

Newsgroup: rec.radio.amateur.equipment
Date: 1995-01-31 18:04:14 UTC
From: bl261@FreeNet.Carleton.CA
Message-ID: <D3A7J2.3A9@freenet.carleton.ca>
Source record: 220794

Hello:

I am part of a team conducting a Communications Review for the Canadian Olympic (training) Regatta Kingston a.k.a. CORK. We are looking at all aspects of comms used in support of day-to-day regatta operations, and I am hoping that sailors and communicators of all types reading this might be able to offer any suggestions.

CORK currently relies on Marine VHF shipboard and hand-held transceivers for Race Committee comms, and ship-to-shore regatta support comms, to support as many as six separate Race Committees and race courses at any one time. Additionally, Citizens'-Band base station and hand-helds are used by Regatta Security personnel, and some borrowed VHF base stations and HTs (hand-helds) are also used by Regatta organizers onshore.

The VHF Marine HTs have been purchased over a long period of time, and the batteries (NiCad) probably need to be replaced; finding a battery source for a variety of different Marine VHF HTs has been a bit of a problem. CORK owns and uses the following makes/models of Marine VHF HTs:

MARINE 5504 / LORAD Black Hawk / LORAD XR100 / SITEX HH-150

CORK also uses a number of base station-type Marine VHF sets, commonly called "tackle-boxes", as they open like a tackle-box, have removable lids, have 1 watt/25 watt power output, and do not have both US & international capability.

Replacement batteries for most Amateur (HAM) Radio HTs are easy enough to find; replacements for Marine VHF units are somewhat more difficult to find.

I have already seen/read the articles in "Practical Sailor", for September 93 (Vol 19, Nbr 17/18) and October 15th 93 (Vol 19, Nbr 20), regarding hand-held VHFs, and February 1st (Vol 20, Nbr 3) and March 1st (Vol 20, Nbr 5) regarding high-end VHF radios and VHF radio tests.

Any other suggestions or ideas from sailors and communicators alike would be greatly appreciated. Deadline for any suggestions is NLT February 15th 1995, as we must submit short and long-term recomendations to the CORK Board of Directors by March 1st.

In Advance, Thanx!

Subject: HELP WITH OSCILLOSCOPE !!!!!!

RO�LH-1 linear amp. I am pushing about 120 watts. Unfortunately although I am
�being told I have a good strong carrier, at times I have very little
�modulation. I own an older model oscilloscope (Hickok Wide Band Model 677) a

Hi; I don't know if the band width of your scope would cover the
75 mtr freq. range or not. If not, you might still be able to see the
RF envelope by connecting the scope's vert. defection plates directly to
your transmitter's RF output. This way you bypass the vertical
amplifier which might limit the scope's freq. range and drive the
vertical plates directly. The voltage from the transmitter is probably
high enough to get sufficient deflection. I think some good info on
the subject would be available in the Radio Ama's handbook. Be
careful. your messing with high voltages!!

: aluminum wire from the basement, and was cured. Phones are pretty
: RF resistant- ulness there is a lot of stray RF running around
: from ground loops and the like

Erik's comment about a "previous house" set me to thinking. I have moved many times in the last 10 years counting rentals and homes I owned I have lived in 6 different houses since 1984. All of them but the last one experienced phone interference when running high power. Various attempts at grounding systems for the shack had little effect. In most cases K-com Filters and ferrites minimized or solved the problem. I assumed that it was the fact that the phones were not designed thandle the field levels put out by 2 kw PEP and such was life.

On my last move I found my dream house on 15 acres in the country. After hooking up the shack I got another pleasant surprise not a hint of Phone RFI ! This would lead one to the conclusion that the phones (same phones in all the houses) are fine and that coupling into the wiring is the bigger factor. I also used to get into the TV in the house particularlry through the VCR. In the new house nothing...not even a jiggle...

Factors to consider this house is 700' from the road and all the utilities come in under ground. It may be that the long trip up to the house for both the buried power lines and phone lines has significantly bypassed these lines through distributive capactive coupling to ground over 700'? In all the other homes the power and phone lines came in above ground. Another way of looking at TVI and Phone RFI would be to consider looking at the wiring in your house in terms of RF grounding rather than the shack itself. Some of you who are out there chasing these problems try bulding RF sniffers and go looking for "hot spots" RF wise along your house wiring, while your "assistant keys up the rig. I have a feeling you will find significant standing waves in your house and phone wiring, and that your problem may be solved by better grounds at multiple points in the house wiring.

By the way I have about a dozen K-Com phone filters I'll be glad to sell you I dont need em anymore!!!

Here is the bottom line on Amsoft and there crap.
Don't buy it.
and if you are on the east coast when you see there booth setup at a hamfest make sure that everyone in the area knows what a bunch of bums they are! In fact if you belong to a club that has a hamfest suggest that perhaps Amsofts business practices are so shady that they may not exactly be a welcome addition to the fest. Bottom line complaing to EPIX which is a fledgling system wont help. Threating Amsoft wont help. Not buying there stuff helps. Letting them KNOW why you are not buying there stuff helps. Remember that Amsofts ONLY customer base is the 600,000 or so hams in the US (I doubt many DX stations really need or want a US call book) It dosen't take many angry hams to truly upset them and make them chamnge there advertising policy
I may make mention of this in my coulmn next month in the club newsletter readership 1000. And if they tell 10 people well you get the picture.

sorry Amsoft Ya blew it!

>
> ... Hank
>
I agree that people shouldn't throw the "policy" terminology around,
especially because the attarction of the NET is that there are really no
hard and fast rules....things happen or do not happen as a result of
"gentlemens' agreements"

Use of the NET for commercial purposes is tempting, but my opinion is
that the best thing to do is for "advertisers" to voluntarily restriuct
their postings to areas set up for it. Otherwise, can you imagine what
some "enterprising" commercial entities would do to these USENET groups?

I use the word "enterprising" in quotes...these people are the same ones
who believe that they are "clever" when they park in a handicapped
parking space and get away with it, and that the rest of us "saps" were
not thinking or not willing to take a risk. We could legislate against
boorish behavior on the NET, but lets hope it never goes that far.

And in case you are wondering, Hank, I'm not some fresh-faced college
kid cooped up in my dorm room pecking away at my computer
at 2:30am philosophizing about how the world SHOULD be (not that there
is anything wrong with that). I'm a professional marketer with a real
soft spot for advertisng and business.

I have used a Butternut HF6v with accessory coils for 30 and 80M
for years. They are well designed, and tune up nicely to the
center of all of the bands. Issues:

1. They are really unobtrusive. Installed in a back yard, you
really have to look to see one from the front of the house. They
are neighbor-friendly.
2. Gain is so-so. You can get out OK if the band is open. Don't
expect to boom in and smash pileups against hose with four element
beams.
3. You must use at least one radial. I usually bury a wire or two
in the bushes. The more the merrier.
4. Installation takes a bit of time. I've move three times with mine.
Do NOT lose the directions :-;.

Source record: 220715

As a former fairly senior Communications Officer in the US Coast Guard Auxiliary, and extra-class Ham, I have had to read all of the books on marine communications. Based on the rules, regulations and potentially massive fines, I have to say I'm a bit leery of using either type of radio for running a big regatta. In the US, using the wrong channel, an accidental curse-word, or failing to identify can bring a $10,000 fine.

If you are in range of a cell-site, I'd rent some cellular phones. Publsh all the various numbers, and use that system for all point -point traffic.

Set up a VHF-FM Marine net, and even use cheap scanners for general status and broadcast information, using trained operators. Also, try to keep an ear on the distress channels. This way you get direct and reasonably private comms, nobody has to learn any rules, and you can't get fined. Make an ironclad rule against persoanl calls from the equipment, and use peer pressure to drive that behavior.

If you have 12v lighter sockets in boats and other places, I'd forget batteries and just run that way. You can get 12v chargers for hand-held batteries from some suppliers. You can replace your radios for what a couple of $85 battery packs would cost. Cellular portables can last 16 hours per battery.

FD>Am looking for HF Amp that is either QSK or compatible with
>aftermarket QSK. Must be wired for 110V and in excellent condx.

If you are interested in an Ameritron AL-80A, give me a call at
314-893-2813 (evenings, after 5 p.m. CST, your nickel please). This is
from an estate that I'm trying to help the family dispose of. The amp
appears to be in VERY GOOD condx. Probably 5-6 years old. I think I
have the bill of sale, but never looked at the sale date. Probably
currently wired for 220 VAC but I know it includes wiring options for
120 VAC, too.

Ameritron/MFJ sells an after-market QSK for their amps, so I think it
should work for this amp as well.

Thanks George;
I spent a few years in the same club as yourself, as well as I
received awards from the same club. I have supported the DLARC
and wont stop that support just because of you. I really dont think
this discussion justifies the anger that is provoked by your response.
As you see below, our newletter offering is not worthy of your anger.

Congratulations....This is the first LOGICAL and UNEMOTIONAL
response, I've seen to this issue. Actually, if more people
would have taken your attitude, and not started exploding
flame mail (do I get flamed for saying this?) it would have been
over quickly. As it is, AMSOFT has gotten TONS of free
advertising, and more word-of-mouth exposure than they ever
expected.

I kind of liked the touch on the part of one AMSOFT rep
who just recently put the WHOLE AD on each of his replies
as his signature file -- nice touch!

As a HAM who let his ticket expire 20 years ago (when I
got married and then joined the USMC), and is just this next
Tuesday re-taking the exam, I have just one question...

Do you guys behave this way on the air? My experience
has always been that of the courteous HAM. Helping the
Novice and "gently" correcting anothers mistake or
indescretion used to be the rule.

I, for one, would try expressing my opinion directly to
the miscreant, rather than e-mails to admins (which
obviously did nothing). I think the folks at AMSOFT might
have responded more favorably to a reasonably-voiced
complaint than to naked aggression. Also, be aware that

AMSOFT needs the HAMS to purchase their goods, so
I don't believe they'ed intentionally want to annoy us to
point of not buying their product(s).

Why does world.std.com sound so familiar? Wasn't someone at that
site also posting ads on the rec.radio groups? This might explain
your `humble opinion':

>In my humble opinion, I think the AmSoft posting was appropriate.
>It told me a new version of the product was available and where
>to get more information. It was brief, didn't mention prices, and
>was posted ONLY to appropriate (ham radio) groups. This is useful
>information.

It was posted to *all* the radio groups many times. If only one post
to .swap had been made no one probably would have minded.

>A few facts:
>
>1. Years ago the Internet backbone was government funded and was only
> supposed to be used for non-commercial purposes. That changed about
> 3 or 4 years ago. It is now commercial with no restrictions on
> commercial use. I was the Internet contact for our site at the time
> so I got all the official info and saw the significant jump in the
> monthly bill.

A very large portion of is is still government funded: State taxpayers
foot the bill for the .edu sites (millions of dollars per year here
to run 5 unix mainframes for 45,000 students/faculty and to pay the
long DX telephone bills to all points in the Pacific). Keep in mind
that a good portion of the traffic that has originated at non-.edu
sites gets passed through those sites. If the state government-funded
.edu sites each pulled their plug Internet would probably cease to exist.
Thus, your `fact' isn't quite factual.

I have a 990 and have never used a 757GX, so I can only speak about
the 900.

The 990's heritage is from the FT-1000 and the receiver is excellent.
The only frustration I've had is hearing stations I didn't have a prayer
of working without a linear. Believe me, you'll definitely hear
all you need.

>Any of a number of books at your local library or bookstore can fill
>you in on the history and evolution of what we now call the
>"Internet". It's original purpose was to connect Universities and
>other educational institutions for educational purposes.

I must disagree herre, don't always believe what you read!! Just because it
is in print does NOT mean that it is in the least bit accurate. In the early
70's the "Internet" as you call it was born out of DARPA, Usenet, and several
other "local" networks. It's original purpose, no matter what is claimed
after the fact, was NOT to connect Universities. It's main purpose was to
allow exchange of information between large gov't agencies and their sub-
contractors, typically universities and such. Don't confuse the facts.

>Major
>advances in this regard were made by the National Science Foundation.
>Commercial participation was once excluded or severely restricted.

I agree with the first inthat the NSF funded research and development along
with others. However commercial participation has always been an important
part of the net...just ask BBN, DEC, etc about this. Ithink the difference
here is that it was better self-controlled... (opinion mine)

>The intended purpose of the "creators" was educational advancement
>(much of it at taxpayers expense), not providing commercial
>enterprises with new ways to make money.

BZZZZTTT! Wrong again read above...it was a gov't funded program...

>Commercial connections are
>now common, the limitations on use much more flexible. There are no
>laws that I know of which prohibit advertising on the net, however the

>vast majority of commercial enterprises connected to the net honor the
>traditional "ban" on overt advertising and limit their use to their
>own research and development purposes and for business communications.

See the above on peer pressure, self control, etc..

>They understand and respect the original purpose and intent of what
>has become the "Internet", and respect the wishes of the majority of
>users, as well as the wishes of those who have made "Internet"
>possible.

Again youmiss the point, read some of teh comp.sys groups and see how well
the big vendors "respect the wishes of the majority". Those companies use
the net as their own....whether you agree or not, that is the fact...

Internet is/was made possible by large donations of money, time and hardware
from big business and the government. Not by some collective of users or
universities. If we waited for academia to decide how to do things we would
still be waiting for an 8bit computer... Keep this inmind as things move
on and we "bite the hand that feeds us" turning the net over to the MCI's,
sprint's etc of the world.

>
>Virtually every major business from IBM to Intel to General Motors has
>Internet access. When was the last time you saw a commercial here
>from one of them?

Read the correct groups and you will see in some way shape or form either
blatant or subtle adverts from them all. They are not going to miss out
on a chance to target their market. How better to beat demographics?? If it
isn't happening in "your" group, IT WILL!

>

>
>I have an IC-751A and would like to get LESS than 7 watts from it for use
>with a transverter. On the 735 there were a few pots to adjust to reduce
>the min power output to 3+ watts.
>
>Is there something similar for the 751A?
>
>Thanx!
Scott,

Yes there a pot to adjust power. Using this will also bring down the high power to about 17 watts too.
The IC-735 has seperate low and high power adjustments, where the IC-751A only had one adjustment. You might
be better using an attenuator to get to the power setting you require, or fashion a alc voltage input device and control
power this way.

Converters work only for getting the modulation. But at 1Hz rate
most of this modulation won't make it through AC coupled audio stages.
You cannot use converters to recover the carrier unless the LO is
locked to the carrier as the phase gets messed up.

Another reason I'd pick to use the filters at the 8.83Mhz IF
is to improve
the receivers IMD due to stations off frequency. The sooner
you select the
desired signal and filter out the undesired the less chance
off Amplifer,
Mixer overload. I've used this basic principle in my
HomeBrew Transceivers
with great success. RF Chain analysis also bears this out.

Lynn,

I had a 290 II for a while and thought it was ok until i used
a rig with a good rx! It was nice to use mobile but for the
extra cash i would try to get the new kenwood. I know it costs
more, but the yaesu (IMHO) just did not stack up.

However, if you get a good deal on one , meaning under $450,
it is a good alternative.

good luck and feel free to reply here or via email

I think it won't.

Most "major businesses" like IBM and General Motors have a Public
Relations department for such "market targeting." There are usually
specific personnel policies to discourage individual employees from
engaging in "public advertisement" of the company. Ever see a .sig
with a disclaimer about not speaking for one's employer? :-)

"Corporate entities" are usually pretty paranoid about offending
people, and advertising in newsgroups tends to offend many people.

I understand the the Yeasu 5200 dual bander is supposed to be cable of 9600 baud packet, but that the manufacturer built it to meet local Japanese spec's. There are evidently two capictors to change. Does anyone know about this?

I find the Ten Tec gear a tad pricy for the features, but I love it.

The service department is FANTASTIC. I toasted a chip in my Paragon last month (I slipped with a test probe), called TT service on Tuesday, and had the new chip on Friday of the same week! Try that with a Japanese rig!

>also tells me there was a serial number qualifier to that. Can anyone
>shed some light on that? What's a good price for a clean one?

I believe the break-overpoint was supposed to be the starto f the
5-million series.

For what it's worth, I (still) have my original '930 (serial 3,xxx,xxx)
and it's been a real workhorse. NO problems... and the receiver appears
to be as quiet at those in the 5-mil series...

MC>If you direct email to me, please use the address below, instead of a

: pretty good for SSB, CW, etc. I'd also like any opinions on the FT-790RII
: also. Maybe ther is a FAQ?

I have the 2 meter version (ft290rII (I think)) it is a good little rig, you would be surprised what you can do on 2.5 watts ssb with a J-pole.

The included linear also works well, but you have to give up the neat battery pack (it's one or the other).

The only defect I see in the rig is that the tone board (useful for FM repeater work) can be turned on and off from the front panel, but you have to remove the battery pack/linear to change the frequency.

Otherwise a nice rig. Combine it with a small 2m beam and you can do lots with it.

Now if there was only someone one 2m ssb to talk to ....

73,

Geoff.

Brian;
I ftp'd a copy of kentrol 5.0 and I do have problems with installing it !
When I do an install (setup thru windows) Kentrol.exe is not placed in
the Program group and when I run Kentrol appropriately I get an error
message "Radio1.RAD" (may not be correct name , but close) not in
directory.
Am I doing something wrong or is something wron with the setup/zip or
whatever.

35th Lafayette Hamfest
March 10-11-12, 1995
Holidome - Holiday Inn Central
Lafayette, Louisiana

The 35th Annual Acadiana Amateur Radio Association (AARA) Lafayette Hamfest
will be held at the Holidome just south of the intersection of I-10 & I-49.

There will be commercial dealers, a flea market, technical forums, tours for
those interested in the area's attractions, the famous AARA fox hunt, and
plenty of Cajun hospitality.

The Quarter Century Wireless Association (QCWA) Cajun Chapter #189 will host
a dutch treat breakfast buffet at 8:00 a.m. on Sunday, March 12th.

FOR MORE INFORMATION:

If you'd like to find out how you can reserve swap tables, or pre-register,
or attend the V.E. test session, or anything else..... Please contact:

I was sorry to hear about this.

Perhaps some public-spirited organization with the technical resources
could implement a list server to receive, accumulate and distribute the
serial numbers of stolen ham gear.

If stolen gear became unsaleable, we would all be far more secure.

Any offers?

In Britain, it is illegal to listen to these things. The penalties
are rather large and/or long. Of course, such a crime is virtually
undetectable unless the perpetrator is either seen doing it, or in some
other way reveals that he has done it, perhaps by posting it on a public
forum ?

One police force used a spoof message (a flying saucer report!) over
its radio system, then sat back and arrested all the scanner toting
fools who turned up at the reported location :-)

Radio users are fast turning to encrypted systems for anything
of any importance, so, if you do try listening, it will likely prove
boring or indecipherable.

Cheers
David

I am running a chase vehicle for a off-road race team. I perfer NOT to pay the inflated prices race-radio companies charge for inferior equipment. I instead would perfer to get my licence and buy a radio I can also use for 2-meter. Here are some questions:

Can a good 2-meter radio (Kenwwod, Icom, etc.) be modified to transmit in the 150 to 154mhz range? Do I need a permit (you dont even need a licence to use a race radio!)?

What is MARS/CAP use?

If I get a handheld, can I get an amp that operates on 12vdc to boost my signal? In a typical race, the car may be as far away as 50+ miles over rough terrain.

Can a 2m base station antenna be easily tuned to 152mhz?

Thank you in advance for any advice in this area. I have contemplated getting into amateur radio for a long time, and this may just push me in!

Source record: 220661
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

In the manual for the 7100, it states there is a 'Transceive' function, which I assume mutes the 7100 when you transmit. The manual sez how to able/disable the function, but doesn't say how to actually make the 7100 mute or whatever.
I just got off the phone with Icom, all the tech help could do was recite what's in the owners' manual, and they didn't seem to have a clue as to how you actually use the function on the 7100.

Does anybody, or do I have to call Japan????

What I want to do is use my Icom IC-726 transceiver to drive a transvr, and use the 7100 as the RX, having it mute when I TX on the 726. There's no 'RX MUTE" jack or anything remotely similar on the 7100. I get the feeling I'll have to put both on the CI-V system and dedicate a computer to do my TX/RX switching.

Great help from Icom Technical, NOT!!!!!

Where are you located? I'd try going directly to the Sony Service Center in the the area, unless you have some friends who you feel are knowledge-able enough to handle it. But, I doubt that's the case, or you wouldn't have posted the query.

I used to work for a Sony authorized servicer, and I know they get the service info for them, but they probably won't have any parts on hand. And, the Sony Service Center has direct access into their national network, letting them find parts at any Sony site in country.

I have a sick Measurement model 59 grid dip meter. The meter is pegged negitive (below zero) at all but highest sensitivity setting, and then it only just comes off zero. It does this with any coil and setting of tune capacitor. The power supply seems OK. Vr tube is fired, and filaments in rectifier and oscillator tube in head are lit. I do not have manual or schematic. I would like to find both of course and any ideas as to trouble. TNX

for Operation from External 12 volt Power.

1. Remove the four black screws and plastic washers holding the front
panel to the radio frame. Remove the front cover by gently pulling it away
>from the radio frame. Watch out for the wires going to the speaker and
microphone.

2. Remove the OPTION switch by unscrewing the tiny black screws mounting
it to the bottom panel. Cut the white wire that goes up from the switch to/
the top of the board, and unsolder or cut the resistor going from the
switch to the grounded transformer can nearby. The removal of the OPTION
switch makes room for the installation of the ten volt regulator.

3. Locate a 7810 three-terminal regulator and bend its heatsink to fit
against the bottom panel while the regulator sits parallel to the front panel.
This means that the heatsink will have a 90 degree bend. Attach the heat-
sink to the bottom panel -- either with a tiny machine screw and nut, or by
loosening the other hardware on the bottom panel, and slipping the heatsink
between the layers of sheet metal. Then retighten the other hardware.
I found that some versions of the 10 volt positive regulator come with a very
thin heatsink that makes this sort of installation possible. The usual 7810
regulator heatsink is too thick, and screw/nut mounting is the only way.

4. Locate the orange wire running from the center pin of the external power
jack (with diode installed) to the power switch. Cut this wire where it
passes the new regulator, and solder the end from the power jack to the
INPUT terminal of the regulator.

5. Install a diode (1N4003 or higher) on the OUTPUT terminal of the new
regulator, anode toward the regulator (arrow pointing away from regulator,
in other words). Now attach the other end of the orange wire (going to the
power switch) to the cathode of the new diode.

6. Nothing need be attached to the GROUND pin of the regulator if the
heatsink is grounded well. If in doubt, add a wire from the GROUND pin
of the regulator to the spot where the OPTION resitor was grounded to
the transformer can.

How it works... The old diode on the center pin of the power jack protects against accidental application of reverse polarity. The incoming 12v goes to the regulator and is dropped to 10v. The new diode drops the 10v down to 9.3 volts (ideal for the radio), AND blocks drainage of the internal batteries by the new regulator.

In article <D3Bopu.Dvt@ruacad.ac.runet.edu>, ddabay@ruacad.ac.runet.edu (Dave Dabay) says:
>
>I must disagree herre, don't always believe what you read!! Just
>because it is in print does NOT mean that it is in the least bit
>accurate. In the early 70's the "Internet" as you call it was born
>out of DARPA, Usenet, and several other "local" networks. It's original
>purpose, no matter what is claimed after the fact, was NOT to connect
>Universities. It's main purpose was to allow exchange of information
>between large gov't agencies and their sub-contractors, typically
>universities and such. Don't confuse the facts.

One amplification of something alluded to above: these messages are
part of USENET, which is NOT the INTERNET. It's always been my
understanding that different policies apply to the small part of the
internet that is usenet. I have no problem with IBM or any other
commercial organization sending email or files via the internet or
setting up FTP sites or Webservers or engaging in any other kind of
commercial activity on the internet. Having my tax money pay for
those activities is like having trucks on the Interstate - I can live
with it as long as they stay out of my way.

I _DO_ object to commercial messages on USENET. I don't enjoy having
my tax money used to pay for somebody to send me advertisements that
are mixed in with the legitimate messages in such a way that it's
extremely difficult to avoid them. That puts me in the position of
paying to be annoyed. If it gets bad enough, I'll say to heck with
it and stop reading the messages. Needless to say, if my congressman
then announces that dropping government subsidies to the usenet would
help balance the budget, I won't object very strongly.

After all, why pay good money so somebody can annoy you for their profit?

Perhaps we need rec.radio.commercials?

Ok Guys, Lets have some more conversation on what the Heath SB-220. Scott, K9MA, sent me his modifications and they really have some merit. I want to know who out there has done the Measures modifications and they worked! Lets have some real theory here as to why or why not the mods he proposes might not work. I am skeptical myself of some of the mods...like the VHF parasitic chokes. But, I think taking out the RC chokes in the grids and just plain grounding them (grounded-grid) would elminate that curious arcing that happens in the unit. Also, I see no harm in putting in bigger diodes, increasing the bleeder resistors, and making sure the meters are protected and work with reasonable acuracy.

Lets get some real discussion going here, not just opinion. After all, we all know how to think. Thanks for the help people....

Forsale, one very nicely assembled W9GR Digital Signal Processor as featured
in the September 1992 issues of both QST and QEX magazines. $195/bo.

The DSP has 10 different filters to choose from. What's more
these filters really work! I've used them on 20 meters many
a time, and they really make a difference in pulling in weak
signals. They are way better than a noise blanker, and can also
improve your notch filter immensely.

Filter #1 Combination noise reducer and automatic notch filter.

Filter #2 Switchable simultaneous automatic notch and denoiser filter

Filter #3 Optimized denoiser filter only

Filter #4 Optimized automatic notch filter

Filter #5-9 CW filters (I have not used these extensively)

Filter #5 400 Hz Linear Phase CW Filter (200Hz bandwidth)

Filter #6 600 Hz Linear Phase CW Filter (200Hz bandwidth)

Filter #7 750 Hz Linear Phase CW Filter (200Hz bandwidth)

Filter #8 1000 Hz Linear Phase CW Filter (200Hz bandwidth)

Filter #9 750 Hz Linear Phase CW Filter (30Hz bandwidth)

Filter #10 HF packet (1600/1800 Hz) or RTTY (2125/2295 Hz) bandpass
filter. The front panel mode switch selects either the packet tones
or the RTTY tones.

I nolonger have any HF equipment, so while the DSP is a pride and joy,
it's pointless for me to keep it, and I need the money.

>If you are in range of a cell-site, I'd rent some cellular phones.
>Publsh all the various numbers, and use that system for all point -point
>traffic.

One of the reasons that Ham Radio will always be better than cellular phones was brought back several years ago by my being in charge of communications for a bicycle Century ride... This is an event where cyclists complete 100 miles in a day, some doing lesser miles... The riders for this event were spread out all over a large south Alabama county...

In my INFINITE wisdom, in addition to amateur radio, I had six cellular phones available... Amateur radio took care of all the communications problems... The cellular phones were valuable only in emergencies... And one would have been plenty... The problems of telling everyone what is going on via cellular phones is enormous... You have to dial all the numbers and say all the information each time... Via ham radio, you just pick up the mike and say it once...

Now, of course, this discussion is about marine radio... I have no knowledge of the specific rules for marine vs. ham radio, but I'd downplay the cellular as the last resort... Have access to one phone for an emergency...

What I discovered is that there is no longer any restriction on
the use of the net for commercial purposes.

I've been "on the net" since well before ARPA funded the initial
connectivity between commercial (not educational) users. Some of
those users WORKED at universities, but the projects which used
the ARPA backbone and the various ad hoc interconnections that
existed prior to the backbone didn't do it just for fun.

Perhaps you need to look at those books (and papers and other documents)
before you make assertions about history.

A ham radio can't legally be used on any comerical band. All transmitters
orher than Ham band radios must be type accepted.

> What is MARS/CAP use?
>
MARS is military amature services

CAP is the cival air patrol

A ham transmitter which is modified for out of band use "MAY" have
spurious outputs on other frequencys than the desired transmit frequency.

What does a race radio cost?

Source record: 220687

Does anyone have information/sources about devices which would allow
direct entry of frequency via keypad into an older HF rig?
The rig is a Yaesu 757GX.
Thanks in advance.
Regards
John

>can also use for 2-meter. Here are some questions:

Your company makes the best land mobile service radios. If you think
they are overpriced, I suggest you take that up with your management.

>Can a good 2-meter radio (Kenwwod, Icom, etc.) be modified to transmit in
>the 150 to 154mhz range? Do I need a permit (you dont even need a licence
>to use a race radio!)?

You *do* need a license for a "race" radio. What these radios actually
are doing is operating on the itenerant channels of the land mobile
service. They are required to be licensed. Anyone who tells you different
is either ignorant of the regulations or lying. Amateur radios are not
Type Accepted for land mobile operations. Modifying them to operate on
these frequencies, while technically possible, would be a violation of
the regulations if you transmit with them.

>What is MARS/CAP use?

The Military Affiliate Radio System is a Department of Defense radio
service, operating on military frequencies. Amateurs may be accepted
to participate in this activity. The Civil Air Patrol service is also
operated on government frequencies to support the SAR functions of the
Civil Air Patrol. Amateurs may also be accepted to participate in this
activity. Type Accepted equipment is not required for either of these
services, so modified amateur radio equipment may be used.

>If I get a handheld, can I get an amp that operates on 12vdc to boost my
>signal? In a typical race, the car may be as far away as 50+ miles over
>rough terrain.
>
>Can a 2m base station antenna be easily tuned to 152mhz?

It's technically possible to do either of these things. However, operation
on land mobile frequencies with amateur equipment is illegal.

>Thank you in advance for any advice in this area. I have contemplated
>getting into amateur radio for a long time, and this may just push me in!

Amateur radio can be used for ocasional personal business under a recent
FCC regulation. So it may be legal to conduct your race support activities

via amateur radio, but you can't use amateur equipment on land mobile channels, and you have to follow the other amateur service rules while operating.

908. IC-736 MARS MOD WANTED!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-03 09:37:06 UTC
From: kitagawa@ee.ES.Osaka-U.AC.JP
Message-ID: <KITAGAWA.95Feb3183701@qed.laser.ee.es.osaka-u.ac.jp>
Source record: 220691

I would like to convert IC-736 into continuous coverage (1.5-30MHz)
high-power oscillator for my lab experiments (a kind of electro-optical
modulation). I know there are many mod information in U.S. because you
need it for MARS. But such information is very difficult to obtain in
Japan even though the manufacturer is in Japan (actually in Osaka, near
our university). If you know how to enable IC-736's transmitter outside
amateur bands, please let me know. Thanks in advance.

It must be IC-736 as we also need 52-54MHz for our experiments. And
automatic impedance matching for 1.5-30MHz and 50-54MHz is rarely found
elsewhere.

>also.

Lynn,

They are reasonable rigs for their prices, however with two serious
disadvantages, you should be aware off:

-Never use a 290 with a substantial linear. The transmitted signal
is not very clean, and when boosted up, it causes serious interference.
I know, there are many hams doing just that, but they don't have
to listen while transmitting.

-On SSB you can allways tell a 290 by its squeaky modulation.
Saves you the standard phrase "The rig here is an FT290..."

So I bought mine for 2m SSB work, but soon got a better
2m rig and now I am using it to drive my 6m and 23cm
transverters, both about 10W out. Works fine.

Before bying a 290 + 690 + 790 you should seriously consider
a proper VHF multibander, (736R, if I remember correctly).
There is the price tag, surely, but you get what you pay for.

>
>Thanks, Bill - W4IRZ

Bill,

Turn off the radio, press and hold the 3,B and # buttons. While holding these buttons turn on the radio. Every character will show up on the display.Wait about 2 seconds and release the buttons. Now go to the set mode one time per band and look for a new function called " PL " in the lower right corner of the display. PL stands for placement and allows you to choose 1, 10, or 100 MHz direct entry. Set it for 100 and you are back to where you were.

No, you don't have to worry about it. FT-990 is more like FT-1000 than
FT-757GX. The choice between FT-990 and TS-850 is almost the matter of
personal preference and I don't have any.

I have a FT-290II for over 4 years now and I am quite happy with it. The receiver sensitivity could be better. It only has two power settings (2.5W/250mW). It is rather bulky to carry around as a portable. But if you must have a portable 2M multimode, then there is nothing to match the 290RII. It works quite well as a mobile/base rig with the clip-on 25W linear amplifier (25W/7W).

Ham Radio Today magazine have lots of conversion articles published, including the BE470. Give them a call for back issues or reprints. You could also e-mail the 'Consultant Technical Editor' of HRT, Chris Lorek G4HCL, regarding the mods. He has written a useful book on PMR conversions. His e-mail address is chris@radshack.demon.co.uk.

I have all of the above as a last resort.

>you must have a portable 2M multimode, then there is nothing to match the
>290RII. It works quite well as a mobile/base rig with the clip-on 25W
>linear amplifier (25W/7W).

I had one for a couple of months and found several features I did
not like:

1) Receiver sensitivity - I suspect that the noise figure is fairly poor;
it certainly is significantly worse in performance than the Kenwood TR-751A
I'm using now. This won't matter if you put a low-noise preamp in front
of it which has 15 or more dB of gain, but that impacts portability.

2) Frequency steps & mode select - The frequency step size is tied to the
selected mode, as it is in most radios. Unfortunately, mode select
is accomplished by "stepping through" all the modes. Getting from USB to
CW requires stepping through FM. So, if I've set the frequency to
144.201.5 in SSB, and wish to switch to CW, then as I repeatedly depress
the mode switch I'll pass through FM, which has a 2.5 kHz minimum step
size, which *resets* the display to the next lowest increment of a 2.5
kHz step, or 144.200.0, so when I get to CW I then have to *re-tune* the
radio.

The Kenwood, on the other hand, has *two* mode buttons; one for
USB/CW, and one for LSB/FM; thus, I can cycle between USB and CW without
changing the frequency setting of the radio.

In like manner to that described above, cycling between step size
on the Yaesu also resets the frequency to the next lowest even increment;
on the Kenwood (which has 50 Hz/5 kHz steps) it does not; i.e., if the
radio is tuned to 144.201.6, changing the step size displays 144.200, but
if the knob is not touched you can press the FS button again and restore
the 144.201.6 display & tuning. In other words, the radio holds the current
tuned frequency *until* you actually retune it, whereas the Yaesu blows
off the selected frequency as soon as you change the step size.

3) Low power setting: With the amplifier clipped on, it's about 7 watts. Unfortunately, it is not adjustable inside the radio (Kenwood's low power setting is adjustable from about 2-3 watts up to the max of 25 watts, which makes it ideal for setting up to drive an external "brick").

4) The key and external speaker jacks are on the *side* of the radio, not the back.

5) There is no external PTT available on the Yaesu.

However, if portability and particularly back-packing is your bag, the Yaesu is definitely the more suited for that kind of operation. It is rugged, well-built, pretty simple to operate and is easily powered with the portable battery pack and carried in the bag/shoulder strap arrangement.

But the Kenwood is better-suited to serious fixed/mobile SSB/CW operation (not without its flaws, mind you, but that's a subject for another day.....besides, they quit making it - *BIG* mistake, IMO).

Do you have evidence to back up this assertion?

It is *illegal* to park in handicapped parking spaces, at least
in most jurisdictions. It is not *illegal* to post commercial
messages to usenet. You have here compared an *illegal* act to
an act *which you personally consider objectionable*.

If you wish a newsgroup without advertising, then you should take
those actions which will lead to such a newsgroup: a call for
moderation of the group, or a call for a new (moderated) group.
Within usenet, this is the only mechanism available to control
content - other than peer pressure ... and you will lose this one.

In regards to the question you ask Rachel, I got my Tech ticket about mid summer and had some of the same questions. Here are some of my feelings as I begin to approch the one year mark....

I picked up a cheap 2meter HT from the Shack (Radio that is) and it has served me well (water, concrete, lots of dirt, etc); however, it is not light or pretty. Anyway, for $170 it is a great start machine.

If I had my druthers I would love to play with the new HT's on 2m, 440, and 1.2Ghz.

The first rule you must set is how much do you want to spend (can you might be better in some cases).

The second step is to find out which band you would like to talk on. I have been stuck on 2m due to budget (I am after and above all a student). From what others tell me, here in Fresno, the educated are more populus on 440Mhz. This might differ in your area. A good idea is to ask around if you can. If not, 2m is a safe start; but, don't spend to much (maybe used if you are worried) on the first HT.

As far as autopatch, there is are a lot of benifits to be gained here. I believe that 2m is the most popular place to find autopatch access. Some repeaters offer 440 links to the 2m patches. Asking around, again, might help you with your area. (Here in Fresno we have an open patch which is the only one I have heard of in CA (I know there must be more? maybe?)) In order to get on an autopatch you will need a DTMF pad. This pad is like a telephone key pad plus it has A-D keys. Next you will probably need to be a member of a club to get the codes (I am a member of 3 clubs and 2 turned off the patches within days of my joining (not my fault)).

Moble or HandieTalkie..Do you drive all the time or work on a ranch. What would you use more. For example if you were to buy a moble phone would you mount it in your car or pocket it. I think HT is a good start because it is less $$ and you can take it into the house and bug anyone inside (not just the people riding with you in the car). The HT in the car will need an external antenna. This becomes a pain to hook up every time you get in the car.

Anyway, good luck in your search, and the test (that's easy if you have all of the questions from the test (ie The Shack).

Good luck...
Carlos Rogers

I recently read a post about Kenwood filters and an alternate source to
Kenwood was mentioned by the name of International Radio and Computer.
At least, thats what I remember the name to be. I have browsed through
most of the recent mags and can find no advertisements for a company
by that name. I'm looking to buy additional IF filters for my TS-850S
and would like to check out any possible sources.
Any one with info can either post here or e-mail me.

>content - other than peer pressure ... and you will lose this one.

No, there's also Cancelmoose[tm] and the advent of other cancelbot style-solutions to the spammers on the net. I agree that peer pressure is not likely to work--as long as a company has the potential to make so much as one sale, he's going to post ads to the net if he has no respect for the desires of the group's readers. I saw a post that suggested creating a group like rec.radio.amateur.ads to have a place where those who desire to read ads can go. But the advertisers wish to invite themselves into our living rooms and shacks, rather than place their ads on our doorstep.

Again, I refer those who feel imposed upon by spam ads to check out alt.current-events.net-abuse for some very enlightening reading, starting with the FAQs there.

From: willco788@aol.com
Message-ID: <3gv26k$rie@newsbf02.news.aol.com>
Source record: 220622

THIS INFORMATION WILL COMPLEMENT THE PRODUCT REVIEW THAT WAS
PRESENTED IN THE JULY 94 ISSUE OF QST (PAGE 79)

THE WILLCO ELECTRONICS ICM-1024 ("NO FAIL" MEMORY FOR ICOM RADIOS)
CONTAINS A READ ONLY MEMORY THAT STORES THE RADIO'S IMPORTANT DATA.
WHEN THE BACKUP BATTERY DIES, THE RADIO WON'T FAIL!

MORE MEMORIES THAN YOU'LL EVER NEED!

USING A 32k RAM THE ICM-1024 INCREASES THE MEMORY SIZE 32 TIMES
PROVIDING UP TO 1024 LOCATIONS (INCLUDING THE IC-745) FOR FREQUENCY
AND MODE TO HELP YOU MANAGE YOUR FREQUENCIES, WILLCO ELECTRONICS
PROVIDES A MEMORY LOG SHEET AND UTILITY WORLD'S HOT 250 H.F.
FREQUENCIES ARE PRE LOADED ("UTILITY WORLD" IS EDITED BY LARRY
VAN HORN AND PUBLISHED BY MONITORING TIMES MAGAZINE).

EASY TO INSTALL

THE ICM-1024 IS EASY TO INSTALL AND IT CAN BE USED AS A 32 CHANNEL
DIRECT REPLACEMENT FOR ICOM'S EX-314 RAM UNIT.

WHEN INSTALLED IN THE R71 or IC-751, THE 32 BANKS CAN BE ACCESSED
DIRECTLY FROM THE RADIO'S FRONT PANEL WITHOUT ADDING PUSH BUTTONS
OR SWITCHES. THE HEART OF THE ICM-1024 IS A CUSTOM INTEGRATED CIRCUIT
THAT HANDLES DATA AND BANK SWITCHING. (THE IC-745 REQUIRES EXTERNAL
SWITCHES.)

HERE'S HOW IT WORKS

BY CONNECTING THE ICM-1024 RIBBON CABLE TO THE R71 MATRIX BOARD, THE
MEMORY NUMBER (THAT'S DISPLAYED ON THE RADIOS FRONT PANEL) CAN BE USED
TO CHANGE THE BANK NUMBER.

WITH OR WITHOUT THE IC-EX310 SPEECH MODULE , THE SPEECH BUTTON ON
YOUR R71 WILL SERVE AS A BANK=MEMORY SWITCH. TO RAPIDLY CHANGE BANKS,
SIMPLY ROTATE THE MEMORY KNOB AND SELECT A MEMORY. THEN PRESS THE
SPEECH BUTTON AND THE BANK, (THAT CORRESPONDS TO THE MEMORY NUMBER)
WILL BE SELECTED.

EACH TIME YOU PRESS THE SPEECH BUTTON ON THE IC-751, YOU STEP TO THE
NEXT BANK. THE FUNCTION BUTTON REVERSES THE STEP DIRECTION AND THE
XIT/RIT RESET BUTTON JUMPS YOU BACK TO BANK 1. THE IC-745 REQUIRES
3 EXTERNAL SWITCHES.

BY PLACING A FREQUENCY (THAT CORRESPONDS TO A BANK) IN A MEMORY
LOCATION, YOU CAN DETERMINE THE BANK NUMBER. FOR EXAMPLE, 2.2 MHz
IN MEMORY 32 CAN INDICATE THAT BANK 22 WAS SELECTED.

EXTENDED FREQUENCIES

THE RECEIVE FREQUENCY LIMITS ROM WHERE MODIFIED AND NOW THE RADIO CAN TUNE FROM 10KHz TO 31 MHz. (MODELS IC-751, IC-751A, IC-745 AND R71).

CONTACT; WILLCO ELECTRONICS, P.O. BOX 788, NEW LENOX, IL 60451.

>and a place that I might find these... I need two....

Assuming the use of such electronic aids is legal where you hunt deer,
it isn't in Georgia, what you're looking for is the Maxon unit. It
operates on 49 MHz, has VOX and headset, and is in your price range.
They are available in lots of places. A motorcycle shop would be a
good place to look, as well as in some of the many electronic catalogs.
I believe I saw them in Sportsman's Guide recently.

952. ICOM - W2A extended recei

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-04 16:32:00 UTC
From: clint.bradford@ectech.com
Message-ID: <9502041049142360@ectech.com>
Source record: 220635

(Continued from previous message)

One method of installing diodes D1 and D3 is to use a very small drop of super glue to mount the part, and then use a soldering iron to tack down the pins.

After the parts are installed, reassemble the radio. Although the manufacturer recommends that the microprocessor be reset after this mod, I have found it to be unnecessary. All memories retained their settings after the mod. Tests using a dummy load and a frequency counter showed TX ability on UHF from under 400MHz to over 490MHz. TX on VHF covers from 136MHz to 174MHz.

==========
I haven't tried or verified this, proceed at your own risk. WA2ISE

I reset the unit and have lost the sequence.....as I recall, you had to hold down three buttons while you turned the rig on.

Modification Instructions for the IC-W2A Handheld

Two mods, one for Cross Band Repeat and one for extended TX range

Cross Band Repeat Function

To access the cross-band repeat function, first perform the extended receive mod by holding down the Light/B/# keys while turning on the power.

To enable cross-band repeat, set each band to the frequency and mode desired. Set the current band to VHF.

Press (Function-2) (Function-Enter) and the little "L" indicator will flash. The radio is now in the cross-band repeat mode. Do disable, press (Function-Enter) again.

Extended Transmit Mod

Call the ICOM parts department and order a pair of
MA133 diodes (P/N 1790000850). These are the three terminal surface mount diode packages. It is probably not advisable to substitute conventional leaded glass diodes here due to size restraints.

The modification involves removing one surface mount component and installing two others. The working parts are extremely small and the mod should not be performed unless you are comfortable with working while using a loop eyepiece or other magnifying device. This is a "surgical" operation. Take all the usual precautions with respect to static electricity, etc.

Remove 5 screws holding back on, and two screws on side of case below the PTT switch. Gently pry the unit apart.

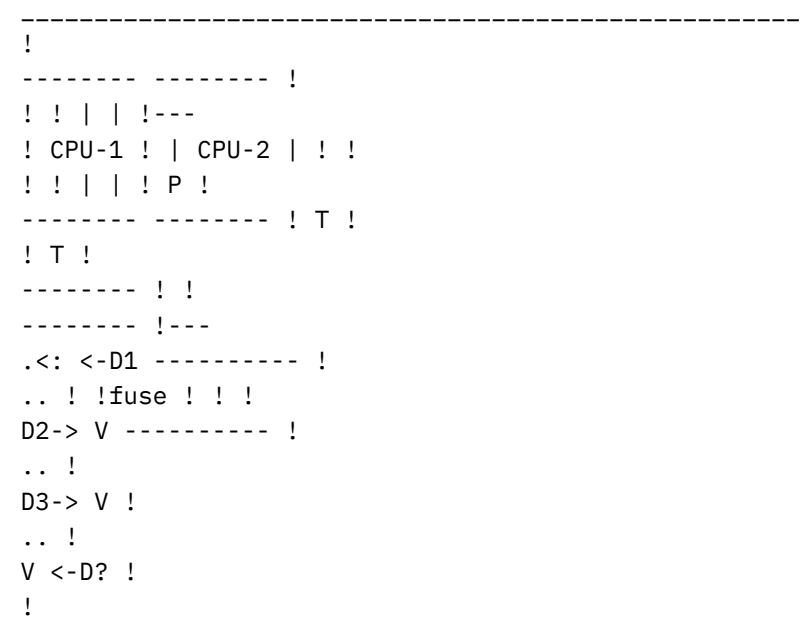
Inside the unit are two RF "stack" units. The complete RF "stack" is composed of two enclosed sheet metal boxes sandwiched together, about 1.5" wide, 2" tall and .5" thick. Each RF stack unit (one per band) is totally self contained, is about .25" thick, and plugs into the "motherboard" using connectors mounted on one end.

First, remove the stack units. To do this, remove one screw from each side of the stack. Remove the single screw off the bottom end of the stack and gently remove the metal spring clip holding the stack together.

Carefully lift each stack unit out by pulling it back and down. They should easily unplug from the upper motherboard. Set them aside for now.

At this time the back side of the front panel is clearly accessible and the two CPU's are visible side-by-side across the top. Now refer to the following illustration:

Top of Radio, Back side of Front Panel



D1, D2 and D3 are locations on the board. Only D2 is installed at the factory. To perform the mod, you must do the following:

Remove D2
Install D1
Install D3

The locations of D1 and D3 are clearly silk screened onto the circuit board and are easy to locate. Don't attempt to re-use D2. The periods (..) show the approximate location of the solder pads for the 2-legged sides of the diodes.

Diode D2 may be removed by carefully heating the leads and prying it up using a sharp tool. Be very careful since it's easy to lift the solder pads.

From: dabloodgod@aol.com
Message-ID: <3h0i5j$561@newsbf02.news.aol.com>
Source record: 220637

Fractional-N synthesizers use different values of N - toggling between N and N+1 back and forth repetively. This way the average loop divider can be between N and N+1 - say for example N+0.5 if the divider is = N 1/2 of the time and N+1 1/2 of the time. Needless to say, the values of the fraction that are available are a function of the control circuitry of the synthesizer. There are interesting techniques for suppressing the spurs that are come with the fractional N synthesizers.

962. TV/Phone Interference problems, Help!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-05 01:54:43 UTC
From: dmassarik@aol.com
Message-ID: <3h1b53$a5h@newsbf02.news.aol.com>
Source record: 220546

I am not a radio expert so please excuse any technical errors below:

My back door neighbor is a CB radio hobbiest. I have been having interference problems with my phones, TV, stereo, and ProAudio Studio sound card in my Windows NT system. I hear my neighbor's voice clearly on the systems above when he transmits. It is bad enough that when he is online, I cannot connect with my modem on my home phone lines. And my stereo speakers are filled with noise/voice. I have had the phone co. out and they installed RF filters on my lines. That did not help. So I call the FCC and got the "Interference Handbook". I went over to my neighbor with the book and we had a chat. He is very agreeable and we are both trying to solve the problem together.

His setup includes: A Galaxy Turbo 11 meter radio , omni whip antenna (mounted on a tree ABOVE my house in altitude), an alternate directional 7 element antenna (mounted on a 18ft stand EQUAL altitude to my home). He does not use a linear amp and has tried a cheapie low pass filter (but it made no difference). The whip antenna gives the worst interference in my home. The directional (depending on orientation) is better but still unacceptable. His radio has a ground strap.

1. Can anyone recommend things that I can do on my end to reduce my computer, TV, phone, stereo susceptibility?

2. Can anyone recommend configuration changes or a good filter (please give $$, model and vendor phone if possible) for my neighbor's system?

thanks,
dmassarik@aol.com

966. Re: More SB-220

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-05 06:01:05 UTC
From: w8jitom@aol.com
Message-ID: <3h1pj1$dbe@newsbf02.news.aol.com>
Source record: 220550

I know this is a long posting but perhaps you can pick an area to debate. I was an RF consultant for Heathkit, so I have some experience with their amplifiers. I was privy to the actual reasons certain choices were made in design. For example, the chokes and mica caps in the SB-220 grid were a simple mistake. They were copied from a June 1967 QST article by Bill Orr, which was seriously flawed because it ignored some basic technical facts. The net result of the chokes and caps in the SB-220 grid are that the amplifier is destabilized, gain flatness is reduced, and IMD performance suffers. If Heath had continued in the amateur business that was going to be corrected. The following is an excerpt from a letter I sent to QST.

Reference: January 1994 QST Article "The Nearly Perfect Amplifier" by Mr. R. Measures

The article, "The Nearly Perfect Amplifier" by Mr. Richard Measures published in the January 1994 QST, as well as his previous amplifier articles, contains a great deal of unscientific and inaccurate information. Many of the conclusions reached by the author are directly in conflict with the findings of thousands of failure analysis investigations conducted by reputable manufacturers of amplifiers and amplifier components. His suggestions seem to be based more on electronic voodoo than sound engineering.

The article states that VHF and UHF Parasitics result in super- heated grid surfaces, magnetically bent grids and filaments, destruction of tank capacitors, damaged band switches and will initiate cathode to anode arcing. While VHF and UHF Parasitics are undesirable characteristics and must be avoided, there is no basis in amplifier tube theory or actual experience to support such conclusions. They are not supported by design theory or the experience of recognized experts in the RF amplifier community which include Eimac, Seimens, ETO, Henry, and Ameritron. In fact, it is absolutely impossible to perform a failure analysis of a tube and determine if the failure resulted from excessive VHF- UHF grid current, or from HF- dc current!

The article further states that its' author has, "never found a tube damaged by excessive HF grid current." This statement is contrary to common sense and the experience of manufacturers of power grid tubes. It is also contrary to the sad experiences of those hams who have inadvertently driven the fuse or resistor protected grid of a 3CX1500 or 3CX800 with as little as a hundred watts for only a moment.

In contrast, those who have attempted to over-drive carefully designed home-brew or commercially engineered electronically protected amplifiers, have found that their tubes survive. To replace these fast responding circuits with fuses or resistors would be foolish. Fuses are notorious for

their slow response to overloads, and resistors are worse. Overloads in grid circuits must be controlled in milliseconds. Fuses and resistors cannot provide this capability.

Inrush current to a tube's filament does have a deleterious affect on the filament. Inrush current can affect all types of tubes, although problems are very rare in the types of tubes and with the size of filament transformers used in amateur service. Contrary to the statements presented in the article the principal damage has been found to be thermal in nature and not magnetic. Inrush is an accumulated damage caused by hundreds or thousands of excessively rapid cold to hot temperature transitions. Inrush damage is a direct function of number of cold to hot cycles as well as the intensity and duration of surge currents.

Glitch protection must consider the ESR (equivalent series resistance) of the components in the high voltage circuit. Typical high voltage electrolytics may exhibit more than 1 ohm of ESR per capacitor. When the RF choke and other component resistances are added to the capacitor's ESR, the total supply resistance generally exceeds ten ohms. The addition of a ten ohm resistor may only offer a negligible improvement in most circuits. Additionally, it is alarming to note that the article recommends the use of a resistor rated at 500 volts. Any device rated at 500 volts is subject to catastrophic failure if subjected to the stress of several thousand volts. The manufacturer of this resistor, and manufacturers of similar style resistors, absolutely do not endorse the use of this type of resistor in this application. The correct component would be an energy absorbing type of resistor such as the Carborundum SP type, or RCD Corporation's PCN type. The PCN series resistor for this application should be rated at eighty watts or more dissipation to safely handle the stored energy of 25 mFd of capacitance charged to 3 kilovolts.

Equalization of voltage through the power supply rectifier string is important. However, the article incorrectly places emphasis on equalization of current. Low cost diode rectifiers must be protected by equalization of the reverse voltage since they are not matched for capacitance or reverse leakage resistance. Manufacturers of these devices simply put them through a go-no-go type of acceptance test. The reverse voltage characteristics of individual diodes can vary considerably from device to device. During a discussion with a Motorola power rectifier engineer to verify my understanding of their testing procedures, he made the following statement: "Diodes are not matched, only tested in a go-no-go test. There is no guarantee that like marked diodes are from the same country let alone the same manufacturing lot. Even if diodes were matched, they would have to be maintained at relatively close temperatures to one another to insure they stay matched."

The article is again in error where it recommends the use of a 'Carte blanche' equalizing resistor for electrolytic filters. The leakage current range of an electrolytic is very important in determining the proper resistor value. Different types of capacitors require different values of resistance. Correct values should be selected from information

supplied by the capacitor manufacturer. If this information is not available a good rule of thumb is to use the lowest value of resistance that can be tolerated in the application. The suggestion of avoiding carbon resistors in this critical application is absolutely correct.

The commentary regarding electronic bias switches having a deleterious affect on amplifier performance is misleading. It is possible, with poor design and poor construction, to build an electronic bias switch which would result in excessive IMD (intermodulation distortion) in an amplifier. However, properly designed and constructed electronic bias switches, such as those used by reputable amplifier manufacturers or skilled amateurs, will not cause any deterioration in the IMD characteristics of an amplifier.

The most misleading and erroneous statements in the article are those addressing VHF stability. As stated earlier, parasitics oscillations do not bend grids or filaments. Nor do they cause bandswitches and tuning capacitors to fail. The use of nichrome wire in the parasitic suppressor coil does not significantly change the "Q" of the suppressor at VHF or UHF. Nichrome suppressor coils will lower the "Q" at HF. This is because the coil is the primary path for HF signals and the suppressor's resistor is the primary path for VHF and UHF signals. It appears from the statements in the article that the author simply does not understand how a parasitic suppression system functions, nor how the proposed design will adversely affect the desired performance of an HF amplifier. The experience of the technical community, including both manufacturers and knowledgeable amateurs, absolutely contradicts the conclusions of this section of the article.

Lastly the comments regarding adjustable tuned inputs are incorrect. The article implies that the reactance of the output network of a transceiver affects the input SWR of an amplifier. This finding is without basis in theory or practice. The output impedance of a source has nothing to do with the input impedance of a load.

I hope that correcting the misleading and erroneous statements of the January article may prevent our fellow hams from making unnecessary or damaging modifications to their equipment. The high voltage circuits in these amplifiers are lethal and must be handled with great care by experienced people. It would be tragic to have someone hurt while implementing one of the suggested useless changes.

967. Radio Shack HTX series Hand Helds

970. PC BOARD ETCH TANK 1/2

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-05 11:19:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.9336.7583.0NFB9173@woodybbs.com>
Source record: 220553

Several years ago, I was asked to describe a PC board etching system which I'd built.

Since the subject comes up occasionally, I though it might be worth re-posting the desription.

In the following description, I refer to 'junk' 1/4" plexiglass. This is because I was fortunate enough to locate a local glass installation company which kept boxes of broken (and 'wrong sized') plexiglass on hand. I was able to buy substantial amounts of this 'junk' plexiglass for next to nothing. Even if you have to have to buy new plexiglass, it shouldn't cost much, since there's not all that much required for the project. Just about ANY thickness of plexiglass will work, it's just that 1/4" seems to be the most readily available thickness.

References to 'silicone caulk' or 'silicone glue' indicate the same material, just used for slightly different purposes. Clear or white silicone sealer (caulking) will suffice in either case.

TH> A dip in the etchant (warmed to about 90-100 degrees and sprayed
TH> onto the board, placed vertically in a small aquarium, does the
TH> etching in only a few minutes (compared to 20-30 minutes using the
TH> tried and true 'slosh' method).

CC>Please describe your "spraying" technique more fully, I hate "sloshing" my boards!

It's really pretty simple...

1. Go to your friendly neighborhood junk (or hardware) store and find a CLEAN, rectangular, 5-gallon GLASS aquarium (hereinafter referred to as 'the tank').

2. Even if the tank is new, seal (caulk) all corners and edges with ample amounts silicone sealer. If the tank is already sealed with silicone sealer, you probably won't have to re-seal it, but if you cannot see what type of caulking has been used at ALL corners and edges, or if you're not sure of how well it's been caulked, it's best to do your own caulking job.

3. Go to the hardware store and shop around for a water pump which has a long (8"-10") shaft with the motor on the top and the impeller on the bottom. I found an AMXCO (American Excelsior Co.) #578 pump which has a plastic body and impeller. The shaft is made of steel, so I disassembled the plastic body and completely coated the metal shaft with epoxy to keep the etchant from attacking the metal. Then I reassembled the pump. This is a bottom-feed pump with a 1/4" to

5/16" output port right above the impeller housing. The pump is not all that high priced (less than $25) and it has more than adequate power to push a lot of etchant around in the tank.

NOTE: I had originally tried a "Little Giant" submersible water pump in this application. While the pump worked quite well, it was FILLED with a cooling oil and, once overheated, the sealing gasket let go and I had an etch tank full of etchant mixed with cooling oil... ruining my PC board and my etchant. The pump I now use is quite a bit lower priced and works just as well... maybe even better.

4. While you're at the store, pick up about 4'-5' of clear plastic tubing which fits TIGHTLY onto the output port of the pump. Plan on using a small hose clamp to ensure that the tube fits securely onto the output port... I found that the pump can propel ferric chloride about 8'-10' if the tube comes off. In my case, that was just about 2 feet PAST where my wife (N0IJY) was keeping her winter clothes!!!! Tom was in trouble once again!

BE SURE TO CHECK YOUR HOSE-TO-OUTPUT PORT CONNECTION EACH TIME BEFORE YOU RUN THE PUMP!

5. PUMP OVERSPRAY SHIELD

Cut a piece of 1/4" junk plexiglass so it just fits inside the narrow width of the tank and so when it's flush (vertically) against the top edge of the tank, it gives a 1/2" space at the bottom (e.g. if the tank is 8"h x 9"w x 14"d measured on the INSIDE, the partition is cut to 7-1/2"h x 9"w.

6. Place the pump into the tank, up against one end and temporarily place the OVERSPRAY SHIELD not quite up against the inside edge of the pump (allow an extra 1/2" or so). You should be able to EASILY insert and remove the pump. The plexiglass is there to help protect (kinda) the pump from too much overspray of the etchant. Using a permanent ink marker (e.g. Sharpie), mark the intended position of the overspray shield and use silicone sealer to glue the shield into place, placing the plexiglass as high (vertically) in the tank as possible, to allow the etchant to run UNDER the bottom edge into the pump intake.

7. PC BOARD SUPPORT PLATE

Cut another piece of junk plexiglass to the width of the tank and about 10" long. This plate will be placed diagonally in the tank, so it can be longer than the tank is tall. This will be the PC BOARD SUPPORT PLATE on which the PC board rests as it's being etched.

Situate the PC BOARD SUPPORT PLATE on a diagonal from about 1" in from the top end of the tank (OPPOSITE of the pump) and allow the plexiglass to angle down at an angle NO LESS than 45 degrees toward

the bottom of the tank. Allow a 1" gap between the bottom of the tank and the plexiglass for etchant flow. DO NOT GLUE THIS PIECE IN PLACE! Use a permanent ink marker and mark (on the sides of the tank) the intended position of the top and bottom of the PC BOARD SUPPORT PLATE.

8. SUPPORT PLATE RAILS (on which the PC BOARD SUPPORT PLATE rests)

Cut two (6" x 1/2") plexiglass strips. These strips will be silicone glued into place (against the sidewalls) along the (BACK SIDE of the) marks you made to indicate where the PC BOARD SUPPORT PLATE is to sit. They will be best attached by running a fairly thin bead of silicone glue (caulk) along the length of one flat side of each strip and then placing it against the wall of the tank, pressing out as much excess silicone glue as possible.

Once the silicone glue for these two rails is set, CAREFULLY remove any excess glue which appears on the TOP (upper) edge of each rail. Excess silicone glue will not allow the PC BOARD SUPPORT to securely rest against the rails.

9. SUPPORT PLATE STOPS (against which the bottom edge of the PC BOARD SUPPORT PLATE will rest when in the tank)

Cut two (1" x 1/2") plexiglass strips. Lay the PC BOARD SUPPORT PLATE on the SUPPORT PLATE RAILS installed in step 9, and mark where the BOTTOM edge of the plate is resting. Then, silicone glue these two strips (against the sidewalls) at right angles to the long strips. These serve as the end stops for the PC BOARD SUPPORT PLATE, to keep it from sliding down to the bottom of the tank. These strips should protrude far enough in front of the SUPPORT PLATE RAILS to ensure that the PC BOARD SUPPORT PLATE cannot slip off them during etching.

10. Drill lines of (4 to 5) holes in the PC BOARD SUPPORT PLATE, starting about 1" from the bottom edge and continuing up to about half way up the height of the plate, in 1' increments. The holes will be for sticking TOOTHPICKS in, to use as PC board supports (bottom rests) when you're etching. Make the holes small enough that standard, round, toothpicks can be placed in them snuggly enough that the toothpicks will not fall out during the etching process. Toothpicks are used because they are cheap and easy to

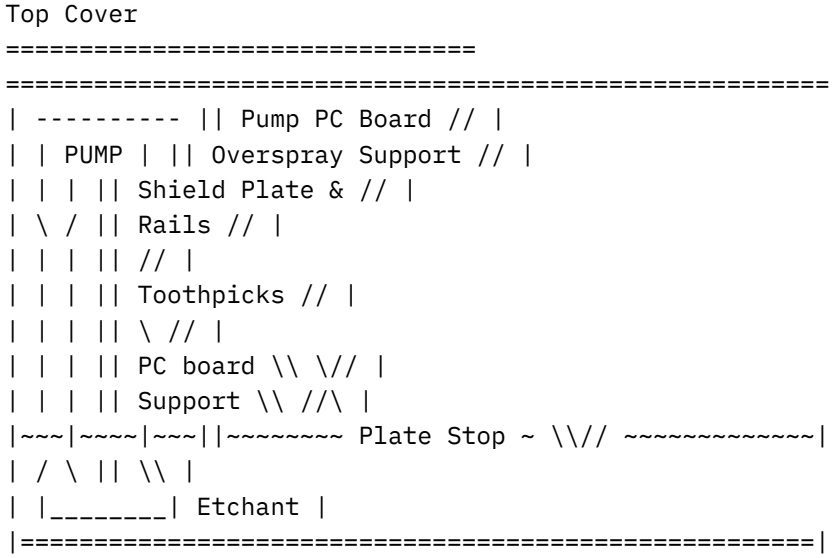
>>> Continued from previous message
11. TOP COVER

Finally (whew!) cut a plexiglass plate to cover the top of the tank, from the end opposite the pump to about 2" short of covering the vertical Pump Overspray Shield. This, you can just lay on top of the tank when you are working. It helps to reduce (BUT NOT COMPLETELY ELIMINATE) the amount of overspray from etching.

Top Cover



This completes the construction of the etching tank and system.

Now, here's how I set it up:

1. Fill a bucket with at least one gallon of fresh water.

2. Set up tank with the pump in one end and the PC board support plate in place on its support strips.

3. Place the pump (hose installed) into its compartment at one end of the tank.

4. Determine how high the PC board will need to be placed on the PC Board Support Plate for etching (normally just above the top of the etchant) and insert two round wooden toothpicks into the set of holes holes closest to the intended bottom edge of the PC board. Install the PC BOard Support Plate in the tank and rest the PC board on the support plate and the toothpicks.

5. Pour one gallon of ferric chloride into the tank.

6. Place the plexiglass cover on top of the tank.

7. GRAD HOLD(!) of the etchant hose (from the pump) and place the output end INSIDE the tank, between the top cover and the Pump Overspray Plate, aimed DOWN toward the bottom of the tank.

8. Plug the pump on and get the feel of the etchant as it flows through the tubing. Then play the etchant back and forth against the PC board, using the flow to 'wash' the etched copper away as it dissolves.

9. When etching is complete, unplug the pump and DO NOT allow the end of the tube to drop lower than the tank or all of the ferric chloride will siphon into your shoes!

Raise the tube to clear it of remaining ferric chloride and allow it to loop back into the tank, so the tank will catch any errant drips.

10. Carefully lift the PC board out of the tank and wash it lightly in the bucket of fresh water.

If the etching is not quite complete, replace the PC board and continue etching.

If etching is complete, drop the PC board into the water until you're finished cleaning up.

11. CAREFULLY lift the pump out of the tank, taking care to allow as much of the etchant as possible to drip INTO the tank.

Place the BOTTOM part (impeller) of the pump in the bucket of water. Plug in the pump and allow it to pump the water around in the bucket (and through the hose) for a while... until you're satisfied it's self-cleaned itself.

DO NOT allow the pump motor to come anywhere near the water. This should not be too difficult to do since the pump is about 10" high.

Unplug the pump. Remove it from the bucket of water and allow to air dry.

12. Remove the PC board support plate and toss it into the bucket of water.

Pour the etchant back into its original container.

Pour the bucket of water into the tank and use it to wash out any remaining etchant.

*** DONE ***

Actually, it's a LOT easier to DO than it is to describe.

Parting shots...

I found some PYREX (r) glass hot plate elements for a buck or so several years ago. I set one of them underneath my etching tank

with a SMALL amount of water (maybe a tablespoon) between the two glass plates to act as a heat conductor between the top of the heating element and the bottom of the tank. This allows my etchant to warm up to around 90-100 degress before I start etching. This step along cuts etching time to probably 30%-40% of the time required if the etchant were only room temperature. It's almost essential if you are using old ferric chloride! Any (safe) method of warming your etchant will be well worth the extra effort.

Ferric chloride reacts rather violently when it comes into contact with aluminum or concrete!! Exercise extreme caution any time you are etching. Ferric chloride not only etches copper, but it stains and can do harm to flesh if it's allowed to remain there to---

INTERNATIONAL RADIO AND COMPUTER, INC.
3804 South U.S. 1
Fort Pierce FL 34982
407-489-5609 (voice)
407-464-6386 (FAX)

As far as I know, Kenwood still uses 6-pole crystal filters, while both ICOM and YAESU use 8-pole filters. 8-pole filters give you steeper slopes in your received 'window' and generally better ultimate rejection of the out-of-band signals.

I have used IRI filters for many years. I find them to be superior to those offered by Kenwood!

IRI filters are often NOT of the "drop-in" type offered my Kenwood though. They may require you to do some wiring of them into the circuit. Often (and generally), this is nothing more than physically installing the filter (screqing it into place) and then bending a couple wires until they touch existing pins on the filter socket and then 'tack' soldering the wire to the pin.

In the majority of instances, the installation is NOT difficult and can be accomplished my most hams who can read the instructions and have the ability to (carefully) do some modest soldering of 6-8 connections.

If your Kenwood radio has the 'standard' Kenwood 2.4/2.7 kHz SSB filter at the 455 kHz filter position, and if you intend to replace the 455 kHz filter with one of better quailty, then you may find you have to do a bit more soldering and "installing" of the filters. Kenwood used to provide a 455 kHz SSB filter which was about 3/8" wide and 2" long. I assume that's the one they may still use. If you replace this filter with a better one (say, from IRI) the replacement filter will be about 3/4" wide and about 3" long, and will not fit into the space vacated by the original Kenwood filter. You may have to mount the filter external to the RF board and then use RG-174 (mini-coax) to connect it to the RF board. Again, this is not all that difficult, but it will require that you be able to follow printed instructions and handle a soldering iron in confined spaces. I just installed two IRI 400 Hz CW filters and two

IRI 2.1 kHz SSB filters in a TS-930S yesterday. The job took about two hours (including minor realignment).

The IRI filters are worth the investment in time and energy, BUT if you have any concerns about your abilities to follow directions or to solder, consider (FIRST) asking for help with the installation or buying the Kenwood filters (which require the sbility to read, but no technical experitise to install).

From: biekert@phoenix.phoenix.net
Message-ID: <3h2lil$kda@gryphon.phoenix.net>
Source record: 220558

Our club just purchased one of these controllers and I'm getting familiar with programming it. (or at least trying to)

Some questions for those of you who have one of these:

1) With the scheduler I'd like to be able to set a macro that would cause WEATHER ALERT to be issued every 15 min until turned off. All I can see is that I can make it happen every minute, or on a specific minute within the hour.... ideas?

2) Not sure what the concept of im-polite ID is?

3) Notice that after it IDs with my callsign it sends ID, but in tail tags I don't see that listed, see /R, WX, etc.... ??? Where does this come from, and if I pick WX can I get it back to ID?

Any comments, positive/negative about this controller. I did research on 7 different controllers and this one seemed to be the best in the price range we were looking at.

I am awaiting the audio delay board.. it's been redone, now digital, supposed to be shipped this week....

>the FCC and got the "Interference Handbook". I went over to my neighbor
>with the book and we had a chat. He is very agreeable and we are both
>trying to solve the problem together.

Well, while your interference problem is regrettable, I'm glad you have
the cooperation of your neighbor. That's unfortunately too rare. You
can enlist his aid in testing each of your changes. That'll speed up
resolving the problems enormously. The ARRL publishes an RFI Handbook
that's a lot more useful than what the FCC sends out. You might want
to get a copy of that. The basic problem is that consumer electronics
manufacturers won't spend the few cents per unit needed to prevent this
sort of interference. Having to do it yourself can involve a bit of cut
and try, but it should be possible to eliminate the problem.

>His setup includes: A Galaxy Turbo 11 meter radio , omni whip antenna
>(mounted on a tree ABOVE my house in altitude), an alternate directional 7
>element antenna (mounted on a 18ft stand EQUAL altitude to my home). He
>does not use a linear amp and has tried a cheapie low pass filter (but it
>made no difference). The whip antenna gives the worst interference in my
>home. The directional (depending on orientation) is better but still
>unacceptable. His radio has a ground strap.

None of this is out of the ordinary, and the fact that the directional
antenna helps in some directions indicates that the problem is not
harmonic related (the fact he's coming in on audio gear already indicated
that). Rather the problem is fundamental overload of your consumer
equipment. Since he isn't running excess power, that means your equipment
is extraordinarily sensitive to RF overload. That's sadly typical.

>1. Can anyone recommend things that I can do on my end to reduce my
>computer, TV, phone, stereo susceptibility?
>
>2. Can anyone recommend configuration changes or a good filter (please
>give $$, model and vendor phone if possible) for my neighbor's system?

A filter on his end won't help. He's not radiating *audio* signals, but your *audio* equipment is picking up his RF signals which it's not supposed to do. So the fix has to be at your end. If he were getting into your RF equipment, IE he comes in at only a specific spot, or spots, on your tuning dial, it *might* mean he needs a filter, but since it's phones, stereos, etc, the problem is RF rectification in *your* equipment, so the fix has to go there.

Ok, lets look at the phone first. The older Bell System phones were almost immune to RF interference, but the newer electronic phones are not. This is likely to be the hardest area to get good suppression. In some cases, a different brand phone may be needed. What's happening is that his signals are being picked up by your telephone wiring and conducted to the instruments. There it overloads the phone line protector diodes and is rectified into audio that you hear. Your job is to stop the ingress of the RF to the telephone circuitry. Sometimes just a common mode choke will work. You can make that by wrapping the telephone line, just before it enters the instrument, several times through a toroid. Radio Shack sells snap together chokes for this purpose. If the phone wiring in your house is unbalanced for some reason (poor contractor installation or third party add ons), then you may need to go further by bypassing differential mode signals. This involves inserting a RF choke in each lead and shunting a capacitor of about .001 uF across the line *directly at the phone* like so:

```
100 uH
-------x----))))))-----phone tip
phone |
line = .001 uF
|
-------x---))))))-----phone ring
100 uH
```

(tip and ring are the red and green wires)
(Parts available from Radio Shack)

That should get rid of the problem. However, some phones pick up enough energy on the handset cord to cause a problem. In that case, you need to put a .001 uF capacitor directly across the receiver and transmitter elements in the handset. All this may still not work with some electronic phones and modems. You may also have to treat the power cord coming from the wall cube on powered telephone devices, and in some cases the only thing to do is to go to another brand of instrument.

This treatment should also solve any modem problems you are having.

Now for stereos and your ProAudio system a slightly different cure is needed. For your stereo, the speaker wires are acting as antennas, picking up your neighbor's signals and feeding them back into the output stage of the stereo where they are being rectified. Often, a simple .001 uF capacitor across the stereo's speaker out terminals will solve this problem. If not, the circuit

shown above for phone lines will usually work. In stubborn cases, you may need to use shielded speaker wire, and ground the shield to a good Earth ground, *not to the stereo*, in order to finally get rid of the problem.

The stereo and ProAudio may also be picking up the signal on an *input* lead. All input leads should be shielded cables. If they aren't, change them. A common mode choke (the Radio Shack snap together toroids mentioned above) may also be needed. Simply wrap several turns of the offending cable through the choke and snap it closed. In the most stubborn cases, the differential mode filter noted above may also be needed. Don't neglect power lines, they may need the toroid treatment too. (*Don't* try the differential mode filter on power lines unless you *really* know what you are doing. You could be killed, or create a fire hazard.)

You *can* solve these problems. Having your neighbor willing to help is a major plus. Try a change then have him transmit. This will tell you what works and what doesn't very quickly. For input cable problems, try temporarily disconnecting cables to find the offender, then treat it as noted above. Sometimes it'll take a combination of things to solve a problem. Be persistant, they can be solved.

: can see is that I can make it happen every minute, or on a specific
: minute within the hour.... ideas?
Nothing off the top of my head... you may have to live with
4 different setpoints, each spaced 15 minutes around the clock.

: 2) Not sure what the concept of im-polite ID is?
The 7K tries to wait until a transmission is finished before
sending the ID. So it starts looking for an ID opportunity
before the ID time limit runs out. At some point it just
goes ahead and IDs on top of the transmission which is
called the "impolite" ID.

: 3) Notice that after it IDs with my callsign it sends ID, but in tail tags I don't see
: that listed, see /R, WX, etc.... ??? Where does this come from, and if
: I pick WX can I get it back to ID?
I am not sure what's going on here. The controller defaults to
"ID" as the ID. When you programmed your callsign in, this should
overwrite "ID".

: Any comments, positive/negative about this controller. I did research on 7 different
: controllers and this one seemed to be the best in the price range we were looking
: at.
Various groups in our area have used 7Ks on a bunch of repeaters.
They don't arrive quite as turn-key as some systems but the macro
capability allows you to program up just about anything. Also, the
hardware and software quality is solid...never had a controller
fail.

By the way, Bob at SCOM is really helpful on questions like these...
you may want to just give them a call.

990. HOAX against AmSoft

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-05 21:49:11 UTC
From: amsoft@epix.net
Message-ID: <3h3h4n$sev@grape.epix.net>
Source record: 220573
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.antenna,rec.radio.amateur.homebrew,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.space

I question if the person called bob@texas.net really exists or if it was just a HOAX and a campaign by a spineless internet hacker to damage the AmSoft reputation.

I submit the following information and request that you as an individual test the information for yourself.

On 2/5/95 I did a FINGER on bob@texas.net and received the following information:

>--- Host: texas.net User: bob@texas.net ---
>Login name: bob
>In real life: Robert J. Scott
>Directory: /home/b/bob
>Shell: /bin/menu
>Last login Fri Jan 20 20:39 on ttyrc from sa-pm1.texas.net
>No unread mail
>No Plan.

Take a look at the LAST LOGIN DATE!
(Last login Fri Jan 20 20:39 on ttyrc from sa-pm1.texas.net)
So how is it that bob@texas.net has managed to post so many messages in the rec.radio.amateur.* usenets as bob@texas.net since Jan 20 and texas.net's finger has no record of it?

Take a look how he connected thru TEXAS.NET ON JAN. 20, 95
(on ttyrc from sa-pm1.texas.net)
Is sa-pm1 a code for SPAM?

It looks like the wool has been pulled over our eyes on this story.
Even the FCC records for WY7O don't correspond to the Texas area.
Whoever you are pretending to be WY70 we are onto your HOAX.

FYI, AmSoft has not posted any reference to it's products since January 27th and will not post reference to AmSoft products in the future except for the rec.radio.swap usenet, and in the amsoft signature when responding to usenet messages.

To all readers of the rec.radio.amateur.* usenets AmSoft posts this public apology to anyone that became annoyed by any aspect of the continuing posts by or about AmSoft and its product.

I request that nobody post a response to this article unless they intend for their message to appear in all 7 rec.radio.amateur.* usenets (read header of this message first)

Sincerely,
Pete, KC3TL

The West Valley Amateur Radio Assn (WVARA) in San Jose, California is selling our Kenwood TS-830S HF radio.

The radio is in perfect/excelent operating condition. We are selling it because it is not practical for club station use, where many of our members are not able to operate such a complicated radio.

If you are interested in it, please e-mail me at twise@sparta.sjsu.edu for our asking price and more information.

Thanks,
Travis Wise KB8FOU

The West Valley Amateur Radio Assn, WVARA, in San Jose, CA is selling a
Kenwood TS-700 all mode VHF radio.

The radio does not work, but we are not interested in repairing it.

We are interested in selling it very inexpensively.

If you are interested, please contact me for more information.

Thanks,
Travis KB8FOU

Bob,
I clean missed the original "Spam" TM post but I sure
have been net clogged by you and others taking Pete to
task for his posts. The resultant is more like Spam 2-3
day after ingestion. Relax, let it go, get a hobby or perhaps
a life. Flame me if you like but why waste more bandwidth
on this nonsense. By the way I have no connection with
Amsoft or Pete other than I did buy a CDRom from them once.

Boy Pete, you really are a newbie without a clue as to how the net
works or how networks in general function, aren't you? Your whole
posting had me laughing. I hope your programming skills are better than
your understanding of networks, for your company's sake.

From: horrock@aol.com
Message-ID: <3h3s61$3ui@newsbf02.news.aol.com>
Source record: 220582

I have a Yaesu 767GX, I bought mine after using someone elses for
a month. Before I had the 767 I was using Kenwoods. I do have
the 6 meter module also.

One big difference between the Yaesu 767GX and say the Kenwood 950
is that the 767GX comes as a complete radio right out of the box. That is

to say there are NO EXTRA FILTERS to buy, where other radios of this class
have the quality filters as addon options. The 767GX a great running
radio.

Another thing is that the 767GX has been around for maybe five years.
It has been a soild part of the Yaesu line up.

However, I believe the 767GX is about to go out of production.
The linear AMP that goes with it (I don't have one and you really don't
need it) is already out of production, so it seems like the radio maybe
next.

I would say that for $1500 you got a fair price. You would be looking at
spending
more than that for a Kenwood with all the filters, or the next Yaesu HF
radio
in that class.

Don't get me wrong, ICOM's and Kenwoods are good radios too, but I am
STILL happy that I bought my 767GX three years ago.

out of production.

999. working current comparison of HTs (Th79A vs. FT-51R)?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-06 03:03:58 UTC
From: james@ccloa1.ccl.itri.org.tw
Message-ID: <james.3.2F35919E@ccloa1.ccl.itri.org.tw>
Source record: 220584

I got a Standard C160 and bought a Kenwood TH78A 1 years ago.
I really like TH78A except that its current comsumption during
receiving(60mA) is so big when compared with C160(30mA). This
always make me trouble when I want to transmit after a long-time
standing-by. I might buy a Kenwood TH79A or Yaesu FT-51R in the
near future. Is there any one know the current comsumption of these
two HTs during receiving?
Thanks a lot!

> at all?

I was mistaken - when I posted this message, I was going by what our club equipment coordinator reported to me, and he didn't realize the rig had a tube final. The radio is in perfect operating condition, it just requires a person with knowledge about operating a tube-type radio to run it. We are asking $500-$600 starting. Travis

: : that listed, see /R, WX, etc.... ??? Where does this come from, and if
: : I pick WX can I get it back to ID?
: I am not sure what's going on here. The controller defaults to
: "ID" as the ID. When you programmed your callsign in, this should
: overwrite "ID".

Just thought of something. There are two ways to implement the ID. One
is to program the "official" ID message, the other is to use a macro
that fires off when an ID is required. If you are using the
ID-triggered macro to do your callsign, the "real" ID message may still
be programmed to be "ID", which could be sent right after the macro is
done.
.
[If you did not use a macro to generate the ID, ignore this post.]

Per the manual for the TH-79A, the receiving current drain is as follows:
Dual band RX: approx 80 ma.
Single band RX: approx 45 ma.
With battery saver on: approx 20 ma.

With the standard battery that comes with the radio, I have had no trouble monitoring all day long. I wasn't transmitting much however.

Hello and thanks for reading. I have an Alinco dr-600t. This radio works great except for one problem. The manual says that you can remote control the radio from an ht fro eith 2m or 70cm. The radio will do this on 2m but not on 440. I sent the radio to alinco and they said they could find nothing wrong with it and when I got it back it still didn't remote on 440. I also tried a few different hts to make sure it wasn't my particular ht with the problem. Any help would be appreciated. Eith by packet or here. Please e-mail direct to my internet address where as I don't get to check this group very much. Tnx es 73 de Gary/WR1U

1017. HELP CHAN. ELEM. ALIGN MOTOROLA MITREK

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-06 20:42:40 UTC
From: sidener@crunch.nuc.umr.edu
Message-ID: <3h61k0$3a9@hptemp1.cc.umr.edu>
Source record: 220500

I am currently trying to tune a Motorola Mitrek radio to the ham band:

The radio is rated for (146-174Mhz)

It was tuned to 168Mhz.

I have successfully tuned the radio and channel element on the
transmit side to 145.290Mhz.

I am having a big problem getting the channel element (not radio)
on the recieve side to resonate at 144.690Mhz.

Motorola does not produce schemaitic of their channel elements
and I have been told that some components eg. caps. must be replaced
in the element to get it to resonate.

Motorola only has one model of channel element for that radio.
(KXN1088A) TX and (KXN1086B) RX

I was wandering if someone has a schematic or conversion chart pretaining
to the channel element alignment.

Obviously, something besides the crystal must be changed to have a range
of 146-174Mhz.

Any help would be greatly appreciated!!!

Thanks,

Scott Sidener N0WFL sidener@umr.edu

Unfortunately, I think you are mistaken as to which radio has the tube final.
The Kenwood TS-700 is all solid state. The TS-830 has a tube driver and
two tube final. I am also interested in the TS-700 drop me a note at
daleh@skypoint.com. Thanks

When you close both the dot and dash sides of the paddle the keyer sends dot, dash, dot, dash, etc., until you release. This feature allows you to send faster since you can hit the dot side of the paddle before a preceeding dash has completly been sent.

1023. Kenwood TH-79A loose antenna connector repair

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-07 02:37:54 UTC
From: olling@autodesk.com
Message-ID: <3h6me2$7qu@autodesk.autodesk.com>
Source record: 220506

Caveat/disclaimer: Don't blame me if you wreck your radio or void your warranty attempting any of this :-).

The combination of people on the radio telling me I was scratchier than usual and my noticing that my antenna was wobbling around inspired me to try to tighten up the antenna connector (BNC). Here's what I found...

I opened up the two halves of the case, as described in all the mod docs. Note that the screw under the mike/speaker jack cover is different from the others, and may require a different screwdriver (with thinner "blades"). Also note that there is a tongue-and-groove arrangement on both sides of the battery compartment that you'll need to pop open gently. As explained below, *don't* attempt to slide the two halves of the case apart to open it up.

Upon opening the case into its two halves, I found that the BNC is _not_ attached to the same half of the case that the circuit board is attached to, leading to the weirdness that I found below.

I found that there is a heavily tinned wire coming out of the BNC which has a right angle in it. It doesn't appear to be flexible at all, which is good, as you'll see below.

The weird thing is that the other end of this wire isn't soldered to the circuit board. If it was, you wouldn't be able to open the case without breaking the wire off of the circuit board :-(. Instead, apparently the wire just rests against a tiny(!) contact pad on the circuit board. Very(!) near to the contact pad is a equally tiny surface mount device of some kind, and the legs of an IC.

So imagine that you've got this (enormous, relatively speaking) wire finger sticking out and down from the back of the BNC connector, leading down to touch the surface of the circuit board, just between the tiny surface mount device and the IC legs. If that wire finger was able to wiggle the least little bit (we're talking <2mm here), it would intermittently short to either the neighboring surface mount device or to one of the IC's legs, rather than connect to the tiny contact pad that it's supposed to be touching :-(.

And the bad news is, if you let it get bad enough, this is exactly what happens when the antenna connector comes loose :-(:-(:-(. So hopefully now you'll be interested in reading about my experience in tightening it up :-).

Ok, so you've gingerly opened the case, and find the two halves are connected by a ribbon cable and 3 wires that are tied together. There's not quite enough slack in the cables to lay the halves of the case flat, so be careful you don't accidentally rip them out by the roots :-(.

You'll be able to see the bottoms (threads) of the two screws that hold down the antenna connector, but the heads are under a piece of plastic that surrounds the antenna connector and wraps around the top/back of the radio.

To remove this plastic, first remove the antenna from the radio, and throw it in the trash can (just kidding) :-). You'll see that the plastic is held down by a thin piece of foam rubber that's stuck to it and to one of the metal RF shields. Very gently peel the foam rubber off the plastic piece you're trying to remove. It's really easy to tear it, so work slowly.

Once you've got the foam rubber off, you can wiggle the plastic piece off, but you'll find that you need to remove the rubber O-ring from around the antenna connector first. Do that, then the plastic piece should come off easily, exposing the screws that need to be tightened.

Once you tighten the antenna connector screws, just reverse your procedure, and hopefully your radio will still work :-). Caveat: Remember the "wire finger" sticking out of the back of the antenna connector? Make d*mn sure that when you put the two halves of the case back together that you get them lined up perfectly (<2mm slop, remember?) before you try to do the final closure. Otherwise you risk getting that wire finger hung up on that tiny surface mount component or the IC's legs that I wrote about above.

Have fun, and let me know how it goes,
--

>Whoever you are pretending to be WY70 we are onto your HOAX.

OK Pete, you got me. I really don't exist. Or do I??!? Actually, when
I discovered how to travel through the space-time continuum using my
IC-765 and a Henry 5K Ultra to excite a subethereal space modulator, the
FCC gave me an extra class ticket out of sheer awe. Of course, since I am
now omnipresent in multiple temporal dimensions, the address from which I
operate isn't that important. yeah, that's it. Or maybe it's just that
the texas.net host had the wrong date/time. And of course, telnet might
be a valid explanation of how my whereabouts don't match my host location...
Tricky stuff! You are now deserving of the title "Junior Net Detective,"
provided, of course, you send in the correct number of boxtops...

You *were* joking, weren't you???!?

>
>FYI, AmSoft has not posted any reference to it's products since January
>27th and will not post reference to AmSoft products in the future except
>for the rec.radio.swap usenet, and in the amsoft signature when
>responding to usenet messages.

All joking aside, thanks for the consideration! I read .swap regularly and
don't especially mind seeing any ham radio related ads therein. That's
what the swap group is all about, no?

Well, I must leave to the other dimension now. 73, or as we say in the future, 72.9999999997. [Pentiums will be the standard soon]

I want to hear from those of you who have owned one of the current product line of ht's Alinco puts out. I know what you are thinking Alinco is junk and nobody in their right mind would buy one. I have heard that one more than once (but not from someone who ever bought one). I noticed most Hams are not open minded about radio gear if it isn't from the big three it is no good. I use to be that way about a lot of things. But of the last few years I started looking at the underdogs of life and have found I have ended up with some of the best deals of my life. SO I am trying to be open minded. If you have owned an Alinco let me know! I have my eye on the DJ-F1TH. Please E-mail replys, because I don't read this newsgroup very much.

Thank you all for your time

If My SB 220 is unused for a few months and I turn it on, it "pops"
the circuit breaker in the fuse panel. However the second time I
turn it on it's OK

I replaced the cheap relay and installed a Dow Key coax relay. I used
the spare contacts for the bypass in receive mode.

I think its a very nice radio. I had one in the early 80s with the remote VFO. Only widely known problem I heard of was the early ones had some relays go bad. Never had a problem with mine and neither did the guy I sold it to (he just sold it last year). It puts out a bit more power than most transceivers (150w). We used it on Field Day one year and the CW types loved it. Also the receiver handled the overloading from other nearby Field Day transmitters better than most.

I love my Alico DJ580, except for one thing.. It has horrible intermod. You might want to see if you can get your rig and return it easily if you are not happy with it. With any decent antenna on my radio I pick up every paging system in town at times, especially in the RF pool, downtown itself.

Other than that, it's a great rig.. If you're in a high intermod area, I suggest an Icom if you can. A friend has an Icom HT and says he's NEVER heard a peep from intermod. But try out the Alinco, mine works great.

Seeya..

I have a DEntron 160XV Transverter that I would like to sell. It takes 3.8 to 4.0 Mhz and converts it to
1.8 to 2.0 Mhz. It uses a 6146B and puts out 100 watts on the low band. It is in very nice condition and
I will ship it to you for $270.00. Please reply here of call 702-222-0442 in Las Vegas, NV
Thanks, Rich KD6VK

I have owned a DJ-580 for 2 years and the only problem I found with it
was a poor design in the outboard power connector which is soldered
directly to the main cicut board and in use found that the weight of the
connecter broke the plug loose. I now use a dummy battery instead and it
was a good solution. The rig other than that has worked very well. I
primarily leave it in my vehicle in homebrew mount and do not carry it
around much.

Erickson is a good place. I'd also recomend:

"The Ham Radio Toy Store"
117 West Wesley Street
Wheaton, IL 60187

FAX 708-690-9335
PH 708-668-9577

They stock most brands but Kenwood.

Another alternative is to drive the hour or two to Milwaukee and go to
AES, a very large store.

Which Icom? The 2AT is great, but some of the later models screech
and howl almost as bad as a Kenwood. (Nothing is quite as bad as
a Kenwood, of course.)

BTW on the subject of Alincos, I'm delighted with my 570 and 590.
They are fine values, not perfect mind you, but then neither are
the offerings from the big three. Even Motorola and GE radios will
squeal under some conditions, though those would be damn tough
conditions. The only second tier radios I'd avoid would be the
Azdens. I've never seen one of those that was comparable to any
of the other radios in its class.

AFAIK, e.g. DCF77 is AM-modulated to tell time of day, etc.. As long as one
doesn't want to use the carrier frequency itself (which is also very stable)
one can use the single side band mode of the receiver. Watch for abbreviations
like SSB, USB, LSB, CW or BFO. Of course if it is a simple receiver which
has only AM, sorry bad luck. Or if one is really daring add a e.g. 455kHz BFO
(beat frequency oscillator).
Standard Disclaimers apply (don't become a broadcaster)

Not sure on the order of progression, but I have an ICOM 2GAT (before or after the 2AT ?). I am very happy with it. Good audio (tnx and rec), no intermod (detected by me), and solid construction.

I had a Santec 144 up for years (until it "died"), had thought about a new Yaesu HT, but price lead me to the ICOM....no regrets.

As you will recall, I have been having problems with my neighbor's CB setup.

Thanks to all who have responded to my quest for knowledge on my CB interference problem with my home stereo, computer and phone equipment. It appears from the email I received below (much thanks too paidukas@huey.mis.semi.harris.com) that I may need to have another talk with my open and honest neighbor. Can anyone else provide details on the Galaxy Turbo unit below?

>For the record, the Galaxy Turbo CB base station you desribed is a 100 watt or
>better base radio. It is highly illegal. It has a built-in linear amplifier.
>CB's are only allowed 5 watts output maximum on CB!! If this person says he
>has no amplifier he is lying, remember it is bulit into this illegal radio.
>The Galaxy Turbo radio is built for other countries where this operation may
>be legal. Problem is that they are illegally imported into the U.S. and sold
>mail-order to CBers. I would have another talk with your neighbor...

1061. iambic keyers

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-08 00:41:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.9488.7583.0NFB9208@woodybbs.com>
Source record: 220534

ST>My question: what's iambic keying?

Iambic keying is a system by which alternate DIT and DAH memories retain
a paddle closure until the currently sending element is sent and then
the alternate element will be inserted immediately following the curren
element. For instance, if you hold the DAH paddle closed, the keyer
will generate continuous DAHS. If you hold the DIH paddle closed,
continuous DITs will be sent. If you hold BOTH paddles closed,
alternating DITs and DAHs will be generated. If you hold the DAH paddle
closed and then 'flick' the DIT paddle, a single DIT will be inserted in
the midst of a string of DAHs.

What this means to the operator is that, if he chooses to use this
facility to its utmost, he can generate CW characters with (slightly)
fewer finger manipulations than if iambic keying were not available.

A good example is the letter "C". Usually, this would require you to
make alternate paddle transitions between DAH-DIT-DAH and DIT once
again. With iambic keying (and REALLY good dexterity) the operator
would HOLD the DAH paddle and flick-in a DIT at the right time, which is
WHILE the preceding DAH is being sent.

I use an iambic keyer, but I have chosen to not use all of the virtues
of the iambic logic. I do, periodically, use the DIT-DAH insertion
feature, but for the most part, I use it as a 'normal' keyer. I do this
so I won't become too dependent on the iambic features and then fall
flat on my face if I had to use a non-iambic keyer sometime.

Hope this helps... you'll probably get other, better, explanations.
Just though I'd add my two cents worth.

I own an Alinco DJ-580, a 560 and two DR-590's. I think that they are the best value out there. I am especially impressed with the value and usability of the DJ-580T. Remember that a lot of ham's feel that their FCC license also grants them the right to be obnoxious idiots!

I've had an Alinco F1JT for a long time now. Have gotten nothing but good reports of sound quality and clarity. I use it in the car as a mobile connected to a roof antenna and get very good coverage with 5W. I use it as an HT from my easy chair with an AEA antenna to take part in nets as well as simplex operation.

I bought the unit used via rec.radio.swap and have never had any problems with it so far -- except that I still don't know how to program all the functions. Continuously have to look up the instructions which aren't nearly as good as I would like.

Dennis,

A land Mobile radio must pass stringent testing by a FCC authorized lab.
One of the things a land mobile radio is NOT allowed to have is frequency
agility from the front panel of the radio. The end user is not allowed
to program frequencies of choice. A Land Mobile user is assigned frequencies
to operate on, by a frequency coordinator, he can not just go to a quiet frequency.
Also transmitter frequency stability is tested. The amateur radio only must pass FCC
Part 15 regulations if it has a receiver operating above 30 MHz. No
transmitter testing is done to an amateur radio. The transmitter only
must adhere to the rules in Part 97. For equipment operating below 30
MHz no testing period is done, a company only need to have it's linear amplifiers
type accepted to show they do not operate on the 27 / 28 MHz range. The
price tag for FCC testing is about $ 10,000 to 15,000 for a product.

The 2GAT is a later, and tougher, radio than the 2AT. It's an excellent radio as you know. However, it's a big honker (like the 2AT). The little micro-Icoms suck almost as much as the other micro-HTs.

>
>Please respond to these questions:
>
>Your most favorite antenna (easiest to install) Is:

A center fed doublet, 105 feet, fed with ladder line via a tuner.
Usually installed as an inverted Vee. It'll tune up fine on 75,
40, and 20 meters.

>The antenna that can go on FD, and makes the most contacts (harder to
>install) IS:

Stacked monobanders for 80 through 10 on a 120 foot rotating tower.
Well it *is* harder to install. :-)

Seriously, if you're intending to do much work on 20 and 15, a beam
can be a help. However, a beam can hurt too. It takes too long to
swing, and you want to work out a frequency as quickly as possible,
so directional antennas are often a hinderance. This depends on
your location with respect to the peak amateur activity on the
continent, and the propagation at the moment, of course. If you
live on the edge of the continent, a semi-fixed beam can be a
help. You might want to think about a 40 meter curtain or Vee
beam.

>Your favorite HF rig:

IC-735. Can run off battery power in a pinch. Adequate power, marvelous
thermal design, and excellent receiver.

>The one that made the most contacts:

Drake Twins, T4X and R4C. Hey, hard to beat the old workhorses.

>Your favorite band: Most contacts made on:

Not that simple. 40 meters is the basic band for the entire
weekend, but 75 meters is great at night. 20 and 15 are sometimes
productive in the daytime, but FD is mostly a domestic contest,
so 75 and 40 are the basic bands of interest. If you put out a
decent signal, camp on a frequency until you run it dry, then
move on. You'll run a lot more contacts using SSB than CW.

>Your favorite antenna tunner:

Johnson Viking Matchbox.

>favorite power source: (AC gen, Battery, solar or other)

Generator, diesel, 15 kW, trailer mounted. Green power will win you
some extra points, but the generator gives plenty of power for the
whole contest. Besides running the station, lights, computers, and
refrigerator, a good generator will also run a window air conditioner
for your operating shelter. A miliary radio shelter on a deuce and
a half is fine, but one of the local groups operates out of a converted
refrigerated semi-trailer rig. Lots of room in there. Of course you
can use a tent, just make sure it has good netting to keep the
mosquitoes off of you.

>In a recent thread it was said that Amatuer Radios are not "Type
>Accepted" for land mobile operation (frequencies?). What does this
>mean.

Type Acceptance is a procedure the FCC requires for manufactured transmitting equipment used in most services other than amateur. Production samples used to have to be submitted to the FCC lab to make sure that they complied with all the Type Acceptance standards. Today, the FCC staff can't handle the testing load, so the samples have to go to an FCC approved testing facility. They test all the usual things such as spectral purity and stability, and also things that are specific to the particular service, such as land mobile equipment not being capable of being user programmed to any frequency other than the ones for which they are licensed. They'll forward their report to the FCC, and if it is favorable, the equipment will be issued a Type Acceptance number that has to appear on all production units.

This is a more stringent requirement than the Type Certification process that most equipment has to also pass. This consists of a a manufacturer certifying that his production equipment meets all the applicable FCC regulations. That's basically just a paperwork exercise, though the FCC has been known to run random checks to make sure the certification is valid.

>Also, out of curiosity, if I join CAP or MARS, who do I get to modify my
>Yaesu FT-530 without voiding my warranty? HRO, AES, Yaesu, anyone else?

As a MARS/CAP operator, you're assumed to be competent to modify your *own* equipment. Most manufacturers of amateur equipment understand this, and offer explicit instructions for doing the modifications. If you follow their instructions, you won't void the warranty. (If you screw it up, you will void the warranty, but Real Hams (tm) don't care about no stinkin' warranty.)

1088. FT-530 clicking

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-08 15:55:45 UTC
From: kgk@nwu.edu
Message-ID: <kgk-0802950955450001@kgkmac.repoc.nwu.edu>
Source record: 220398

On occasion my Yaesu 530 clicks when in the scanning mode. Others have noted the same, so at a local ham fest, I asked the Yaesu rep. about this. He said they were aware of the problem and it's some kind of internal grounding problem. They have a fix for it, but needs to be done at the factory. He said their was no charge for it, even if it's out of warranty.

So if anyone has this problem, you can call the factory and have them repair it (and double check to be sure it's free if your out of warranty). The only problem he indicated was that they were currently backlogged and figured they would catch up around the begining of March.

>shielded RCA to RCA stereo cables? Mail-order ok.

>thanks,
>dmassarik@aol.com

A few months back I worked on a similar problem for one of my co-workers.
We tried the telephone line filters, rf chokes inside the phones and where
the lines came into the house, bypass caps and other remedies.

Many of these gave some results but nothing seemed to reduce the interference
to an acceptable level until ....

When I opened up one of his phones I noticed that the traces on the pcboard
went from the connector about 3/4ths of the way around to the transformer.
The interference went away completely when I unplugged this phone.

It was the phone itself picking up and rectifying the signal and feeding
it back over the house wiring.

Therefore, my suggestion is to try unplugging your phones one at a time
to see if it makes any difference.

Hi all,
Has anyone seen information on this? The schematic has the extra contact on the mike connector as "Clone". I believe this is the bi-directional port for the remote mike too. I'm going to investigate this "feature" starting with information from the Ft5100. It should make an interesting project.

Radio Shack sells a cheap 2M/70CM SWR/Power meter. You asked for cheap-
You get what you pay for. I've got the Rat shack meter and it works
great on 2m, however it reads the line loss on 440 as reflected power on
SWR. I found the only way ot read SWR's on 70cm is to reverse the power
meter and measure the actual reflected power and apply that and the
forward power to the SWR formula. It's the most acurrate reading I can
get on any meter.

Todd-

This is the kind of problem ham repeaters deal with all to often.

The spectrum analyzer should be entertaining. Probably look like very long grass with some big trees on the display. A field strength meter would probably tell you that you've got problems. If you've got RF mixing or overload problems, they could be affecting the transmitter as well as the receiver. One suggestion is to put in a set of filter cavities between you and the antenna. You didn't say if tx and rx were on the same frequency. A good set of cavities will only pass the frequencies you're interested in, and block the rest. I assume that inside the box your equipment is totally shielded. You should be using the highest quality and best shielded cable you can afford both inside your box and from the box through the wall of the enclosure out to the antenna. Heliax wouldn't be overkill.

You want your box to be a solid shield, with every line going in or out shielded and filtered. Lines inside your box should be shielded as well.

Let us know what you find out, and what works-

Greetings,

I have a KWS-1 transmitter I am restoring. The multimeter
is sticking. I have tried without success to fix it.
Anyone have a spare Collins meter that has a 1MA 50 ohm
movement, with back lighting capability, and the same
case size as a Simpson 227? The front panel bezel is
square, and is 2 and 3/8" high and wide.
The Collins 75A1 thru 4 meters will work. Perhaps the
32s transmitter meter may also work.

Please E-mail or call evenings at 513-683-2676.

Thanks, Jack

>micro-Icoms suck almost as much as the other micro-HTs.

Gary,

Have no experience with the micro-HTs but thanks for your post. I appreciate
it.

The only criticism I have about it (and this is very picky) is the lack of a
battery power meter or some way of telling you the status of the battery pack.
I can listen for "flutter" on receive, but this may also be your location.
The true test that your battery is dead is when it does not transmit anymore
:-).

Well, all in all it (IC-2GAT) is a great HT (have not dropped it yet to see
how tough it is :-)).

From: gh@hopper.unh.edu
Message-ID: <3hbh5b$ldo@mozz.unh.edu>
Source record: 220476

Hi and thanks for reading. I have an Alinco dr-600t dual band mobile and it works great except for one problem. The manual says that you can remote control the radio from an ht on either 2m or 440. The radio will remote on 2m but not on 440. I sent the radio to alinco service and they said they couldn't find anything wrong. When I got the radio back the same thing happened. I have also tried some other hams hts on 440 and they didn't work either so I know that it's not my handie. Any help would be appreciated. Please send responses by e-mail where as I don't get to check this group very often. Tnx es 73 de Gary/WR1U .

1108. Repeater Installation help...

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-09 00:33:28 UTC
From: lawson@ecst.csuchico.edu
Message-ID: <3hbnso$cvq@charnel.ecst.CSUChico.EDU>
Source record: 220473

This is a rather long winded problem, so read at your own boredom risk..

Hi everyone,

I'm a design engineer at a company here in Sunnyvale. We have a situation here we are trying to remedy and I decided to post here to see if anyone had any suggestions. We have an installation in the San Diego area which uses 2 data repeaters on San Clemente island, 2 more repeaters on an inland mountain @ 6500' 60 miles east of San Diego, and a master unit located in San Diego. We operate at approximately 350 MHz transmitting digital data via FSK and a time slicing protocol. Basically we can monitor up to about 30 data gatherers in the field and every second have all 30 report there data in their time slice. The transmission mode is FM. The repeater on the mountain is giving us some problems. We believe part of the problem is the cold temperatures on the mountain, (it was snowing up there two weeks ago) and the other RF units on the mountain. This site is like any other repeater site, there are multiple repeaters, cellular repeaters, pager repeaters, military stuff, and who knows what else. All our equipment is located in a metal storage box about 10' wide by 10' high by 40' deep. (Everyone is in the box). There are 3 towers with about 30-40 different antennas @ 20' to ~120' up. We are using the egg-beater type antenna (I forget the name, it's in all the catalogs) with an omni directional horizontal pattern and a right hand circular vertical pattern. We aren't located extremely near any other antennas (we stick out about 5 feet from the tower and 5 feet above or below the nearest antenna). Our problem is that because of the nature of the data transmission mode, ie a 20 ms blip once a second, it is hard to test the signals coming in and also going out. We can put the transm-itter in constant transmit mode for testing purposes, but that does not emulate actual working environment conditions. About the only way to test the system is to whether we got the data or not. Yes or No. It is hard to tell if we are reading strong signals from the Island or if we are just picking them up enough to get the data.

I'm sorry this is long winded, but I wanted to give the background. Now the question: Does anyone have any suggestions on how to isolate our system from RF interference, power interference etc. Lately, the system has been flakey, receiving up to 50% of the sent data transmissions. Get one, miss one, get 2, miss 3, etc. We were thinking that the harsh RF environment is overloading our receiver front ends and/or clashing with our output transmitter. We are trying to isolate ourselves from the rest of the radios up there.

Currently we are plugged into
the 120v power outlets in the box and using the same ground system as

everyone else.
We are planning to install a line conditioner, and try to isolate our ground
from the common ground the rest of the repeaters are using. We are also
going to take a spectrum analyzer up there and look at the RF input to
our radios.

I appreciate any cooperation and will let you all know about our progress.

Thanks,
Todd

P.S. Sorry about the messed up paragraphs, I hate vi.

>

The mods are the same on the 592 as they are on the 599 and 600. The
problem is that the AM detector and the 800 MHz circuits are not included
in the DR-592.

You can perform the same mods, it will display frequencies as though the
cicrcuits are there, but nothing will be received.

Message-ID: <3hbv9t$44vi@usenetp1.news.prodigy.com>
Source record: 220479

Does anybody else get weather maps via the internet or thru the Navy's radiofax? I've been looking at them for years and finally found a book that describes how to read all the weather charts. Did anybody else get a copy?

Anyway, it's called, "WEATHER MAPS - How to Read and Interpret all the Basic Weather Charts", and describes what all the surface and upper-level charts are all about, what thelines mean, how to make forecasts using them, etc. It's pretty good.

It costs $29 from Chaston Scientific, Inc.
P.O. Box 758
Kearney, MO 64060

If anybody else has gotten ahold of it, I'd like to know your impressions of this new book. I know that I've looked for years for a book describing weather maps.

That's all.

1112. Why does Variac trip breaker?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-09 05:19:38 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1995Feb9.051938.17345@VFL.Paramax.COM>
Source record: 220407
Cross-posted to: rec.radio.amateur.equipment,sci.electronics

Recently purchased a used Variac autotransformer.
The unit is labeled :

TYPE W20M AUTOTRANSFORMER
VARIAC (r)
General Radio Company

Line 115V 50-60 cycles Load 0-135V 20 amps.

The whole thing is in a nice self-contained box with an AC input plug on the side and a duplex AC output on the top. Has an ON/OFF switch, a neon pilot lamp, and a 20 amp fuse.

It looks to be in great shape but it blows my 20 amp breaker when I plug it in... and turn it on. The neon pilot lamp just barely blinks on for a split second before the breaker trips. The 20 amp fuse in the Variac box does *not* blow (?) I opened up the box and everything appears to be just fine inside. No signs of anything burnt, etc. The windings are nice enamel/copper colored.

Now.. for the strange part... If I connect it to a 110V isolation transformer, it appears to work OK, however, there is pretty good sized spark when I make the final connection between the transformer and the Variac (with the power on) and the Variac makes a momentary hum/buzz sound as if there is a fairly high inrush current as power is applied but then it just sits there quitely working perfectly. I put an AC ammeter inline between the isolation transformer and the Variac and it was reading practically no current being drawn with only a 40 watt light bulb load on the Variac. It sat like that for a while. Nothing got hot. Everything seemed perfect. Yet, when I plug it straight into the wall it trips the breaker for the line. There is nothing else on the 20 amp circuit.

The Variac box has a 3-wire plug and the ground only goes from the input to the output. My ohmmeter shows infinite from either side of the line to the ground. It reads about 0.2 ohms across the line.. which I guess seems about right, given the size of the Variac windings.

Is it possible that a 20 amp Variac has sufficient initial inrush current when first connected that it will trip a 20 amp breaker... but then why doesn't the little 20 amp fuse inside the Variac blow?

Any ideas what the problem is? From the looks of this thing, it is hard to imagine that there is anything actually "wrong" with it.

1115. SM 220 station monitor questions

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-09 07:01:09 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9502082300.aa24560@paris.ics.uci.edu>
Source record: 220486

Hello All:

I just came by an SM 220 station monitor (scope) by Kenwood.
It has the BS 8 panadaptor installed.

I have the Kenwood TS 440, and will have the Kenwood TS 940 (as soon
as Kenwood is done fixing it!), but I notice that the SM220 manual
has instructions for the 520 / 830 series radios. Anyone using
this scope with the 440 or 940? The BS 8 is for the 8.8 Mhz IF
which the 440 and 940 have in their IF chain.

Any general info?

Clark

1118. Re: Why does Variac trip breaker?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-09 08:02:23 UTC
From: ajansen@jkmicro.DIALix.oz.au
Message-ID: <28@jkmicro.DIALix.oz.au>
Source record: 220487
Cross-posted to: rec.radio.amateur.equipment,sci.electronics

The variac takes significant inrush current while magnetising its
core forthe first half-cycle. The circuit breaker, being a fast
device, trips out on the surge, whereas the fuse has to heat up
first, even a few millisec overcurrent will trip the breaker, but
not blow the fuse. You need a delayed action breaker.

When you put an isolation transformer in the way, the transformer
limits the inrush current, so the breaker doesnt trip - simple !

So, unless your very unlucky, theres nothing wrong with it..

>Is it possible that a 20 amp Variac has sufficient initial inrush

1119. <ad> GUARANTEED CREDIT REPAIR BY LAW FIRM

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-09 10:47:09 UTC
From: ccapc@cyber.sell.com
Message-ID: <3hcrrd$o78@panix.com>
Source record: 220488

Consumer Credit Advocates, PC
11 Pennsylvania Plaza, Suite 2101
New York, NY 10001
(212) 629-5261 (telephone) (212) 629-4762 (fax)
E-MAIL: ccapc@cyber.sell.com

Our LAW FIRM offers direct guaranteed effective credit restoration services by experienced attorneys. THIS IS NOT A DO-IT-YOURSELF KIT.

What can we do?

We have successfully facilitated the removal of Late Payments, Charge-offs, Foreclosures, Repossessions, Collection Accounts, Loan Defaults, Tax Liens, Judgments and Bankruptcies from our clients' credit reports. WE GUARANTEE THAT YOUR CREDIT CAN BE RESTORED!!!

Who needs our services?

Anyone who has experienced the inconvenience and embarrassment of being turned down for a credit card, a lease or a purchase of an automobile.

Anyone who is unable to buy the house of their dreams due to denial of a mortgage application or who has to pay thousands of dollars more in mortgage interest than someone with good credit.

Anyone who has been turned down for a job or promotion due to derogatory credit items on a credit report.

Anyone in business who has lost a deal because a person or firm wanted to see his/her credit report before doing business.

Anyone who has been unable to establish credit.

THE FOUR GREAT MYTHS OF CREDIT:

Myth #1: It is illegal or immoral to have your credit report cleared.

Fact: It is not illegal nor immoral. In fact, that is what the Fair Credit Reporting Act is all about. The act was enacted by Congress in 1971. One of its purposes as to give consumers the protection of the law and to help guard against

any unwarranted invasion of a consumer's right to privacy.

Myth #2: The information on a credit report cannot be changed.

Fact: Actually, the opposite is true under the Fair Credit Reporting Act. Federal and State laws require that items be removed if they are not 100% accurate or cannot be verified in a timely manner.

Myth #3: It is impossible to get a bankruptcy off a credit report.

Fact: Bankruptcies can come off credit reports like any other derogatory item. The nature of the derogatory item has nothing to do with its removal under the Fair Credit Reporting Act.

Myth #4: Credit Reporting Agencies are empowered with some kind of governmental authority.

Fact: Absolutely Not!! They are simply large corporations whose primary goal is to make a profit like any other business.

If you have ever applied for or received credit, a file exists in one or more of the credit bureaus. These companies collect, store and distribute as much credit information as they can find, retaining negative information on a credit report for 7 to 10 years. This information is evaluated by potential creditors to determine your credit worthiness.

Credit reporting agencies are in business to protect the interests of the creditors. the LAW FIRM's goal is to help and protect the individual consumer from inaccurate credit reporting.

The president of our LAW FIRM has been practicing consumer law since 1984. The staff of our firm has successfully processed, disputed and challenged thousands of client credit reports.

Our legal fee is based o the number of negative items that appear on a client's credit reports, issued b the three national credit bureaus. Our retainer agreement offers a MONEY BACK GUARANTEE stating that if any negative item is not deleted, upgraded or corrected from a client's credit file, it will give the client a full refund for that item or continue to process the client's file at no additional fee until that item is

corrected, upgraded or deleted. THE ONLY THING YOU HAVE TO LOSE IS YOUR BAD CREDIT!!

PLEASE CONTACT THE LAW FIRM AND LEAVE YOUR FULL NAME, MAILING ADDRESS AND TELEPHONE NUMBER SO WE MAY FORWARD FURTHER INFORMATION AND INSTRUCTIONS TO YOU ABOUT OUR SERVICE.

1125. YAESU FT101 PROBLEM

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-09 14:33:37 UTC
From: ddepew@CHM.TEC.SC.US
Message-ID: <3hd941$jpm@ns.sunbelt.net>
Source record: 220406

Help!

I'm having a problem with my Yaesu FT101-E. Before I send it off to Yaesu for repairs, I thought somebody on the net might have had the same problem and be able to help me out.

The problem is this. When I'm transmitting CW, my frequency jumps around like crazy...sometimes an "up and down" jump, other times a steady drift. I've cleaned the potentiometer that controls oscillator voltage (someone suggested that might be the culprit). Reports of the problem are somewhat sporadic, but I think that's a function of the receiving station's CW filter rather than my xmtr.

I can replace components, but I have very limited test equipment (i.e., a DMM - no scope, etc.)

Any suggestions would be appreciated. Tnx es 73,

Dorr Depew
N4QIX

e-mail responses please.

>
>Clark
>WA3JPG
>
I am using a TS-440w/AT with an SM-220.

The BS-8 requires the 8.8 MHz IF be picked up from a point that is
before any of the narrow IF filters. Further, it is desirable to avoid
having signals from the BS-8 marker generator appear in the TS-440
audio output.

To achieve this and make the IF available at the unused
RCA jack on the rear of the TS-440, perform the following:
1)Remove the upper and lower covers from the 440.
2)Remove the antenna tuner, if installed.
3)Remove the mounting screws for the RCA jacks.
4)With solder, bridge the ground path on the unused jack
to the adjacent ground for the next jack.
5)Connect a one foot length of RG-174 coax to the unused jack.
6)Reinstall the RCA jacks and antenna tuner, routing the coax
to the lower circuit board.
7)Connect the center conductor of the coax to a 22 pfd.
ceramic cap and the other side of the cap to the output
of the buffer amp input stage in the noise blanker.
8)Connect the shield of the coax to the shield can adjacent
to the buffer stage.
9)Reinstall the upper and lower covers.

This is the kind of thing one makes up oneself except for short lengths of the
RCA to RCA, which local stereo stores usually have. For the large speaker cables, one would have to buy the shielding seperately and slip it over the cables, as shielded wire is usually a small wire size inside.
Carter, W1TCD, <cpp@tiac.net>. Usually it is the amplifier inputs that cause trouble, not ther speaker leads. Try just the inputs first, where a semiconductor acts as a detector/rectifier, and there is gain to amlify the weak signal pickup.

1139. Azden 6 Meter HT Info Wanted--

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-10 03:51:29 UTC
From: leigh@rain.org
Message-ID: <3hens1$lmt@news.rain.org>
Source record: 220418

Today I bought an used Azden AZ-62 HT in good shape. Included in the _$100_ sale price were two battery packs and a speaker-mic.

Programming is downright strange and tricky, but the radio seems well-made. The previous owner told me it had a nasty habit of dumping memories when a nearly dead nicad pack was left on it for several days.

Are there any 6 meter extended HT antennas made? A 50 mHz "rubber duck" just can't be very effective.

Are there any extended transmit/recieve mods available?

>If you enable the Battery Save Mode (<F1> for 1 secons, then <MR>), you
>will cut your RX current drain to 10mA (single band) and 20mA (dual
>band). In that mode, I can run my TH78A for a LOOOOONG time before the
>battery runs down.

Thanks for your message. I know the Battery save mode and had been using it all the time. TH-78A will switch from save mode to receive mode when it receive any signal on your stanby channel. This will immediately increase the current to 60mA. I used to working on a busy channel and this is why the TH-78A is almost always working on receiving mode.

I opened the channel element up and added about 6-8 turns to the inductor that tunes the frequency - with that change I was barely able to get it tuned up for rx on 144.99 mhz.

Good Luck and 73's de Dave, kd6pro

Anybody seen a price quote on this thingy? I have a 202 and like it.
If the 212 (?) is as durable as the 202, I think it'll make a good mobile rig.
That is, if the price is competitive.

73's, Jim N9ZQA

Source record: 220441

I have one. Its probably my fifth HH and my primary portable now.
I would recommend it.

Some good features.

Reasonably ergonomic. Most features can be learned and used without
reref to the manual.

VERY hot RX.

Reasonable out of band sensitivity.

Battery life is excellent.

Quality radio, well built and solid. Excellent reliability reports.

Some poor features:

Used as a mobile with an external antenna expect a lot of front end
overload and intermod. This problem is bad in the ham band and really
bad in extended RX.

Accessories are expensive, but prob in line with other brands.

Internal speaker is just acceptable. I use the larger SP/Mic most
of the time.

Audio output (volume) is just acceptable for mobile use. With the
windows down expect to have to hold the radio close to hear it.
Easy to miss calls. Note: This is a problem with most HH's and a
good reason to consider a real mobile radio.

The radio is no where close to waterproof. Several around here
(OK no Seattle jokes) have been trashed due to rain. If it does
get wet, very quickly remove the battery, and as soon as possible
split the case so it can dry out.

1149. IC2340H att modification.

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-10 13:00:51 UTC
From: 4z4zq@pc.4z7aba.ampr.ORG
Message-ID: <65044@pc.4z7aba.ampr.org>
Source record: 220427

u 2340.mod
Hi guys,
this text deals with ICOM's Mobile radio IC2340H.
on some of icom dual band mobile transceivers there is an RF attenuator
which attenuate the received signal by 20dB.
in my opinion this is a great feature especially when you operate in cities
or in area's with lot of RF signals, repeater, etc.
the attenuator function reduce the intermodulations that appears while
receiving in those areas, and let you listen more quietly on your favorite
channel, when you listen to a local repeater you can hardly feel the
20dB attenuator, but the intermodulations almost disappear.
the problem is that the attenuator was featured on old icom mobile rigs
(such as IC2340H, IC3230H), but not on the IC2340H.
the next lines will guide you how to add this feature.
all you need is 2 1p2t small switch, and 2 12Kohms resistors.

VHF MODIFICATION
1. open the upper cover of the transceiver.
2. locate D9 on the print (left to the Power Amplifier while looking from the
front of the transceiver)
3. solder a 12K resistor to the anode of D9 as close as possible to the diode,
(with no wire, the pin of the resistor should be soldered to the pin
of the diode)
4. the other side of the resistor should be wired to the small switch
(the switch can be mounted on the back of the transceiver, there's an hole
in the heatsink which you can use to insert the wires to the transceiver.
5. the other side of the switch should be tied to 5V
(you can find a 5V terminal at J2 pin 2, j2 & j1 located near the vco
at the front of the print it is a 2*4pin sip connector, j2 is closer to
the vco.

UHF MODIFICATION
1. open the lower cover of the transceiver.
2. locate D17 on the board (this diode is wired under the board, just beside
L22. there are 2 holes, I am talking about the one located closer to the
antenna)
3. solder another 12K resistor in the same way it was done in the vhf to
the anode of D17 just under the print (the anode is the left pin of
the diode ,the pin which located closer to the power amplifier.
4. the other side of the resistor should be wired to the other small switch...
5. the other side of the switch should be tied to 5V
(for example to the right pin of the regulator IC7)

Explanation
when you turn this switch to on it turn the diodes on, and attenuate

the received signal.

This modification was tested,
but you will do it on your own risk.

Good Luck
Aviad, 4X6TL.

Hello all,
I have a Kenwood TS-790 all mode transciever.
A couple of friends of mine that also have this rig
have encountered a very strange problem in the VHF part
of the rig.
The symptom is as follows:
When you transmit on VHF the power reading starts to oscillate
randomally.
The result of this is that one of the switching PIN diodes breaks
down and the transmitter doesnt work .
please note , that on all three rigs that this ouccured on the
antenna SWR was carefully monitored and was below 1:1.3 .
Local Kenwood representatives didnt have a cure except replacing
the PIN diode.
ON two of the three rigs it happened again.
Does anyone know of this ?
Is it a design bug ?
I would be happy to recieve any replies that concern this rig.
Maybe Kenwood Representatives also read this?
Thanks, Assi

Note to no-spam flamers: I love you, too.
Note: Already posted to BOATANCHORS list.

TRADE/SWAP LIST
I have the following items (BA and non-BA)
available for trade. I would prefer
trade over selling.

Non-BA:
Two 4 MEG 72-pin SIMM RAM.
Working pulls from a DELL 486D66.

U.S. Robotics 14.4 external fax
modem w/ manuals.

MFJ-207 HF SWR Analyzer
with manual. Makes antenna
work a breeze!

BA:
Black wrinkle finish 3.5-7.3 Mhz
National HRO coil set. Cosmetically
restored to EXCELLENT. The original
tuning chart and cover are disintegrating
with age and I have replaced them with
good reproductions. The original chart
and cover are included. Please note:
I have no way of checking this set
electrically, but it looks good.

BC-348-K project. Less dynamotor,
antenna connector and dial light pot
(of course!) but otherwise complete.
Needs cosmetic work and filiment
work, but this is no "parter" or
basket-case unit. A real good BA
project for a classic rig very
much in demand.
Reproduction manual included.

BC-221-M Frequency Meter.
Unmodified original. The unit
used to put your BC-610, ART-13,
ARC-5 and other rigs on frequency
and to monitor your AM transmission
quality. No WW2-era station is

complete without one. Cosmetically
restored to EXCELLENT. Spare tubes
and Bristo wrenches are in the Spare
Parts compartment.
Electrically works FB.
Tuning book and repro manual
included, of course.

Hallicrafters S-38 (no suffix). Electrically
works FB. Recently aligned.
Paint scuffed at corners and bandspread
dial needs touch-up, but all
lettering good. Original/no mods.
Red slide switchs present and work FB.
Reproduction manual included.

Numerous common ARC-5 transmitters
in varying conditions.

Gibson-Girl waterproof canvas bag.
The bag the famous unit came in.
Including parachute cord lanyard.
Good, needs a little cleaning.

Hi,

It's advertised that the W9xt (IBM PC card) works with major contest
and logging software. It does both Voice keying and CW keying.

Does the CW keyer use the NA/CT type com port setup by being com3,4 etc..?

Does it work with CT, NA, WR9R or Hyperlog?

Dang, you can finance those things now? I had to pay cash for mine!

Then, of course, there's the side benefits of making your own the
old-fashioned way - Jeff Herman can tell you about that. No, wait,
Jeff knows about making CW transmitters, not babies.....

See, that Morse does too displace important information in your brain.

1158. Bel 645 STI Radar Detector

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-10 17:12:02 UTC
From: retzer@alpha2.csd.uwm.edu
Message-ID: <3hg6p2$mvl@uwm.edu>
Source record: 220431

I was wondering if anyone could give me some info on the Bel 645 STI radar detector. It has all the features I would like to have but is a bit pricey ($329.00 at a local electronics outlet). Is there a mailorder place that carries this type of item, possibly at discount prices? I've also noticed a detector from Radio Shack which has the same features (not to mention the fact that it looks exactly like the Bel) as the Bel. Its item 22-1653 on page 164 of the 1995 catalog. The only difference I can note is the price (the RS detector sells for $269.99. Is this a Bel Detector with the RS logo on it?

Any Advice would be appreciated,

Many Thanks,

Joe Retzer

1165. Alinco HT's - antenna connectors

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-10 21:08:42 UTC
From: Dick Harper <dharper@kumc.wpo.ukans.edu>
Message-ID: <1995Feb10.150842.85040@kuhub.cc.ukans.edu>
Source record: 220359
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

A friend of mine ask me to post this in hopes it would benefit current and future owners of Alinco HT's:

February 9, 1993

ARRL (Hints and Kinks Column)
225 Main Street
Newington, CT 06111

Gentlemen:

An acquaintance with a fairly new (less than six months old) Alinco DJ-580T Dualband, handheld transceiver was becoming extremely noisy into the local UHF repeater from areas where he should have had a noise quieting signal.
Suspecting a problem in his newly installed dualband roof-mounted antenna, I told him to stop by the house for some testing with my Bird wattmeter.
After a somewhat frustrating half-hour of tests, I finally tracked the problem down to the BNC connector that Alinco uses on this HT. Apparently, there are two common variations on the female BNC chassis connectors that are used for antenna connectors. One has a center conductor contact area in the form of a concentric ring, the other uses two small metal "fingers" coming in from opposite sides as contact points.
The "finger" contact connectors such as those used on the Alinco transceiver eventually lose their "spring" contact tension and result in a very poor and "lossy" connection (or no connection).
The problem is very much aggravated by frequent switching between a rubber-duckie and a mobile antenna connector cord.
Contact tension can be at least temporarily restored by inserting the sharp end of a wooden toothpick between the contact finger (on one of the two sides) and the plastic insulator shell and breaking off the end of the toothpick which forces out the contact finger for a better connection with the male BNC contact center pin.
I thought myself "lucky" to be able to track down such an obscure and unexpected problem as this turned-out to be. Four weeks later, I was faced with an older Regency MX-7000 Scanner that exhibited very poor receive sensitivity. I was surprised to find that it had the same style "finger contact" female BNC antenna connector. Full receive sensitivity was restored (to the

amazement of onlookers) with the help of another toothpick.
It would be nice if the manufacturers would get the message
and cease using these troublesome "finger contact" BNC chassis
connectors!

Sincerely yours,

W. Neil Clendenin
WD0GXL

(ARRL never published the above letter; probably because they
were afraid that it might offend a good advertiser. Meanwhile,
more and more amateurs are experiencing this very tough to
isolate problem with their DJ-580T's (and possible other Alinco
HT's).)
W. Neil Clendenin

You might try the Ramsey fm 10a. The improvements they have done make it
worthy of the extra $5 more than they charged for the fm 10. If you dont
want to build it then you might look around at some of the larger electronic
outlets for a stereo transmitter that plugs into a cd player. I have seen
these down to around $27 in my area (so far-I expect the price to fall).

>sporadic, but I think that's a function of the receiving station's CW
>filter rather than my xmtr.

I have a FT101ZD, which is having a same problem.
First I thought it was a regulator problem, but it was not.
May be a problem in the VFO, but I am not sure what it is.
Would you let me know what is causing ?
e mail to hpaik@silver.sdsmt.edu

I have about 10 or 12 XT type IBM and IBM compatables for sale/trade.

Most are monochrome with 10 to 20 MB HDD. All are complete and in good working order. These would be good for 1200 to 9600 packet.

I have some 80386 motherboards -- no memory, but complete with CPU.

Also MANY, MANY 256k DRAM chips and lots of printers and other computer related stuff -- software, peripheral boards, etc.

any takers??

The Contest Card works well with both CT and NA, using the same port convention. It installs as an LPT port, but requires no interrupt, a real nice thing.
Have been using one I built from the kit version for over a year with no problem.
Building an interface cable is ... Challenging, however.

Jim,

There is no out of band modification for the IC-451.
You can move the radio to the 440 to 450 Mhz range if you like. But you give up
the 430 to 440 MHz range in doing so. The IC-451 only will cover 10 Mhz of bandwidth.

Source record: 220350

Well, I have not owned a Yaesu, but had a similar problem with
the Kenwood TS 520 (of the same vintage). My problem turned
out to be a mechanical instability of the VFO in the rig. I had
actually replaced most of the components in the VFO to no avail,
but when I carefully disassembled the entire VFO and very carefully
cleaned and put it all back together, it all worked fine evermore.

Try to see if you can induce any frequency jumps in the receiver
by tapping on the VFO - or if changing frequency by a "hard" turn
of the dial has some funny effect.

Good luck.

1180. 95 mitubishi galant ok for radios?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-11 16:01:34 UTC
From: jbdaniel@facstaff.wisc.edu
Message-ID: <jbdaniel.36.00100735@facstaff.wisc.edu>
Source record: 220368

Hello.

I finally got my new car after mucho deliberating. The Galant comes with a warning not to install a transmitter b/c of the ECU in the dash. In practice, I don't know if it's okay to do so or not. Mitsu and all other car companies are just covering their asses so they can void your warranty if anything blows. Does anyone out their have a Galant with a vhf/uhf installation? I'm not running out to buy a radio just yet, as I'll be strapped for a while due to the new car purchase, but I thought I'd ask.

If the ECU in the dash is the problem, would it make sense to get a remote head type radio and put the RF deck in the trunk? Then again, running 50 watts that proximal to it still might cause a problem.

whatever,

thanks in advance,

Josh, N2JLL/9

Kenwood parts are distributed by Pacific Coast Parts Distributors.... Their servive is really good..
1-800-421-5080 I sent an order for parts directly to Kenwood and they forwarded the order to PCP.....

1184. Kenwood 732 help?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-11 19:58:54 UTC
From: craigb@sdd.hp.com
Message-ID: <3hj4tuINNmhr@hpsdlss3.sdd.hp.com>
Source record: 220366

Does anybody out there have knowlege of the Kenwood TM-732?

Mine has a problem. I think I may have fried the control unit
by hot switching from the mic to a TNC with the power on. The
symptoms are:
- Mic completely dead, no buttons do anything to the radio
- TNC no longer gets power from radio
- Grounding the PTT line at the radio mic connector does
not key the radio (as it should, I think)

However, the radio's front panel is still fully functional, and
if I power the TNC from another source, the TNC can key up the
radio. Receive works perfectly.

Does anybody have any suggestions? I'm stumped. Thanks!

>hold any charge. They're about three years old and have been run "flat"
>before charging so I don't think it's a "memory" problem.

Your problem is almost certainly because you ran the battery "flat"
repeatedly in fear of the mythical "memory" problem and reversed
polarity of one of the cells in the battery. Do that enough, and
the cell will fail open. Never discharge a NiCad *pack* below 1.0
volts per cell. (It's perfectly OK to discharge *individual* cells
down to zero volts, but don't do that to a pack. The weakest cell
will discharge first, and be reverse charged by the current
remaining in the other cells. This is a recipe for disaster.)

>I vaguely remember that old NiCads can be temporarily revived by an
>overvoltage charge cycle? Any one else heard or used the "trick"?

If a cell *shorts*, you can often temporarily fix the problem with
a stiff jolt of current that will blow the short open. But once
a cell starts growing the dendrites that short the cell, it will
quickly short again. You can't force current through an *open*
cell, so it's a lost cause.

>Can these be saved or is it a case of swallow hard, throw away and buy
>some new ones?

Buy new ones, and don't mistreat them the same way. Packs treated
properly should last for about 500 full cycles, or several thousand
partial cycles. Don't discharge a pack below 1.0 volts per cell,
and don't *overcharge* a pack. Doing either will drastically shorten
the life of the pack.

Right, your isolation transformer has enough losses to attenuate the
surge current spike.

> The Variac box has a 3-wire plug and the ground only goes from the input
> to the output. My ohmmeter shows infinite from either side of the line
> to the ground. It reads about 0.2 ohms across the line.. which I guess

Yeh, something like #10 wire.

> Is it possible that a 20 amp Variac has sufficient initial inrush
> current when first connected that it will trip a 20 amp breaker... but
> then why doesn't the little 20 amp fuse inside the Variac blow?

Even a non-time delay fuse has a slower response than an instantaneous
breaker.

> Any ideas what the problem is? From the looks of this thing, it is
> hard to imagine that there is anything actually "wrong" with it.

I would guess that it is just inrush current (as you suspect) and what you
need is a time delay breaker. I have a wimpy little 3A Variac and the lights
flicker noticably even when I switch that on.

You might want to look at a text by Ulrich Rohde called "Digital PLL Frequency Synthesizers - Thoery and Design". It has a section on Fraction N synthesis. This book references (and another possible source) a manual by Hewlett Packard for their HP3335 Signal Generator. HP has used fractional N sources in a lot of their equipment over the years. The manuals for HP equipment can be purchased as a part # from your HP supplier (1-800-387-3154 Canada).

Hope this helps.

>I like the no radial feature and size but woundered abt how hard to tune
>and if they are known for TVI problems??
> THANKS..DE:N9KUD..JIM
I have had a an R7 for over two years. I have had no problems with tuning
other than last field day I had to move it away from a stock trailer
to get the swr down on 20 meters. The first time I put it up I didn't
get the clamps tight enoung and I had to retune it. For me it worked
just like the directions said.

I have taken it down and put it back up for two field days and I am
getting ready to move it to my travel trailer. The low angle radiation
they claim seems to be true on 15 at least. I tried to work the
Russian satilite I could only here it for a very short while when it
was low on the horizon.

I have done a good deal of antena modeling and a vertical half wave
has a good deal better low angle radiation than a quarter wave.

I would really like to see some one compair the Gap and the R7 side
by side. I don't think that I have ever heard anyone that was not
happy with a Gap.

To get all of 40 meters you need a tuner as it will only tune about a
third of the band before the SWR gets higher than solid state finals
like. And its streaching it to cover all of 20 meters. I have worked
qrp with no problems.

Mine is mounted on a ten foot pole on the eve of my house. There is
no way a vertical can work as well as a dipole the proper height unless
you are on salt water. The ground losses in the far field will get you
period.

I would buy one again.

1194. Converting Kenwood TH-78E for use in the U.S.??

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-12 12:29:20 UTC
From: Nick Sharp <nsharp@rain.org>
Message-ID: <3hkuv0$r6p@news.rain.org>
Source record: 220377

I bought a Kenwood TH-78E (European version) dual-band HT a couple of years ago while I was on sabbatical and living in Germany. The radio has been of little use to me since returning home because of the fact that it is set for the european FM bands (430-440 and 144-146 Mhz). I would like to convert the radio for use on the U.S. bands.

1. Can this conversion be accomplished?
2. Can I do it myself (I have been hoping the it is something as simple as a reset procedure or code entry to reprogram the microprocessor)?
3. How is it done?
4. If the rig has to be returned to Kenwood for the conversion can anyone provide me with their customer service or technical assistance phone number?

Thanks in advance for any help or suggestion.
Nick

1198. TimeWave Technology DSP 9

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-12 17:02:00 UTC
From: spago@micronet.it
Message-ID: <spago-1202951802000001@line05.micronet.it>
Source record: 220381

My father is a radio amateur and has found out DSP 9, an Audio Noise
Reduction Filter manufactured by
TimeWave Technology Inc.
2401 Pilot Knob Road /134
Saint Paul, Minnesota 55120
a short time ago. He's very enthusiastic about it and would want to buy it
directly in USA. Could anyone be so kind to tell me if TimeWave Technology
has an IP address or give me a mail order shop address where I could buy
DSP 9 from Italy?

Thank you very much for your help

1200. Yaesu FT-51 freq range?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-12 17:06:28 UTC
From: caldwe33@futures.wharton.upenn.edu
Message-ID: <3hlf6k$js9@netnews.upenn.edu>
Source record: 220383

Does anyone know the frequency ranges of the FT-51R after modification?

Will it go RX/Tx as far as the TH79?

300-400 mhz receive?

Thanks for your help.

Sean

1201. Take the Field day survey

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-12 17:10:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.9682.7583.0NFB9280@woodybbs.com>
Source record: 220384

LG>Your most favorite antenna (easiest to install) Is:

10M-80M elevated vertical. Elevated 10' off the ground and using 10-12
33' radials as guys.

Also, 40M-80M dipoles at 30' for those times when the vertical just has
too much low-angle radiation.

LG>The antenna that can go on FD, and makes the most contacts (harder to
>install) IS:

Tri-band Yagi. Makes the most contacts into a PARTICULAR DIRECTION, but
more difficult to erect and rotate toward the guy who just called you
from the back side of the antenna.

LG>Your favorite HF rig:

TS-930S on CW, TS-440S on SSB

LG>The one that made the most contacts:

TS-930S on CW, but due mainly to the expertise of the CW ops over the
less-experienced phone ops. The phone station should have made MANY
more Q's if they'd had more experienced operators.

LG>Your favorite band: Most contacts made on:
40M 40M

LG>Your favorite antenna tuner:

MFJ-986 Differential T-Tuner

LG>favorite power source: (AC gen, Battery, solar or other)

Generator

TH> Favorite foods:

Hickory Smoked Pork Ribs and Turkey(s) (a la N0IJY)
Home-Made potato salad (also a la N0IJY)
Watermelon

Recipes on request... heheh!

TH> Favorite CW devices:

Bug
KC Keyer
Super CMOS Keyer II

TH> Favorite method of removing RF from the station next door:

OPEN stub on the 40M station to suck out the 40M harmonic on
20M. Same for each band, to get rid it's interference to the
band just ABOVE it. Cheap, and worth their weight in GOLD.

1202. PC card 50Mhz DDS Generator

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-12 17:42:13 UTC
From: erichter@editec.artinet.de
Message-ID: <F7oPvAsFBh107h@editec.artinet.de>
Source record: 220385

For those of you out there who struggled until now to build a precise and reliable NF/IF/HF source, my latest developement may be of interest:

- short PC plug in card
- a 50 Mhz DDS Generator (based on AD7008)
- 32 Bit resolution (0,011641532Hz!!!!)
- Frequ. output 0,011Hz to 15Mhz (20Mhz is possible)
- output power >13dBm into 50 Ohm
- 4 channel 12 Bit A/D converter (with pre-amp�s)
- high purity signal

- Test SW available (incl. Pascal Source code, allowing for
fixed frequency setup and A/D test)

- Wobbulator SW allowing for any start/stopp frequency
build in adaptable error correction (non linearity of Demodulator heads)
Precise Raster Display to show all 4 channels in different colors
(resolution 1Hz!)
Power level readout (resolution 1dB)

This card is useful for (but not limitted to):

- NF-Testing (HiFi Bandwith, NF Filters)
- IF- Testing (smallest christal filters can be expanded over the total PC screen)
- HF Testing (Receiver Input Filters)
- VHF and UHF Testing with external mixers
- Reference Signal for High Resolution PLL circuits

The following complete support is available:

1) complete 76 page book describing all chips and circuit details
(circuit discription is currently in german, chips discription in english will be completely available in english soon). Book comes wit Test SW.

2) professional Pc board with soldering stopp and Parts layout

3) Wobbulator SW

4) Complete Kits

5) Assembled and tested ready to plug in cards

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi, I have the following for sale. I'd like to sell all
of this together, but I'll consider any offers. Basically
this stuff is taking up space, and I could really use the money.
Here's what I have:

Swan Cygnet 270B 10-80 mtr. tranceiver w/hand mic
Heathkit Dual HF Wattmeter HM-2140
10 mtr. dipole antenna w/about 15-20 ft. of coax (less connector)

The Swan is in really good condition. It needs a new
tube or two since the output power has decreased over the
few years I've had it. This rig was primarily used on the 10
mtr. band. $275 + shipping for everything. If you have
any questions about any of the equipment, feel free to
e-mail me. Thanks!

- aaron -

Title : NEW MOBILE 2 MTR...SOON!
From: KD4AWS@N9LYC.#NCKY.KY.USA.NA
Hello to all who reads this message. I was in my local R.S. yesterday,
and was told that they will be selling a moble 2 meter rig in the near
future. It will have all the features of the htx-202, but will be 50
watts output. I was also told that the unveiling of rig will be at the
DAYTON HAMVENTION this year. My local store has ordered 20 of them, and
when they come out on the market, they will probably sell like hotcakes;
just thought you would like to know the latest!!! 73 de KD4AW Steve.
Louisville, KY.
>> Editor's note: Just like the HTX-202 huh?? Well then look for lots
of listing for these new rigs on packet. HTX-202's are a dime a dozen
since they simply don't modify for "out-of-band".

This is pretty interesting. There is certainly a market for
This is an interesting product, There is certainly a market for
this product. Please note, however, that several companies
(including the .signature company) already have had these on the
market for at least two years. More recently, speeds up to
34MHz output with exact 0.02 Hz steps are available. Prices run
from about $200 to $600 depending on what you want.

If your prices are substantially lower, then you are providing a great
service. Past issues of 73 Amateur Radio Today have shown how to
connect DDS to PCs. Jim Rowe in the February 1994 issue of Electronics
Australia had a review on one of our products. (EA is an excellent
magazine for those interested in good projects, BTW).

Good luck on your design.

They may have good service, but their prices are very extremely high.
Eg. TS-940 power supply pass transistor 2N5885 are about $20 from
PCP. I can buy the same part for about $4.00 from Newark. It pays
to check other sources, unless, of course, you need knobs or stuff
that no others would carry.

30L1 = Built like a battleship
SB220 = Not near the quality of the 30L1 but over twice the output

Both are good amps. The SB-220 is fine if you don't try to get the last
possible watt out of it and run it that way all weekend in a contest.
If you do it will crack the PS diodes or nuke the band switch, I've done
both :-). Neither works on 160.

American Science and Surplus.

They have tons of neat stuff, but no not deal specifically in
electronic parts. They do have lots of motors, circuit boards, old
keyboards, etc etc. Fun store, and worth visiting.

Hey I bought mine brand new for $399.00 modified it my self in 10min.

Thought used equipment was only worth 50%-70% of new value.

This would make an FT-530 worth $225-$275

If I can get 400 out of mine will sell it and buy a new one .

There does alway seem to be a hamfest about every weekend or two
within short driving distance to the area. Other than that I've heard
of a place called "American Science" never been there, but their
number is 708-232-2882.

If anyone has any other ideas please post!

I am looking for a schematic and/or manual for a Kenwood TR-2500 2M HT.
Mine has stopped working. It transmits, audio is fine, and TT works,
but it will not Receive. I need the schematic for troubleshooting.
It worked fine, till it was dropped on a concrete floor. I suspect
a broken crystal.

Source record: 220311
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

My club is considering putting up a weather data gathering system. We would like to be able to track wind speed and direction, rainfall, temperature, and possibly pressure. We may possible have multiple sensors at different heights on the tower (bottom and top) We would like to sample the data and write it to a file on a computer at the gathering site. We would like to then be able to use packet to access the computer and look at the data and possibly download some portion of the data. We would also like to use the packet system as an node.

We are considering using a 386sx with a couple of 60MB SCSI hard drives for the computer.
A Kantronics KPC-3 for the TNC.
A Kantronics weathernode or a Davis weather station.
Possibly a GE Master II or Master Pro for the radio.

Has any body done something like this? Is there some software that will assist us in making this work? Have I forgotten anything?

TIA
Bruce

It's too bad that you consider the HTX-202 worth "a dime a dozen" just
because they won't cover out of band. For goodness sake, it's a Ham
radio, not a scanner. I prefer to own a scanner to be able to listen to
anything under the sun and my HTX-202 for good quality, intermod
resilient 2 meter FM. I'm a firm beleiver in using the right tools for
the job. The sacrifice of a wide, intermod susceptible front-end to be
able to receive out of band communication is no worth it.
You may see plenty of 202's on the used market but you better believe
that the number of owners who keep them is proportional. I think the
HTX-212 will be as successful if the price is as relatively affordable
in the mobile market as the 202 is in the HT market.

Yup... not limited to Alinco products, either. My old Icom IC2AT (the famous thumbwheel HT) has one of those. It also has the problems related to these connectors. I had taken to prying the fingers closer together to fix the problems, although the toothpick idea sounds like the next best thing to swapping the piece of crap for a good BNC.

TAPR sells a kit called METCOM that's a little single chip micro
designed for interfacing remote telemetry instruments to a TNC.
That would do for realtime readings. For gathering a lot of data
and forwarding it on demand, a different approach, like the one
you outlined, would probably be better.

I'd suggest using Desqview. Run your data logger in one window, and
NOS in another. You can then ftp the log files down from the site
any time you like. Linux would be even better, but you'd have to
write your own instrument logging software. With Desqview, you can
use the DOS data logging software supplied with the instruments.

(You might be able to use Linux's dosemu to run the DOS logging software.
I haven't tried running realtime DOS interface software under dosemu, so
that might or might not be practical.)

Alas, I've got one in my new laptop too. Self-discharges in a hurry
doesn't it? I don't have any words of wisdom on this subject. I just
use it until the computer signals the battery is low, then plug in
the supplied charger and wait until the charge light goes out. Works
so far.

1242. Yaesu FT-530 HT

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-14 18:06:34 UTC
From: sbaldwin@community.net
Message-ID: <3hqrfa$bvk@odin.community.net>
Source record: 220324

I just recently purchased the new FT-530 dualbander with built-in cross-band repeating. It's truely a wonderful radio! One bad thing I have to say about this radio, is that the documentation is poor, to say the least. The manual that came with it, contridicts itself in several places. But, once you play with the radio for a bit, you can figure out where the tech manual writers messed up, and pretty much go from there.

Anyway, does anyone know of any California 2-Meter or 75-Cm repeaters like the 220 Condor? The Condor is one great link of many 220 repeaters up and down California, but I can't seem to find a 2-Meter or 75-Cm equivelant. Any information to my email-box would be greatly appreciated! Take care, and 73!

And the future is now... Been in Lexington, KY for four or five
days..

> It will have all the features of the htx-202, but will be 50
>watts output.

Uh, not a good way to describe it. It's a full-featured low-end Icom
radio with Rat Shack plastered on it. It's NOT a high power HTX-202,
some people might get all excited about a 50watt handheld. :)

> I was also told that the unveiling of rig will be at the
>DAYTON HAMVENTION this year. My local store has ordered 20 of them, and
>when they come out on the market, they will probably sell like hotcakes;
>just thought you would like to know the latest!!! 73 de KD4AW Steve.

Sold four of 'em in town I know of... And like I said, they've only
been here four days.. So yes, they'll sell good at $350.

> >> Editor's note: Just like the HTX-202 huh?? Well then look for lots
>of listing for these new rigs on packet. HTX-202's are a dime a dozen
>since they simply don't modify for "out-of-band".

I wish editors like you didn't exist.. If so, I wouldn't have had to
purchase an intermod filter for MY HT due to intermod problems from the
front end being wide as the galaxy... I *HAVE* a nice scanner, thank
you very much. On the other hand, if someone doesn't like their new
Rat Shack mobile I'll take it for a few bucks.. *Shrug*

Model: FT-900
Date: 24 August 1994

Original Freq. Range: 160-10M (Ham)
New Freq. Range: 1.8-29.99MHx TX

Important Notice Regarding Disclosure
Restrictions

This information is autorized for distribution only to
individuals who are members of the U.S. Military Affiliate
Radio System, Civil Air Patrol, or other government services
specifically permitted by the FCC to use non-type accepted
equipment such as that utilized in the Amateur Radio Service.
Release of this information to individuals not bearing a
license in the MARS, CAP, or other such service is not
authorized by Yaesu USA.

1. Remove the two screws from the top cover, and the two
screws from the top rear area of the rear panel, so as to
allow the top cover/heat sink to be slid slightly toward
the rear. The objective is to be able to see into the
CNTL-1 Unit, which is the inside part of the front panel
(not the detachable sub-panel).

2. Locate test points TP3001 and TP3002 on the CNTL Unit.
They are located near the top edge of the board, in the
center from left to right. With the transceiver still
turned off, connect a jumper (alligator clip is ok)
between these 2 test points.

3. Hold in the following 4 buttons: [PROC], [ATT], [IPO],
and [NB]. While holding them in, turn the transceiver on.
Release the buttons.

4. The display will indicate OFF.
Turn the VFO dial slowly until the display reads ON.

5. Press the [PROC] button to write the new instructions
to EEPROM.

6. Remove the jumper across the test points.

7. Replace the case screws. Mod is now complete.

As far as Radio Shack is concerned, "unveiling" a product DOESN'T NECESSARILY mean that's the first time it'll be sold -- just that it will be "officially" announced. They may very well be available in Lexington by now.

For those wondering... I understand that it *will* be modifiable for MARS/CAP. It's EXACT range when modified is still unknown to me.

For anyone who's actually see the thing... is the DTMF keypad on the mike backlit? Too much to ask, I'm sure. Yaesu seems to be one of the few companies who've recognized how convenient this is.

Hi Dave,

Yes I would be interested in one of the computers. Hovever there
seems to be a minor problem: To make the deal worthwile,
the price should not exceed 100 $ including monitor and shippment.

This shows the following:
Advertising here is sometimes frowned upon. (I personally do not mind
to much, as long as it does not take up too much space)

Advertizing an article, the value of which is below the cost of shippment
over more than a couple of miles, and than on an international media,
is positively silly.

Good Luck, Moritz DL5UH

Carlos gives good advice. The biggest mistake a new ham can make is blowing a wad of cash without really knowing where your interests will take you. In the beginning function and budget should be your guide. Not cosmetics.

Plus, as you get to know other hams, they'll give you the benefit of their advice (no ham is without an opinion) and experience. And, you can try out their equipment, too. THEN you can decide what you want.

It's a great hobby and you can meet some very interesting people. Not every ham is the stereotypical pocket-protector type...few are actually.

Enjoy!

It does not look like it. Appears to be solid keys. I've looked at
it a few times, but I really couldn't say the specifics. Looking at
the box didn't even clue me in as to if it had extended receive (UGH)
or anything. Look for an Icom in the $350 range and there you go. I
have yet to see one, but a friend of mine says that he has seen a model
that looked like the Rat Shack one in a magazine, but couldn't find it
again.. It very well could be an older Icom radio. As as a poster
said earlier, the trend is that older radios have less intermod problems.
Due to cheaper and wider front ends I'm sure.. If they make radios with
wide front ends they should make sliding band pass filters standard.

I'm going to be buying a Ford Explorer and want to be able to run my HT in the car with an external antenna (like I do now with my Ford Bronco II). I don't really want to be cutting a hole in the roof for the antenna.

Can anybody recommend the next best way to mount a short (14") dual band antenna on a Ford Explorer? Should I use a glass mount, or a mag mount (I'm not that excited about having to place and then remove a mag mount antenna each time I get into the car).

Also, have there been any other problems associated with running an HT in an Explorer?

Source record: 220248

For a friend who does not have direct Internet access, I have the
following request:

Would anyone out there know where one could find a sweep control IC for a
Tektronic Model 465 scope (early 70s vintage) to be used on serial number
series B 250000 to B 300000 (approximately)

The part No. is 155-0049-01. It is a 20 pin chip, labeled on the board as U-870.

The problem with the scope is that it has no horizontal sweep. There is
just a dot in the middle of the screen.

Also, does anyone know of a source of parts for this scope? We have been
told that both the manufacturer in Oregon and the Canadian supplier, have
no part left for this model.

Please e-mail directly and include your phone No. if possible as I cannot
read this newsgroup regularly.

>TNX, DE WB5PBJ sk

I own the DSP 59+ and had previously had whe W@@R DSP unit. I was not satisfied with the W@@R unit, and sold it. When I got the Timewave DSP 59+ I thought the front controls were tight and hard to operate. A couple of weeks later I called Timewave. They asked me to send the unit back, so I shipped it off via Federal Express. About 4 days later a replacement unit arrived. It was the latest version of the unit, with a complete new motherboard and a brand new fascia. Now thats what I call service. If quality of service is of any value when choosing a DSP unit, then IMHO you can depend upon Timewave. It also works VERY nice.

Read my lips: ICOM 281H. I-C-O-M.. Just like the HTX-202. And
yes, it's $350.

It's obvious you used to work for Rat Shack if you think their amp can
only handle 1.3:1 SWR. But heck, why not... Cars that register 85
couldn't do 86 could they? Can we say "let's put 1.3 so some idiot
doesn't stick a piece of coat hanger in the antenna jack and expect to
get 30 watts out of it."

From: holden@cpcn.com
Message-ID: <3hu0q7$pco@netaxs.com>
Source record: 220252

I bought some coax recently to attach to my ICOM 725. When just the center point of the plug is in the S0239, i have great reception. If I screw the conducter entirely on, I get horrible reception on any freqs above 20 meters. My SWR is really high when the plug is not fully connected either. I have the coax attached on the other end to a dipole. AAny ideas on why this is happening?

I've had my R7 for about 5 months and I am very pleased with performance. It might be a compromise antenna but I have not had to sacrifice much. the antenna is not difficult to tune if you mount it per manufacturer's specifications. I has nill TVI if you have it far enough away from the house. We have had 70 mph winds once, 40 mph winds, and 30 mph winds and the antenna is still up and strong. FYI I worked Virginia on 17 with this antenna, got a 55 rs, during poor band conditions from Alaska. So, I'm pleased with my antenna!!

Well, its not exactly inrush current, but magnetic saturation. You probably didn't try it too many times. It depends on what the power line phase is at the exact instant the plug (or switch) makes contact. The worst is at the voltage zero crossing, paradoxically. If the contact makes at the voltage zero crossing, then the iron core accumulates flux during the entire half cycle of the line, starting from zero. Normally, in steady state, it gets to the voltage zero crossing with near maximum flux in the reverse direction, and spends the first quarter cycle (up to the voltage peak) losing flux and returning power to the line before the flux passes through zero and starts to build up again. So, if power is applied at the voltage zero crossing, the core needs to accept *twice* the normal, steady-state peak flux. Because these things are expensive to begin with, no manufacturer wants to include twice as much iron as needed for startup. My big variacs clunk and blink the lights, too, but don't pop breakers. I wonder if you might have an unusually sensitive breaker - you might try the variac on another circuit. If that doesn't fix it, you could install a negative temperature coefficient thermistor (inrush surge limiter) from Keystone Carbon or others in series with the input line.

>
>You should always wind down a variac before switching it off or on,
>otherwise you get the type of problem you describe.

The output setting of the variac is NOT important. This kind
of power-on surge happens because the transformer core has some
remnant
magnetic field from the last time it was connected. If the first
half-cycle of the AC input is in the same sense as the remanent field,
the core of the transformer saturates (and the impedance presented
to the poor power cord is a few tenths of ohms, just the
copper resistance, without much inductance).

The surge is normal. There's no way to predict it (it depends
on a coincidence of the AC phase when connection is made/broken),
but it only lasts for one half-cycle, the core gets demagnetized when
the current changes direction 1/120th of a second later.

One can minimize the surge by deliberately drawing significant
output current (the output current tends to demagnetize the core,
being in the opposite sense as the primary current); if you have
a light bulb on the variac output, and the output knob turned UP,
the brief core saturation at power-on time can be averted. The
trick is, the light bulb has to be rated for the full current of the
variac...

John Whitmore

p.s. any transformer will do the same thing; the only common large
transformer that doesn't have an output load always attached, is
the familiar laboratory variac.

>much does it hurt to leave them in longer?

Overcharging is any time you continue to push electricity into a battery
that is "fully" charged. Since all the reactants have fully transfered
to their respective plates, further current input only serves to heat
the cell, which will dry the cell out, and form random dendrites that
will eventually lead to cell failure by shorting. Overcharging at a high
rate will cause a battery to fail quickly, but even moderate rate overcharging
is harmful, and the harm is cummulative. The "trickle" charge of most
chargers is at the 0.1C rate, and that's too much. It will cause damage.
You can safely trickle, or "float", charge *some* NiCads at the 0.01C rate
indefinitely. These are cells designed for backup service. Ordinary
radio pack cells shouldn't be "floated". That'll promote dendrite growth
and eventually cause them to short.

The trick, of course, is in determining when the cell becomes "fully"
charged. A straight timed charge can be misleading because the charging
process isn't 100% efficient. It may take 115-120% charging current to
reach 100% charge. And we rarely know the exact state of charge of a
battery we are putting on charge.

A better method is to detect the temperature rise when charging reaches
completion. Batteries that can use this method have thermistors in
the pack, and their chargers are designed to read these thermistors.
Cell temperature rise starts rapidly after full charge is reached,
so this method is fairly reliable.

However, the best charging method uses a pulse charger with voltage
sensing between pulses. When a NiCad just reaches full charge, there
is a droop in the terminal voltage of a few millivolts. Continued
charging will then cause terminal voltage to rise again. The idea
is to catch the cell right at the droop, and stop charging there.
This will work with any NiCad, and doesn't require a thermistor
in the pack.

The NC-42 uses this method. Unfortunately, when charging *packs*
as opposed to charging *cells*, there's a fly in this ointment.
All the cells won't reach "full" charge at the same time. That's
because the cells aren't closely matched. The pulse charger will
stop when it detects full charge of the first cell. So Yaesu uses
a trickle *overcharge* to top the battery off. This isn't absolutely
harmless, since it's overcharging some cells while still charging
others, but it is a reasonable compromise if you want the battery
pack to be at full charge.

I'd recomend using matched cells in your packs if you have a choice,
and stopping the charge as soon as the pulse charger says the battery
is full. If you must overcharge at the trickle rate, don't let it go
on very long. It's better to have a battery pack that's slightly less
than fully charged than one that is consistently overcharged.

A good rule of thumb for how long to let the trickle overcharge go
on if you must have a fully topped pack is one hour at 0.1C for
each amp-hour of battery capacity. So for a 800 ma-hr pack, you
can trickle for up to 48 minutes. For a little 200 ma-hr pack,
you shouldn't let the trickle go on for more than 12 minutes.
12 to 24 *hours* at trickle would represent a *gross* overcharge,
and will certainly shorten the life of the battery.

1282. Kenwood TH-28A TX Shift Question

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-16 15:16:56 UTC
From: cj@boi.hp.com
Message-ID: <D43MG9.9qu@boi.hp.com>
Source record: 220265

I've recently come across a TH-28A sans manual. I've figured out how to
do most of the things I want to do, but I have not yet figured out how
to set the transmit shift. I can get it to toggle "off" "+" and "-", and
it seems to have the appropriate "standard" shift for the 2m band (0.6MHz),
but I'd like to know if I can program a non-standard shift.

So, if anyone knows how (or if) this can be accomplished, please let me
know. E-mail to cj@boi.hp.com if fine, or reply to this note...

Thanks in advance...

An iambic keyer gives alternativng fots and dashes when you press both paddles simultaneously. That way all letters (I think) can be sent by only one up and down of the thumb and finger.
It's not essential, but it's nice and it's already programmed into most keyer chips nowadays.

David, For the IC-2GXAT receiver opening do the following steps as listed.

1. Turn off the radio

2. Press and hold the " Function, Scan and Dupe keys "

3. While holding those keys turn on the radio.

4. WAIT until the display returns to normal then continue to hold the keys for about 2 seconds
after the display has returned to normal before releasing the keys

5. The receiver is now opened up and will cover 138 to 179 Mhz or so.
It WILL NOT do aircraft AM receive nor tune into that frequnecy range.

6. HAVE FUN !!!

Dave,

The IC-2340 or Ic-2700 will not do 9600 packet. No modifications from Icom either.

well, for starters, you might want to consider the used amateur radio
transceiver market - for some time there have been several models with
3-30 MHz tuning or more as a standard feature. and if you go back int
time far enough you get into things like separate receivers like
Drake R4's and Collins 75S's.

in new receivers, people tell me the drake R8 is OK...but it appears for
a lot of receivers, the price is up there...comparable to a transceiver
and there is a used market for transceivers...so you would have a better
shot at finding one of those...just don't transmit until licensed..

You should be able to find a 6-10 year old mobile for under $200.

I have been shopping for the same thing and have seen rigs with
few memories, no PL, low power, and no extended receive. These rigs
would not be appropriate for use on voice (for me anyway), but they
are perfect for packet.

These rigs should also have the advantage of a better front end than
modern radios which would imply less intermod and desense problems.
The HT I am now using for packet rarely reads below S5. This is due
to a relatively high RF environment, a good antenna, and a receiver
that is open from 100 to 500 MHz. Bletch.

I know there is at least one for sale in rec.radio.swap right now.

Good luck, Steve and 73

Allan, the question is, what do you plan to use the radio for. Do you want one you can carry around with you or is operating going to be from a fixed point in the house. Also Do you plan to operate from a vehicle? I assume you are in the Baltimore Washington Area and if so, there are many repeaters you can use with just a HT. If you plan to use the radio only from a fixed point in the house, and from a vehicle, a mobile radio will work nicely and give you a lot more power to work with. There is a big Hamfest coming up in March at the MD fairgrounds. You might be able to get good deals on either type of radio there.

As for brands, I personally use a Kenwood TM231A in the car and have a Radio Shack HT202. I like both radios but have heard good things about Yaesue and ICOM as well. I havent heard many people mention they are using Alinco or AZDEN equipment so I dont know much about them but they may also be good. 73 Marc AA3JQ

There is one I have it written up on a server that is not currently on-line. It involves holding 3 or 4 buttons down whil turning on the power...It's that simple. Though it does seem to make the rig more succeptible to intermod...

I will post it when I get the server back on-line...Or, you can just call Icom, they will tell you. That's what I did...

Good luck!

That's an interesting note. I recently did this to my rig (Purchased last may, low serial number) and it receives from about 50MHz to something like 204MHz continuously! Including the AM aircraft band.

A friend of mine has a RS HTX 202 that is, naturally, out of warranty,
and it suddenly died giving only some kind of error msg when powered up.
As I write this it occurs to me I didn't ask him if he'd tried a known
good battery pack, which is THE major source of HT problems, but thought
I'd post a query on here about resetting the HT CPU. Is there another
way of resetting the CPU so he can start over with programming it than
listed in the book, which doesn't now work with the radio?

I don't know of any other way, but I think you're right on track with the
battery pack. Try using an external power source. The error code can be
helpful if that doesn't solve the problem.

Source record: 220290

I stopped by the store last night to pick up my schedule and discovered that the new 2M mobile is in stock. I was on my way to pick up a pizza so I didn't have much time to play with it. I grabbed one from stock and looked it over quickly.

Here's a few things I learned:

The catalog number is 19-1125. Call your local RS and have them check their POS computer for this number. See if they have one in stock.

It looks a LOT like my icom IC229H. The power, external speaker and antenna connector exit the same places from a very similar heatsink. The case looks the same. Several of the controls seem to be in the same place. The display seems to be the same. (I really want to find the geneology of this rig)

The microphone has the dtmf keys, of course and other function keys as well. I don't recall which ones. The keypad is not illuminated.

The price is $349.99. It comes with a 1 year warranty. The service plan covers whatever breaks or wears out for -5- years. It costs $39.95 (that's less than 70 cents a month). I know of no other manufacturer that backs their equipment that well. I know from experience that icom stonewalls.

The max power output is something like 40 or 45 Watts.

If I can get the boss to let me have one for a week or even a weekend I'll do a mini product review.

More information as it becomes available

Hello,

My TH79E seems to have a clone-function. It is not mentioned in the manual.
Holding the PAG.L/0 button and turning the HT on, the word 'CLONE' shows up.
Pushing PTT afterwards, the HT starts to send the DTMF-tones.
Not having a second TH79E, I wonder wether you, or some other HAM has any
experience with the clone-function. Does it work ?, i.e.

Another gadget. When I hold the VFO-button, for about one second, press PTT
(I don't release the VFO-button), then release both. It results in a
locked PTT-button.
Very handy in full-duplex-operation. Any experiences ?

Unfortunately, you couldn't use an actual amateur radio because the FCC requires that any radio be "type-accepted" for use in a particular service -- except for the amateur radio service itself, where the rules are much looser. Heck -- you can design and build your own radio!

You cannot, though, use your amateur set in the 800 MHz area. Sorry.

From: dgf@netcom.com
Message-ID: <dgfD47ss4.Cv@netcom.com>
Source record: 220198

I ordered a pair of replacement range crystals for the MIZUHO MX6Z from International Crystals. As there was no spec in the MIZUHO docs, I supplied them the one working xtal (known but undesired range) as a sample, along with the frequencies desired. 4 weeks later xtals arrived, but with them the VXO doesn't cover 50 kHz range as expected - the range is more like about 30 kHz (the center of the range is on the desired freq, but the lower and upper ends are about 10 kHz closer to center than they should be).

I've got no experience with VXO circuitry, so perhaps there is something about the xtal that couldn't be inferred by analyzing the working sample?

Does anyone have advice for me (I'll be calling ICM next tuesday, but I'd sure like to say something more intelligent than "it doesn't work right") or perhaps does someone know the real specs for MX6Z range crystals (the MIZUHO docs only say you can order certain other range xtals but doesn't say how to calculate or specify the xtal from a third party).

Much thanks!!!

Source record: 220200

I have developed a trouble in my VU DATA PS950B oscilloscope. It doesn't appear too serious, but I really need a schematic to get it going again. One helpful ham gave me the number for VUDATA in SanDiego.

I called them and they want $50 for manual. Is this the best I can hope to do? If anyone has any ideas, please let me know. I have called a surplus dealer in Boulder CO and they think they have one, but have not called back. They advertise the scope in Nuts and Volts!

Please reply direct to me if possible, as I don't always make it to the newsgroup on a regular basis. Thanks, Jim, W4QO 404-993-9500

1323. Re: Icom IC-2700 comments

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-19 06:04:32 UTC
From: hdshrinkkr@aol.com
Message-ID: <3i6n1g$e4@newsbf02.news.aol.com>
Source record: 220213

Kirk,

I have the Icom IC-2700H installed in my Volvo and I am very pleased with it. I installed the unit with a Larsen Glass Mount Antenna and the reception and transmission quality have been outstanding. Like you, I to needed a remote mouting mike due to the location of the faceplate. I do not yet have the IR mike, ICOM is backordered due to the quake in Kobe I was told, but it would seem to be a real plus.(as long as the batterys, nicad, have a reasonable service life)
I personally would not have brought the cordless mike either, but hey, if it's free then the price is right!

The sound quality of the unit left something to be desired, due to my mounting location, so I also obtained the ICOM remote speaker and it looks and works great! The unit has a large number of features and control, most accessable from the mike. To this day I have to figure out what type of "hanger" Icom wishs us to use with their handheld mikes!

Perhaps my only complaint it the lack of a remote turn on/off on the mike. I also would have like a input to allow the unit to be key switched via the igniton. In my discussion with Icom's excellent tech support I was informed that all memory is retained even if the power feeds are disconnected. So it may be possible to install a high power (25 amp) switching relay triggered by the ignition to solve this problem.(I just wish Icom had done it for me internal to the radio!)

I also carried out the extended receive modification (very simple, involves removing one jumper!)so I now have weather band and marine forecasts for traveling!

My overall feelings are the unit is a great radio, very well designed and thought out.(except for the on/off switch mentioned eariler)

If you have the chance to open up the unit for installation of options, I installed the Tone and Voice units in mine, you will see and admire the construction of the unit, it is built like a clock, very well done.

I own several other Icom rigs as well and all my experiences with the company and it's equipment have been pleasurable! In short, I highly reccomend this radio, I just wish I received a remote on/off instead of a IR mike!

73s,
Bruce

1325. Re: TH79E 'hidden' clone function ?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-19 07:06:55 UTC
From: dhinch@cello.gina.calstate.edu
Message-ID: <3i6qmf$60q@cello.gina.calstate.edu>
Source record: 220217

The cloning function you have discovered is as described in the manual for the TH-79A and is listed as "USA Only". This function is for cloning additional TH-79A's. The manual states that you also perform the same setup on the target HTs. Pressing PTT starts the operation. It is recommended that the EL power setting be used on the source unit and that the antenna be removed from the target unit to minimize the possibility of interference. Hope this helps out.

Man, I haven't seen any of that stuff in a long time. I guess it might
be available, but where...

Try some of the distributors listed in the Radio Amateur's Handbook, from
ARRL. That might be a good place to start.

Don't look at Radio distributors. This stuff is getting really high
volume use in high frequency switching power supplies. MWS in
Southern California is the big source. Unfortunately, you'll have
to buy the wire by the pound. I believe your best source will be
finding transformer shop who'll spool off a few feet for you.
(MWS Wire Industries 818-991-8553, also try Squires Electronics in
Cornelius Oregon, don't have number handy.) Last time I bought (for
work) a spool of 50 strand wire cost about $50.

Also try Kerrigan-Lewis at 312-772-7208 in Chicago. They have a nice
app note on how litz works. Litz is predominantly used in switching
power supplies, where a thing called the proximity effect makes the
wire cost worth it. This effect occurs at low frequencies.

1331. FT-51R undocumented soft-mods

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-19 19:11:53 UTC
From: taucom@kaiwan.com
Message-ID: <3i855p$h5e@kaiwan.kaiwan.com>
Source record: 220221

Here's some great info for those with the new Yaesu FT-51 HT's:

YAESU FT-51R Soft-Modifications - undocumented: February 1995

The new FT-51R utilizes software to control the various deeper level functions instead of some traditional pots and electronic components.

To access this undocumented menu:

1. Turn on radio, and select band you want to modify.
2. Turn off the radio.
3. Simultaneously press the 2 VOLUME keys and the CALL buttons while powering on.
4. You're now in the soft-mods menu.
5. You'll now see the following menu choices while turning the DIAL knob:

BAND 1 (top of menu)
IF NO 0
S-FULL84
S-1 19
SQL TH64
SQL TI4E
MOD L 25
MOD H 27

The only soft-mod I'm familiar with so far, is to change the deviation setting for the mike. This is done if you're dropping out of the repeater in the middle of a QSO.

Turn the dial until you see MOD L 25:
1. Press the FUNCTION key down for 1/2 sec. until F flashes.
2. Press the /\MHz or \/MHz to change the numerical value.
3. Press the FUNCTION key again to save this change.
4. Do the same for MOD H 27.
5. Power off.

I'm not sure exactly what the numerical values mean, so experimenting is in order.

I'm also unclear as to what the other menu items are. I believe they□
have to do with squelch settings, i.e., threshold.

I've also been told that the software can be controlled by an external computer, by accessing the handshake via simultaneously pressing 2 and 9, and powering on (remember MH-29, model # of the LCD mike). I don't know what connector or software is needed.

Please send any info you have on these soft-mods.

1332. FT101 Warc liberation

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-19 19:55:27 UTC
From: vanduyne@NorthNet.org
Message-ID: <PFcHlehQKi06078yn@northnet.org>
Source record: 220207

I have a Yaesu FT101-ZD that has all the things I need for WARC bands in there, except the bands must be 'liberated'... The techs at Yaesu have not been able to help me so far... I have two books, neither of which is exactly my radio (one pre-warc and the other for an apparent later model). I have a tech sheet from Yaesu explaining band switch modifications, but it's not my band switch. The radio does xmit on the frequencies, but the driver appears not to be getting to the output stage. I've gone blind trying to track it down, and follow the maze with schematics for the two different (incorrect) radios. There are some suspicious looking jumpers to ground on the back of the Premix card, but lifting them doesn't seem to do the trick.

Any hints? Does anyone have experience with this model and how they tucked the WARC bands away?

I'd like to get the bands going, as this is my main HF rig and due to financial circumstances will continue to be so for some time. (The Drake TR-4C is a powerful beast, but has no hope of the WARC bands.)

Thanks in advance.

1335. FT-51R Battery Display

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-20 05:37:03 UTC
From: dgra@qmgate.ECi-esyst.COM
Message-ID: <n1418834692.59418@qmgate>
Source record: 220216

On page 66 of the manual, under the illustration in the section "Checking the Battery Voltage", there is a procedure to display the battery voltage during receive and transmit by first pressing SUB OP before the FM, 0 then 0 to exit. I have tried everything I can think of. Both receivers are on when I do this but there is no voltage display when I exit. Where and when does it display the battery voltage? I was hoping that it was the same as my 530.

Thanks for any help, Dana AJ1R

Message-ID: <D4At2H.141@bri.hp.com>
Source record: 220218

In the UK, the RSGB's RadCom magazine of Sept. 94 compared 5 different DSP Audio Filters

1). JPS NTR-1
2). J-Com W9GR DSP II
3). JPS NIR-10
4). Timewave DSP-9
5). Timewave DSP-9+

Of these the opinion of BOTH reviewers (G3HCT and G3SEK) were for the Timewave DSP-9+. G3HCT is a keen HF DXer, and G3SEK is a fan of VHF DX.

It was noted that the Timewave was by no means the most expensive reviewed, and so it also took the title of 'Best Value'.

1337. Radio conversion help

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-20 12:46:23 UTC
From: blake@pt5000.pto.ford.com
Message-ID: <blake.6.2F488F1F@pt5000.pto.ford.com>
Source record: 220219

I hate to bring it up but, I'm trying to convert a 11 meter ssb rig into a 10 meter ssb rig. I've seen it done before by replacing the bcd switch used for channel selection with thumb wheel bcd switches that can do more combinations. But when I checked the switch on this radio, it turns out to only use a 6 digit binary code and it uses almost all the combinations. The chip that the switch is connected to, dosen't have any more legs to set high or low to adjust the frequency.

I assumed that this radio was PLL, but I noticed a lot of crystals. More than I would have expected in a PLL radio. I guess that one is the time base for the PLL and another might be related to the SSB side of the radio.

Anyway, if anyone has any ideas on converting 11 meter radios to 10 meters, please mail me a note. I can provide the make and model if necessary. I hate even using the "E" word (eleven meters) on this group, but I am trying to make a useful thing here.

Thanks in advance

73 de N4IZO Mike

We have been thinking of setting up an FM college radio station here
in Tallinn, Estonia.

What equipment shall we need and what are the approximate prices for
the tranceivers? Could anyone suggest where to look for a FM tranceiver
(should be stereo), as locally this kind of equipment is not available?
Used equipment will be also fine as long as it is in good condition.

Also we have a question about how easy it is to get record companies
to send you their records/CD's ? Which way to go to get that thing running?

Please contact me by e-mail <yhuubert@viabalt.ee>.

Hope to hear from you soon!

Thank you!

Juri Kaljundi

I recently bought the Power Station. The instruction manual says the battery is a sealed lead-acid rechargeable battery. I've heard of this battery refered to as a gel cell battery. What's the difference between gel cell and lead-acid.

Also, how far should I discharge it? For example, with a 12V NiCad pack there are 10 1.2V cells. I wouldn't want to discharge any one cell below 1.0V so I recharge it when the pack is at 10V. Does the same type of rule apply for lead-acid batteries?

: Two Items; I am desperately trying to get on 160 and, I currently own a
: Butternut HF2V. Can anyone Relate to me their experience with this antenna
: used with the 160 loading Coil?

Roger

I have an HF6V with the 160 coil and it works...sorta. Up until 6 months ago I was confined to small lots and rental houses so had no choice. The HF2V should not be much different as both antennas are real short for 160 and not very effecient. Practical experience follows.

1) Expect a relatively narrow bandwidth of abot 20 Khz.

2) The capacitors in the 160 coil will not survive full legal power limits. After blowing up 2 sets I replaced them with a vaccumn variable and a dc motor drive which solved 2 problems. I can now tune anywhere in the band remotely and the vaccumn Vari doesnt blow up.

3) Unless you own a wire company and ditch witch to put down about a 100 buried radials, i highly recommned an elevated mounting scheme and 4 radials at least 10' or so above the ground and 134' long. The radials can be zig zagged however you can best accomodate them within your lot.

with luck and perserverance you can work stuff with this antenna but expect to be frustrated and sit in pile ups for hours. If you are really serious about 160 save your money and then move to the country. Thats what I did Have a two element phased Inverted L array now on 160 suspended from some 90' pine trees...what a difference.

good luck

: connected either. I have the coax attached on the other end to a dipole.
: AAny ideas on why this is happening?

With just the center conductor attached, you are effectively hooking a long wire antenna to the radio. You are getting a high SWR because the impedance of the antenna isn't 50 ohms (the antenna is the wire plus the collection of metal acting as the return path--shield wires, etc.). Usually, the high SWR decreases the sensitivity of the receiver, the ability to hear weak signals. But, since most locations are noise limited, you lose mostly noise, so actual decrease in sensitivity is insignificant. An analogy is the use of hearing aids at a heavy metal concert.

The non-50 ohm antenna impedance may actually be a better power match, so that signals get stronger with a mismatched antenna. However, careful tests will often reveal that sensitivity decreases. You can find an explanation for this in the Introduction to RF design by Hayward.

I have been using belden 8214 for a couple of years for VHF, it is lower
loss the 213U and does not get "wet inside" like 9913 can.

I have also found a "neat" way to be multi band. I use a good discone
antenna, Diamond. Comet and last the Radio Shack. I use 9913 to feed it
and a tri-plexer to split in the shack for 144/220/440. This works great
in the attic as a multi-band "hit the repeaters" antenna system.

recently puchased a Defense Electronics Inc (DEI) TR-711 receiver, built fo the military in the 1970's. it has a front end for 55-260 MHz, with an 10 MHz IF. It's highly modular, so variations may have different front ends and IF's. It has an AM/FM demodulator with bandpasses from 500kHz to 3.5 MHz; and a video output with bandpasses from 6.25 kHz to 2MHz.

I'm interested in using it, possibly with a higher LO as a converter, for amateur radio astronomy. Now I'm not looking for a tutorial on radio astronomy, I'm familiar with those issues; and I'm an Electrical Engineer (but not a radio amateur). What I'm looking for is more info on this system, and some idea of its relative sensitivity stability and value.

I'll monitor this newsgroup, but I'd encourage a direct response. A referral to a "better" newsgroup for this question would be appreciated. Thanks!

>loss the 213U and does not get "wet inside" like 9913 can.

It might be of interest to start a new thread with a new title to discuss the pros and cons of various types of coax at VHF/UHF. I also use Belden 8214 and have for years, and the losses pretty much fall in line with the published specs provided that connectors are properly installed and the coax isn't kinked, bent too sharply, or "smushed" so as to cause a compression discontinuity.

Gary is correct that RG-213/U is a usable alternative, at least up through 2 meters, as it is rated at 2.2 dB per 100' as opposed to 1.8 dB for the 8214. -213 is also *very* durable and much less prone to damage due to mishandling (not to mention cheaper). (p.s. The attenuation rating noted is at 100 MHz, BTW).

Regarding 9913, I have heard diametrically opposing stories from experienced, technically competent and astute VHF+ operators. One swore he'd never use it again because of "creeping" in the connectors resulting in wter entry, etc., while another swore *by* it, saying that it could be installed in a manner so as to completely avoid those problems.

Would anyone care to start a thread on this subject? We'll need a new title, like "Coax: Price vs. performance" or some such.

I've got 4 full size AMCO equipment racks for sale
These are your basic computer room or Studio Audio/Video equipment racks

Each cabinet has the following:

Grey Smoke front (Lexan?) door
vented back door and top
front and rear 19" mounting rails
10 outlet 15 amp power strip
78H x 26D x 23.5 W
Blue with Black trim
"Wicked Good Shape"
Located in Braintree, MA
$250:00 Each

I have a pair of slip joint pliers that have a unique design
and work really well. They are made by a Swedish company named
BAHCO. I got them at a hamfest in Maryland about 7 years ago.
If anyone knows a current source for these tools I would greatly
appreciate the info.

>i wish to use a portable sony t.v. with an adapter designed for a
>sub-laptop compaq computer.

i should have also noted that i can deal with the power and mechanical
issues. sony has a special connector on the color watchman, not avail
locally and i intend to modify the unit to accept a more common plug.

the laptop adapter has plenty of wattage, at the same voltage, as the
sony adapter. it is just that one has the xfmr and i worry that this
is important for some reason beyond me.

thanks,

loren

1374. Mobile as a repeater!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-22 19:03:00 UTC
From: rick.curtis@lightspeed.com
Message-ID: <5162.2152.uupcb@lightspeed.com>

I just discovered that the Kenwood TM 733A mobile can act as a repeater for another radio, like my HT. Now I can use my little HT and a short duckie when I fish and have my mobile in repeater function and can hear or talk as if I were in the truck. I had no idea! Got the details from the dealer.

From: clint.bradford@woodybbs.com
Message-ID: <93.10047.7583.0NFB94BE@woodybbs.com>
Source record: 220158

Subject: Radio Shack 2m mobile??

>>...when they come out on the market, they will probably sell like
hotcakes;

When they come out onto the market, they'll probably be overpriced/
underfeatured considering what's already in the marketplace. Look at the
RS 2-meter amp, for example...

>>HTX-202s... are a dime a dozen since they simply don't
>>modify for "out-of-band".

Unfair criticism. So a unit performs EXCELLENT as it is advertised to
do, Certainly that is not a DETRIMENT to a solid Icom/Maxon/Tandy-
design.

: Does anyone know how to do this?

Hmmm. If you have access to TCMAN (do you know Andy Warner,
G1XRL/N0REN? He also works for Cray), ftp to kd4ldo.ampr.org. I've got
the mod there in the /pub/mods/yaesu directory. I forget the filename,
but there are a handfull of 470 mods there.

I pulled them from somewhere else - possibly wuarchive.wustl.edu or
ftp.ucsd.edu.

Howdy all you net folks and amateur radio people.

I bought a USED Kenwood 78A a while back for a good price and it's great. It works fine transmitting and receiving, but there is ONE little very annoying problem. It beeps a bunch. Now I don't mean the normal beep for button press, or beep cauze my battery's low. I mean, it just beeps. This seems to happen most when there is no radion trafic and I have not transmitted in a minute or so. At first I thought it was the cold (because when I first noticed the problem, the radio was cold) But, as far as I can tell, it has gotten worse since I bought it. I don't remember it doing it at all when I first got it. Hmmmm. It does this when it's plugged in and/or with the battery. I have the APO off and the battery saver on.

Does anyone have any idea what I should do (the radio is not modified). Or if I should send it to get repaired at Kenwood?

Thanks for any help,
Matt Clarke

1382. Yaesu FT-290 Prone to Intermod??

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-23 04:01:38 UTC
From: leigh@rain.org
Message-ID: <3ih1b2$48o@news.rain.org>
Source record: 220165

My elderly Icom 260a 2 meter all-mode rig recently died, and I've replaced it with a new Yaesu FT-290.

Using the new Yaesu FT-290 on a ten element beam in a fairly high RF area has been dissapointing: the Yaesu gets much more pager intermod than the 15 year-old Icom 260 did.

Is this typical of the FT-290? I wonder if I should fix up my ancient Icom instead of selling it "as is", and selling the Yaesu instead.

Thanks in advance. --Leigh/KM6JE in Santa Barbara.

Dana --

My wife and I recently bought a pair of FT-51Rs at the Tropical Hamboree in Miami and we've been very pleased with them.

The instructions given in the Yaesu manual to display the current battery voltage during transmit are incorrect. What we've found to work is as follows:

1. Ensure that both bands are on. (If only one band is on, press BAND OFF (F + BAND) to activate the side which is disabled.)

2. Ensure that the band you want to transmit on is the main band and is properly set.

3. Press SUB OP so the other band (the one you don't want to transmit on) is activated as the sub band and make sure that the triangular main band indicator is flashing for this band.

4. Press SET (F + 0).

5. If the radio isn't displaying the battery voltage (setting 25), turn the DIAL until it's displayed.

6. Press PTT to transmit on the main band. As you transmit, the display will show the current battery voltage. (If you hold PTT for several seconds, you can watch the voltage drop.)

To get out of this mode of operation and return to normal:

1. Press 0 to exit SET mode.

2. Press SUB OP to deactivate the sub band.

I hope this helps and that you receive as much enjoyment from your '51 as my wife and I are receiving from ours.

If you can't get this to work correctly or have any other questions about using your '51 (we've found a couple of helpful shortcuts that I haven't had time to document yet), don't hesitate to send me an e-mail message.

Message-ID: <3iim74$fr0@news.tv.tek.com>
Source record: 220170

I have an Icom 735 and a R5 vertical antenna mounted on

the roof. I also have an inverted vee for 80 and 40 meters.

The problem is that I have am AM broadcast station a

couple of hundred yards from my house and its ERP is 25,000 Watts!

It is at 1550 Khz and I get its harmonics all of the way to 30Mhz,

and probably far beyond. And a lot of noise throughout the rest

of HF.

Adjustments of the noise blanker and radio pre-amp help,

but not much. It is coax fed and I have a broadband balun at

the vertical's input (a coil of coax)

I really can't find much in the ARRL handbook that is

specific to this kind of problem and I can't move now.

If anyone has and suggestions, I would be grateful. Please

be specific.

The laptop adapter is probably a switching power supply and thus may be
more noisy. It also may want a minimum load which may be less than your
TV provides. On the other hand, the regulation is almost certainly better
than the typical wall transformer power supply.

BTW, there is a transformer in there, it is part of the switcher and provides
the isolation (and other things) that may be of concern to you.

If it were my TV, I would probably find an appropriate wall type adapter.

This sounds like a very tall order (as far as accuracy goes). You are
asking for resolution of better than 0.01dB.
Maybe you could compensate for attenuator errors with a look up table.
(correct for known errors). This would also work if you were to vary
the input to the amp or the output.

Bob, I've got the latest model, the "FT-290r II". Sorry for not
including the full model number in my original post. What are the major
differences?

: Catherine Macleod Kocher

I've noticed the same thing with my TS-440 as of late. Sometimes I can reduce the effect by pushing the switch with a circular rubbing motion. It appears to clean the contacts if you do it for a few seconds.

I'm not sure if the contacts are accessible to be cleaned with a spray cleaner. It may be a membrane type keypad, in which case we're screwed.

$*$*$ $20 Weak Signal Challenge Update $*$*$

One week has passed since the original posting of this challenge.
During that period, the Web page was accessed over 400 times
and several guesses made - all incorrect. It will be interesting
to see if signal processing techniques can surpass what the human
mind can do with a weak signal. So far, the "human" process seems
to be doing better then the "machine".

Here's a repeat of the challenge:
(ORIGINAL POSTING TO HAM GROUPS)

Do you think you're good at pulling out that weak CW signal?
If you have a web browser, point it at my home page for a
challenge that can put $20 in your pocket:

If you have a repeater in your town, try out the Ramsey 6M FM kit, it works great.
If you like sideband operation, I use a Yaesu 620B and loev it.

Not a whole lot of activity on six these days though, but in a few years it whould open up again.

I call a CQ every night, and quite often I get a surprise.

How About the Hamblaster?

The Hamblaster is a sound board that plugs into a PC 8 bit
expansion bus. Unlike conventional sound boards, it has a
Texas Instruments TMS320C25 digital signal processor chip and
high speed memory. It's not Soundblaster compatible.
^^^^^^^^
It also has an external 12 volt power supply connection. When
the computer is turned off the Hamblaster runs on the external
power. You can setup a filter or modem and if your computer
interfers with your rig, simply turn it off. The Hamblaster
will stay alive!

From a disk file, modems or filters are loaded into the memory
via the XT or AT ISA bus. Once they are loaded and configured
you can exit the control software and run other applications.
On the rear panel, the Hamblaster has a digital TTL I/O connector.
You can interface it to the "External Modem" connector on a PK-232.
It also has an analog audio input, output. To monitor your radio
through the Hamblaster filters, the input connects to the audio
output of a transceiver and the output can connect to a TNC and an
amplifier/speaker.

The current prototypes are full size PC,XT/AT compatible PC
boards using 16k bytes of static RAM. A new design will be
on a 3/4 size (Tandy compatible) and will include 64k bytes
of memory. To improve reliability and compatability we are
also adding I/O wait state circuitry

You can load a packet or RTTY filter, perform diagnostics,
display a digital oscilloscope or FFT, tune the filters using an
FFT, change the filter parameters and improve reception. The
Hamblaster will include a Windows for DOS software package
(minimum requirement: XT with 640k of memory and CGA graphics).
Most of the features, that are available in the Windows version,
will run on the DOS version.

The Hamblaster can interface to any packet modem and allow you to
load improved filters for RTTY, AMTOR, PACTOR, Packet Radio or CW.
Other filters will improve SSB and AM reception, copy Morse code,
display FFT's, decode DTMF and PL tones.

There is a company out there called ICE which i understnad makes filters
for BCI, wish I could give you more info on that regard.

If you want to roll your own filter, which is not all that hard to do
there is a very useful text on the subject which I swear by:

"HF Filter Design and Computer Simulation"
Randall W. Rhea
Noble Publishing, Atlanta

If you are not in a big hurry will send you a high pass design with a
notch in it for 1550 which will probably do the trick. In this day and
age the trick is finding good capacitors which can with stand high RF
currents since most people use transcievers and unwilling to open up and
modify their rigs to insert such a filter in the reciever's front end you
must build a filter which can withstand the rf currents (a couple of
amps) on transmit. I use the old transmitting type micas which I think
you can probably still get from Fair radio.

Good luck and let me hear from you on how you solve the problem
Also let me know if 80 meters i as low as you plan to go. A more
effective filter can be deigned if you are not worried about 160M
operation.

Guys! Help!
Thank God I did get a few compassionate souls who were willing to trade
me a few paltry dollars for the NOS and used tubes that I have.
But my wife is still threatening to divorce me unless I get rid of all of them,
and that is over 2000 tubes of various types.
PLEASE buy some tubes from me! I've only been married a few years, so
the idea of divorce isn't as appealing to me as it would if I were married 20
or 30 years!
All used tubes have been tested.
Send in your requests, and I will get back to you on prices.
You pay shipping. I pay for shipping boxes.
Thanks!
I feel better already.....

Hi,

I'm after a circuit design for a 5KHz receiver. It needs to be
a compact and low-power. It's detecting a 5KHz pulse that's
being generated from a very weak transmitting source.

Does anybody have such a circuit or is able to point me in the
right direction. My digital knowledge is good, my analog and rf
not so good.

Thanks in advance.

Peter.

Anyone know what a small board with two chips on it (and a few other components) would be that is mounted to the Digital B unit behind the right front of the front panel? I just got the 940, and I wonder what the board is. It seems that the board has a connector that "hangs" onto the memory bank switch connector and seems to disable the extra memory banks, only bank one is accessible unless I disconnect it.

Thanks for any help.

From: kbain@aol.com
Message-ID: <3iro63$4nq@newsbf02.news.aol.com>
Source record: 220098

My father has one of those and we finally found out that the memory chip in it can malfunction. If it has the optional chip allowing 250 mem channels, try this:
Remove the chip
Hard reset the radio (turn it on holding F (function) key down.
Power off
Replace chip
Power on and hard reset again
-- See if it works.

If you don't have a chip, do a reset on it anyway, you will loose your memory settings, but many times a hard reset fixes little malfuntions like that without sending them in.

Hope this helps!

If you have an HF rig and can get 5w out on 20 meters with it, try the $95 Ten Tec 6 meter transverter kit.

They do NOT recommend FM operation with it though, and of course, it's not ideal for mobile use.

I have a Kenwood TM941, and have been very pleased with it. It does very
well on all three bands. I needed th remote mount capability, and the
ICOM wasn't available. The 941's features are easy to use and fit my
needs exactly.

Kenwood is on third generation multi-banders, and ICOM entered the game later.
This may not necessarily be an indication of performance (as we've seen!).

This is my second response to your interest in the FT2500. In my first
response I mentioned the 5100 by mistake. I do own the 2500 and like it
very much. The 5100 is the radio with the intermod problem not the 2500.

1430. Icom 735 transverter jack

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-27 18:13:52 UTC
From: jdc@cci.com
Message-ID: <D4o7z4.5pD@sunsrvr6.cci.com>
Source record: 220113

I'm looking to use an ICOM IC-735 HF rig with a VHF transverter.
Is the transverter jack "bidirectional", that is, is it used for
receive as well as transmit? From the block diagram it looks like
transmit only. The manual mentions a 35 millivolt output level,
but not much else.

Have any of you successfully used it?

73...Jim N2VNO

1431. Schematic for KENWOOD TR-2500

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-27 18:21:17 UTC
From: <>
Message-ID: <D4o8BJ.47D@nntpa.cb.att.com>
Source record: 220114

I dropped my Kenwood TR-2500 HT on a hard concrete floor.
It still transmits fine, but it will not receive. I need
a schematic and board layout for it so that I can troubleshoot
the problem. The only place I can find one is H.W. SAM's, but
they want $30. I think that is a little much. I would be
willing to pay a reasonable copy and delivery charge if someone
has the schematic and board layouts. Can anyone help me?

Having sold my Icom handhelds, I have the following accessories to dispose of:

Qty 2 BP83 battery packs with ~1yr old 750mah inserts $30 ea.
1 BP90 alkaline or nicad battery case $12
1 AD14 charger adapter for use with battery packs & BP90 $12
with nicads, to allow charging from 12 source
2 CP12 filtered mobile power cords $14 ea.
1 OPC254 fused DC power cable $ 4
1 HM9 speaker mike $35
1 BA11 bottom cap $ 4

All in 'as new' condition. Shipping extra.
Will sell ALL for $125 to simplify my life.

Any interested contact me via email or 303/741-1503, anytime.

1435. ICOM IC-X2A Modifications

Newsgroup: rec.radio.amateur.equipment
Date: 1995-02-27 21:30:00 UTC
From: David.Edger@f239.n109.z1.fidonet.org
Message-ID: <943_9502272242@blkcat.fidonet.org>
Source record: 220126

Thanks for the posting. I am considering buying the X2A and
wonder if you could comment on the out of band sensitivity after doing
the mod you describe? I did a similar mod on my W2A and found that
sensitivity was quite good in the 800 MHZ range, but very poor in the
455-470 range. Since my interest is in that range, I was disappointed.
On the 800 MHZ band, were our local police operate, the W2A is
really a fantastic receiver. Beats any scanner I've used.
Thanks and 73 Dave

> number.

John,

Thanks for ur reply. True, an all mode HF transceiver with 6 meter module would be the ideal way to go. However, there are other considerations which makes a monobander more pleasing than one that can cover 160 - 6 meters (license class, pricing, do I really want an antenna "farm", interests, etc.).

The Yaesu FT-650 (12, 10, and 6 meters $1899.00 according to Yaesu) would be a dream. The Icom IC-575H (6 and 10 meters with FM/SSB/CW) is another and only costs $2460.00 (according to ICOM). For course there is KENWOOD with its TS-60S (FM/CW/SSB) 6 meter rig for only $1209.95 or its HF + 6 meter rig (the TS-690S) for $1759.95. Note: all these prices are regular prices from the Winter 94/95 AES catalog.

Tell me more about the TS-680S.

Thanks and 73

You might like to check out the article "Communicating Underground" (or some such) in the December 1994 issue of Electronics World & Wireless World. The article contains a transmitter and receiver operating at 874 Hz (not kHz, nor MHz, just plain Hz!) for cave work... It might help you along the road.

The AIP does *not* fix the severe intermod problems with this radio.
The radio also shares many of the other generic Kenwood faults such
as poor thermal design and baroque user interface. It will do a fair
job at 9600 in a quiet location though.

Yeah, I use it for all of my vhf/uhf stuff. It's output only; the output is
supposed to be 35 mv. but can vary from 30-80 depending on the rig.
You can use the "other" rca jack (the one with the short jumper) for receive.

Also, look at the accessory connector -- if you jumper the correct pin to +8v,
you'll disable the HF finals, which you probably want to do ;-) if you're
going to use a transverter (probably no need for two signals at once!).

Does anyone know the frequency range of the Kenwood TM-455a? I have a TM255A and was thinking of getting the 455, too. All the ads and spec sheets (and even the 455 manual) say that the 455a covers 430-440 MHz only. Is this really true or is it a misprint? If true, I can't understand why Kenwood would make an all-mode rig that doesn't cover the FM portion of the band!

Hi there,
I presently use an AEA PK-232 to decode and print HF WEFAX. I was wondering
if the M-7000 or M-800 works any better. I know that they do gray scale
where the PK-232 does not. If anyone has any experience with the 7000 or
800 I would be interested in hearing from you.

Thanks in advance for any info.

My budy uses a Icom belt clip which is spring loaded w/ aligator
teeth at the end. Fits just fine, needs no modification and will
tear your belt off before it lets loose. It's an accessory so you
should be able to find it no problem.

1468. HELP !! Gunnplexer video link...

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-01 01:30:45 UTC
From: mikey@gnv.ifas.ufl.edu
Message-ID: <1995Feb28.203045.6247@tower>
Source record: 220057

I am looking for help with a pesky problem using 10 GHz Gunnplexers for a wide-band video microwave link. I am having difficulty getting LOW (yes, that's LOW frequency) response. The high freq components look great, color looks good, and a multiburst test signal looks good out to over 10 MHz of video response. The problem is that the video sync tips recovered by the TVRO receiver at the receive end of the link are severely rounded off and there is severe tilt in the low frequency components of the vertical interval. Please reply to my personal e-mail address: Mikey@gnv.ifas.ufl.edu

The idea is to use a Gunnplexer at both link ends, and a standard TVRO receiver at the receive end of the link. Instead of the 18 - 26 MHz wide-band FM video signal coming from the usual satellite system LNB and downconverted to a 950 - 1450 MHz IF, the receive-side IF is derived directly from the mixer port on the receive Gunnplexer. With the two Gunnplexer freqs offset by whatever the desired IF is (in my case 10.250 GHz on one end, and 10.320 GHz on the other results in a 70 MHz IF at the mixer output port).

This 70 MHz FM wide-band IF can then be amplified and fed directly into the IF input of a standard satellite TVRO receiver, and the video recovered in the normal way by the PLL demod. The FM video bandwidth appears to be about right (20 MHz or so) when looking at the receive end g-plexer IF output with a spectrum analyzer.

The IF level at the g-plexer mixer output (after amplification) with a 70 MHz broadband amp is just the same as what would normally be seen when the receiver is looking at a satellite via the TVRO dish and the BDC.

The linearity of g-plexers is claimed to be excellent out to over 100 MHz or so, as long as the varactor voltage swing (0-20 VDC max) is not too close to either end of the varactor voltage limits.

The varactor is driven (FM modulated) by a video buffer amp to about 6 volts P/P. The modulating video from the buffer amp is decoupled by a 470 uF wet-slug tantalum, and DC bias is derived via a 10-turn pot to establish the center operating frequency of the Gunnplexer. The modulating voltage swings from 8 - 15 VDC at the varactor input.

Basically, we just turned up the video drive voltage until we had about the right (18 - 20 MHz) deviation. Because the video buffer/driver amp is very low impedance (a few ohms) we can look directly on the varactor input with a scope probe and see that the video looks perfect there.

A multiburst test signal viewed at the varactor input also looks excellent, with SUPER high freq response out to the highest multiburst band (10 MHz), and the sync and low freq components of the vertical interval also look excellent.

HERE'S THE PROBLEM...: the recovered video from the satellite receiver at the far end of the link has VERY BAD LOW FREQUENCY RESPONSE. The sync tips are severely rounded and low in amplitude, and the low frequency components of the vertical interval have severe tilt and distortion. The net result is that receivers / monitors on the receive end will not lock up and are too unstable to use. We thought the problem might have been a bad TVRO receiver, so other satellite receivers were tried and the result is the same. All the satellite receivers tried gave the same results. If any one has any suggestions to solve the problem it would be most appreciated.

By the way, the Gunnplexer mfgr claims that the frequency response of the gunplexers is essentially DC to over 100 MHz. As I mentioned above, the video modulating signal directly at the varactor input terminal looks excellent... good sync, good vertical interval integrity. The inclusion of a pre-emphasis circuit at the output of the video driver had no effect (good or bad) on the low frequency components. Anybody got any ideas...???

It has been suggested that the TVRO receiver circuitry which is designed to remove the effect of the 30 Hz dispersion (dither) added to the signal at the satellite transmitter is the culprit, because we are not adding any dither/dispersion and the circuitry doesn't behave properly. I am also told that the 30 Hz dither was only required for a few years, and is no longer required or used, but I am unable to confirm this yet.

Please reply to my personal e-mail address listed below...

1469. FT530 (Yaesu HT) operating question

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-01 02:36:31 UTC
From: FPNM14A@prodigy.com
Message-ID: <3j0mjf$i9o@usenetp1.news.prodigy.com>
Source record: 220076

Anyone out there in netland know the key stroke sequence needed to make the Yaesu FT530 HT receive the AM aircraft band?

Per the book, I have tried FM>0>FM>VFO key sequence to put the VHF section into the "AM ON" mode. This works as advertised. However, any frequency below 130.00 mhz is rejected as an error. In addition, even when the "AM ON" function is active, the receiver still receives FM. It acts as if only the display has switched, not the receiver.

Anybody know what I am doing wrong?

Jim,

Yes the transverter jack is bi-directional. The output is only
30 millivolts, with no way to increase it from inside the radio.

That was me. I put them on any HT I buy. I use the HT220 clip. On
the older Icoms, the holes line up. On my FT-470, and I assume on
the FT-530, you have to drill and tap new holes. It's worth the trouble
because the darn radio won't come off your belt when you don't want
it to.

Gary

1476. Re: FT530 (Yaesu HT) operating question

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-01 14:40:20 UTC
From: rodell@netcom.com
Message-ID: <rodellD4rnF8.GxF@netcom.com>
Source record: 220136

You first need to open up the receive. To do this, turn off the radio,
and hold down the <Up> and <Down> /*MHz*/ keys and turn the radio on.
This will enable wideband receive. Note: You will now have to enter
leading digits for frequency selection.

FM can be heard while in the AM mode through a 'slope detect' method. It
is not unusual and does not mean you are not working in AM mode. In
fact, you can hear AM in the FM mode, too, but the quality is terrible.

r.

One of the neat new features of this new handi is it's ability to clone itself with another 51R.

Since the upload/download protocols are in ROM and the cable is nothing exotic, why not be able to shuffle the data to/from our PCs? Does anyone already know of a way to do this or already looking into it (I'm not into re-inventing wheels)?

Hoping to make a good radio even better...

: PLEASE buy some tubes from me! I've only been married a few years, so
: the idea of divorce isn't as appealing to me as it would if I were married 20
: or 30 years!

Oh that's very interesting. One of the main reasons we never got divorced
is that neither of us could face the paperwork involved. We assumed
it got *more* onerous with 20 - 30 years to sort out. Plus we
could never decide on who should have custody of the rabbit.

Now that your posting has revealed it is actually easier after 20-30
years and now that the rabbit has passed away, I can see a way to
expand my collection into the living room and kitchen - as well as
the other rooms I have taken over.

Many thanks for this useful information.

Hello and thanks for reading. I am hoping to get back into hf within a year and am considering the ft-767gx. I need to know a few things. 1 is, can a voice synth be added to the rig? My wife and I are both visually impared and this would be of great help. 2 is, how many extra band modules can be added at the same time. If I remember right, you can add 6, 2, 220, 440 and 1.2ghz. Can all these extra modules be inside the rig at the same time or do you have to pick and choose for lack of space? Thanks for the help. 73 de Gary/wr1u in Portsmouth NH.

Source record: 219996

Thanks to Mike for his correction on volatge reading during TX.
- (I tried to email you Mike but my email keeps bouncing back!)

I found another *error* in the manual regarding DTMF memories.

I can not edit memory 9 - but I did notice that it stores
the *last* DTMF tones heard over the air. Used with Tone Squelch
it could be a simple way of rcx messages from non FT51 radios
and/or operators who can not be bothered with those two key strokes
to send one alpha-character.

eg.

144750C1830 == See you on 144.750 at 1830 Hrs

Has any tried cloning a FT51 with a sampled clone ouput
via their digital sound-cards? - despite getting a lovely recording
of the clone output my FT gives a clone error each time I tried to
input the sample.

I had visions of sending my FT memory dump over the inet.

Who knows, maybe I could be the first one to create a FT51R virus?

From: lubecke@tumbler-ridge.caltech.edu
Message-ID: <3j2srk$ib2@gap.cco.caltech.edu>
Source record: 220000

I need some advice:

I would like to buy a radio that I can easily carry with me while on extended hikes. I would like the radio to have broad reception so that I can tune in any local forestry, search & rescue, weather, or similar services. I would like one that can transmit reasonably well in a forested mountain area to reach "somebody" in an emergency.

I've heard about the Icom 2sra, but they are rare and expensive when new, and I haven't found one used.

I found a deal on an Icom 4sra, but I've heard that UHF isn't suited well to forested or mountainous terrain.

IS THIS TRUE ABOUT UHF?????

I've also heard that some 2m and dual-band HT's can be modified to get a lot of out-of-band reception.

WHICH RADIOS DO THIS???

HOW BROAD IS THE RECEPTION???

HOW SENSITIVE ARE THEY OUT-OF-BAND AND ARE THE FREQUENCY STEP SIZES CORRECT???

DO I WANT A BATTERY FOR MAXIMUM POWER OR AM I BETTER OFF WITH ONE THAT PROVIDES MAXIMUM OPERATING TIME???

Any advice on alternatives to what I've mentioned would be appreciated as well.

Victor Lubecke

That sounds simple enough. Just run 12 volts through a 7808 or 78L08
regulator, use the 8 volts to cut out the finals, and see if 35 millivolts
will run a Ten-Tec 6-meter transverter without extra amplification.

1490. Kenwood TM-742 models in Japan

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-02 02:30:42 UTC
From: bobw@col.hp.com
Message-ID: <3j3aki$h1v@nonews.col.hp.com>
Source record: 220004

On a recent trip to Tokyo, I noticed that the ham radio stores
there carry band combinations of the Kenwood TM-642/742/942
triband transceiver that are not available in the U.S.
For example, I saw a 50 Mhz/430 MHz version and a
430 MHz/1.2 Ghz version (don't remember the model numbers).
I know Kenwood has received requests for additional model
configurations in the U.S. but has declined to do so.
For band-intensive installations in the U.S. with 2 of
the radios, it would be nice to not have duplicate 144 Mhz
bands.

1491. Re: Info needed on Standard C5718DA

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-02 03:18:13 UTC
From: olken@mendel.lbl.gov
Message-ID: <3j3ddl$ght@overload.lbl.gov>
Source record: 220008

I have seen one of the rigs at HRO. As I recall, the mike is a little
smaller than the smallest HT's, (eg. Yaesu FT-11 with small battery).
I found the buttons a bit small for my (very large hands) -
a woman would probably not have a problem.

I have attempted to use an FT-11 in the car (with a mike)
and do not recommend it - too clumsy.

The C5718A offers considerably more power than an HT and
presumably much better intermod rejection.

John,
I am also interested in save the FT51R's data to a pc. If have any
success, please post the results. If the data is transferred as true
audio (not just hight data rate that sound like audio), such as DTMF,
you could try using a VCR to record the sound. VCR's have a much more
stable frequency respone, and therefor may provide a better test.
If the data transferred is a digital signal, and someone can provide
some format specs, I would be happy to try building the reguired
hardware interface.

Tom,

I have just found out, through reliable sources, that a company (not the OEM) is currently working on a PC interface for the FT51 and others. It will sell for approximately $30 US and will be announced at the upcoming Dayton (Ohio) hamfest. The interface will consist of a cable to connect the FT51 to the computer serial port, and the accompanying software that will enable you to save and restore FT51 data. The package will also include frequency data for 10 popular US cities.

I hope this information is of some use to you.

: Does anyone have any INFO on how to mod the Alinco-DJ180 2m HT,
: I would like to extend the receive range.
: Thanks in advance!

: Serge
: serge@optima.itep.ru

The 180 comes standard with extended recieve, at least mine did from 130 to 170 - I need some help geting extended transmit.

A long time ago I cut the wire that extends down around the bottom of the case and when I reset the radio, I could only transmit and recieve in the HAM band (144 - 147)
Extremely disappointed I ignored it for a month or so until one day I was pushing buttons at random
when I had extended transmit and recieve all the way from 130 - 170. This served me great - especially
the many times the battery went out in the Sherrif`s radio I was carrying.
Anyway - About a month ago I stupidly reset the radio again - besides losing all the channels,
I can't figure out how to get extended transmit back again - does anyone have any ideas
HELP!!!!

Cutting the wire is not hard but the diode removal is hard (very small
part you need a small iron with a fine tip and some good solder wick.
Getting the sheild off the processor is not that difficult. I would
recommend that you refer this to someone who has some experienc with very
samll parts and more spaciffically surface mount componansts.

Deffinatly not your first soldiering project.

From: falcon@frisbee.sonoma.edu
Message-ID: <3j5q5j$ka0@nic-nac.CSU.net>
Source record: 220031

I just recently acquired 4 Aerotron Mobile radios. These are those heavy duty things that you install the
transmitter in the trunk, and the control head goes up front. I've been told they handle about 75 Watts
(I'm not sure I want 75 Watts going down a power line all the way from my engine to my trunk but that's another
story.)

Problem - these things came with nothing - no connectors, no instructions, no keys (already dealt with).
I've already located some crystals that will work, but I need the control cables that go from the head to the
transmitter. It looks like a 36 pin Molex Connector, but the pins are too small. I also need any information
regarding the operating frequencies, the crystals in there now are 170 Mhz, I want to know if the radio can handle
144-156 Mhz. I think I can handle the rest by myself.

Thanx in advance EZ Writer

Hello all-

I am sure that this has been discussed before but...

I am considering buying a new dual-band HT and I am deciding between the popular Yaesu FT-530 and the newly introduced FT-51R.

I am most concerned with intermod issues and the ease in which the HT can be connected to a packet TNC.

Any and all opinions would be appreciated!

Thanks in advance.

Ben,

Just press and hold the B and # keys while turning on the radio.
Then continue holding these keys until 2 seconds after the display has returned to normal.
The IC-Z1A will have expanded receive.

David,

Bob heil made a voter for one of his systems. As i remember it
could do 3 receivers. I believe it was written up in Ham radio magazine
in the mid 1980's. As you may know Ham radio magazine is out of print.
But CQ Magazine purchased most of the Ham Radio magazine group.
You may have some luck there. Also have heard that the voter made by Doug Hall is very
good.

1522. Comparison of used HF rig types - Need information/recommendation

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-03 15:33:46 UTC
From: mikef@microtech.com
Message-ID: <3j7csq$hna@kadath.zeitgeist.net>
Source record: 220087
Cross-posted to: rec.radio.amateur.equipment,rec.boats

Hi all,

I'm a Tech+ (my wife is a Tech) working on my code to get my general and its about time we start thinking of an HF rig. I was hoping someone that is more informed than I am could give me a quick run-down of available used (read cheaper) rigs. We're looking for something that can be easily moved between our boat (where we live) and our cabin (where we spend our weekends). I'd prefer something as solid-state as possible. Since I'll be using my backstay as an antenna on the boat, should I get a radio with an automatic tuner?

Can anyone suggest a good rig? I hear of IC-735 and IC-725 rigs fairly often. How about similar Kenwood models? Any others I should look into?

Any pointers and/or information would be really appreciated.

What are the correct negative voltage values which are produced by
the DC/DC converter board which supplies minus voltages for the op-amps,
etc in the ICR7000. This particular module has been a sour point for years,
causing problems that point everywhere but to the converter. Until I get a
service manual, what should the output voltages be from the converter?
Many thanks.

The unit is made for Radio Shack by Maxon. It is well built. There
are no expanded frequency mods available for it *by design*. It's
not a wideband scanner, can't be made into a wideband scanner, and
that's on purpose so that it doesn't suffer the ills of a wideband
scanner.

[Article crossposted from rec.radio.swap]
[Author was Kevin C. Hess]
[Posted on 3 Mar 1995 18:07:32 GMT]

I'm looking for a copy of the schematic/service manual for a UNIDEN FORCE Commercial radio, Model APU 44K (UHF Crystal radio). I'd like to convert it for use on the amateur UHF band. I'll pay all associated costs. If you can't find one, but know the address/phone for Uniden commercial service, I'd appreciate a post here. Thanks much!

Optionally, I have access to HP service manuals. I can offer to trade a xerox copy of a UNIDEN manual for a copy of an HP manual.

-Kevin

The statements/opinions expressed here are not necessarily those of the Hewlett-Packard Company. HP paid a research firm millions of dollars to get their own opinions, and has made it clear they do not wish to share mine.

Sure, no problem. Just replace the custom microprocessor with one
that has the code allowing 800 MHz operation. Now populate the 29
surface mount parts that implement the 800 MHz receiver that are
missing off the circuit board. Viola, you have 800 MHz coverage
back.

1537. Kenwood TS-530S needs help!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-03 21:44:06 UTC
From: ham@wam.umd.edu
Message-ID: <3j82j6$rrd@cville-srv.wam.umd.edu>
Source record: 220011

TS-530S woes and the like:

1) Can get no ALC deflection at all on 10 meters.

2) Radio only putting out 60 watts on 10 meters.

3) More importantly, only DRAWING 210 ma while pulling
well over 250 on ALL other bands.

So basically, after re-aligning the radio, and using the
SG switch to my advantage, and feeding the marker back
into the receiver to peak the coils, and then using the
method discussed in the service manual to re-align the
drive coils, I STILL get no deflection in ALC mode.

I suppose SOMETHING is weak in there on 10 meters. I
put in a new set of tubes and they act identically.
So what is wrong here? Is my 12BY7A driver tube a bit
weak up around 10 meters? It begins to degrade on
12 meters and by 10 meters will provide no ALC, and
only 210 ma of plate current.

Second problem is that I was aligning the 1.8 MHz antenna
coil and it broke (although only the top part of the
powdered iron "can" broke off). However, adjustment of
this inductor had previously done NOTHING. Strangely,
it seems to have no problem, even when broken!

Any guesses on either of these problems? If the coil
need not be replaced, then GREAT. Anyone have any
guesses as far as the 10 meter drive problem is con-
cerned?

Well worth the sale price...Hell, it's well worth full price. This is a great
rig made by Maxon. The fact that is has no ability to receive modification
shouldn't scare you away, it should bring you into the store. This rig has
such a tight front end, you'll have the best image rejection of anything
I've yet seen. My wife uses one, while I use an IC24AT. The Rat Shack
404 is much better for intermod rejection

Yep.. well, service plans are a big thing at the shack. $60/hr isn't all
that great. RS has a $40 flat labor charge for our HAM xcvrs, plus parts
of course. For some stuff, I just can't see buying a TSP, but on the ham
radios and other communication equipment which you carry around with you,
need new batteries for all the time, etc, it's really just silly
not to get the plan.

Steve,

This does not happen indside the radio, but right on the front face of the radio
The receive audio is loud enough that the internal mic picks it up and you get
feedback. The fix is to use an earphone when doing full duplex. There is no command
for the receiver to be shut off during your transmit.

>anyone who has any information or experience with with it?

You have a bootleg CB amp. It's probably nasty as all get out, spraying
RF over several octaves, and of course only wants about 4 watts drive.
It's basically a ripoff of a wideband amp in a Motorola app note. A good
bandpass filter on its output, and some tinkering with the bias, may result
in a fairly clean little utility amplifier if you keep the drive low.

If not, at least you got a cabinet and some parts for your money.

I kind of disagree, I just bought a Kenwood TS241A from AES and paid $319 and got a $30 rebate from Kenwood. Radio with shipping came under $300. If and when the RS goes on sale will be around $300. The question remains, is this radio better than a Kenwood (in particular the TS241)????

Thanks to all who responded for my plea for help in trading my tubes for small bits of cash.
My wife thinks I am golden, and all is right with the world.
Also, I appreciate the various advices given by you married guys out there. Some were very funny.
HOWEVER, I still have some tubes left (actually, most of the original stock), so please don't hesitate to send in your requests.
Also, I have a Plumbicon TV Camera tube, if anyone knows who could use one.
Also, have a couple black and white TV picture tubes, 12 inch. Someone need one?
Thanks for everyone's participation.

1561. TV/Phone Interference Problems:STATUS

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-04 22:55:46 UTC
From: dmassarik@aol.com
Message-ID: <3jar5i$7fr@newsbf02.news.aol.com>
Source record: 220033

Thanks to all,

Several weeks ago I posted a note concerning RFI problems I was having with my neighbors illegal 100 W Galaxy Turbo CB. I received over 30 email messages with comments and recommendations. Net-ers recommended specific (in some cases ASCII drawn circuit diagrams!) grounding methods for the radio, antenna mounting corrections, shielding methods for my TV, phone, stereo, computer gear and FCC complaint procedures.

Based on the info I gained from your support, I was able to successfully convince my neighbor that:

A) he was operating an illegal rig and at risk with the FCC if he did not cooperate with me.
B) he should sink some copper rods in the garden and ground his radio.
C) Properly ground and position his attenna.
D) Only operate in "high power" mode during the hours 3am - 6am.

Items B and C greatly reduced the RFI problems in my home. Assuming he sticks to his curfew in item D, I will consider the matter happily closed. If he violates his agreement with me, I notified him that I will rally the neighbors, community association, and the FCC against him.

again, thanks for all the info, knowledge is power (or in this case shielding),
david

I have two 440S/AT's - they are great - work with poor antennnas. Friends have 450's with same claims- great mobile, same in house. Tuner does NOT work on 160 but does great job. My opinion is that the 440 is no better than brand X without the tuner, and better than anything it it's class with one.

From: MJ Audette <mjaudette@delphi.com>
Message-ID: <R84YFvL.mjaudette@delphi.com>
Source record: 220037

If you're desperate to get on top band, I have a better option which might prove more efficient.

I use a modification of the G5RV dipole as a compromise antenna. Instead of using 3 half waves at 20 meters, use 40 meters. Two radiating elements 99 feet each (mine is hung as an inverted v from a 60 foot tree). Use a 3/4 wave 300ohm section (at 40 meters) and then take the 300ohm line to an F-connector chassis socket (from Radio Shack) into RG6u from rad shack (fine up to 100 watts). Run this into an unbalanced tuner, and it will work all bands 160 to 10m with pretty good efficiency. And witht he tuner, you won't have to worry about bandwidth.

If you lack real estate ot a high support, bend the ends of the ant. back upwards.

1571. Using repeaters...

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-05 04:45:24 UTC
From: cfugard@sdcc15.ucsd.edu
Message-ID: <80772@sdcc12.ucsd.edu>
Source record: 220038

I am wondering just what happens when one talks to a repeater using a handheld, say 2 meter, radio? Also, what ranges of communication are achieved when talking through a repeater? It likely varies, but is there a way to use a handheld 2 meter radio to talk for hundreds, or even thousands of miles??

Thanks
Chris

1572. Re : Omni VI vs. 950

Newsgroup: rec.radio.amateur.equipment

Well, there's one thing I can say about both: they're EXCELLENT rigs. Kenwood sells many more of the TS-950 than Tentec ever will with their Omni VI, but I feel that they should both be carefully evaluated. There's one thing I will say though..In my experience with the TenTec rigs...one will never be disappointed. Their American-made equipment is some of the finest in the world. 73's!

Gary,
I am an owner of the FT-767GX and like it alot. It will take up to 3
modules at one time. I don't know of a 1.2 ghz module that you mention.
Also, I do not know of a voice synth that is available. The rig is very
well laid out and I would suspect that memorizing the positions of the
knobs would be not too difficult. However, without the voice synth
operating with limited sight would be a challenge. Good luck. Alan WB2FZC

>I am assembling my HF station and need some advice on my grounding system.
>I have an 8 foot length of aluminum angle stock that I would like to use as my grounding Bus Bar.
>Is aluminum suitable for this task?

Aluminum is not the best choice for several reasons. Of course aluminum is not as conductive as copper, but it is likely "good enough" for routine grounding. More serious is making connections to aluminum. Because aluminum almost instantly forms an insulating aluminum oxide coating on it's surface, it's hard to get a reliable high conductivity contact. There are compounds, Penetrox, NoAlox, etc, that can be used to protect the connection, but special methods must be used to assure an oxide free connection in the first place. You may also suffer from dissimilar metals corrosion when connecting copper wires to aluminum. There are special transition connectors available to help with that problem.

You can't solder the connections if you want lightning protection. The NEC requires a mechanical bond because solder can melt and fail under lightning surge currents. Aluminum itself has a low melting point, and can also fail under lightning surges. More serious, use of a bus bar architecture is a *very* bad idea since it will surely result in unintended ground loops. Instead you should practice single point grounding. Instead of a bus bar, consider using a small heavy copper plate as the terminus for all your equipment grounds.

Gary

Subject: ham radio wanted

>>i am a 14 year old kid who does not have a lot of money and i would
>>like to get into the ham radio hobby for as little as possible.

Ask at your local Amateur Radio Club! They'll probably have a "Under-18"
age category for Membership...and they just might have a loaner or two
available to Members.

If not - someone in the group will be willing to assist you in used
equipment purchases!

Thank you much to all of you who reply to my posting. In summary the TS450S is not a better radio that another brand in the same price range, however the TS450S-AT outperforms other radios with tuner in the same price range. I ordered a TS450S-AT on Saturday ($1229 - $70 rebate from Kenwood= $1159). Also thank you those of you who offered me radios for sale, I decided to buy new.

73 de Rafael (KE6JSR)

PS: I purchased the radio from Texas Towers

Some stuff deleted for brevity...

>You can't solder the connections if you want lightning protection. The
>NEC requires a mechanical bond because solder can melt and fail under
>lightning surge currents. Aluminum itself has a low melting point, and
>can also fail under lightning surges. More serious, use of a bus bar
>architecture is a *very* bad idea since it will surely result in unintended
>ground loops. Instead you should practice single point grounding. Instead
>of a bus bar, consider using a small heavy copper plate as the terminus
>for all your equipment grounds.

Good advice Gary, but what is the difference from using a bus bar and using a small heavy copper plate? Can you not develop ground loops that way also? And how would you situate the copper plate? In the ground? Connected to a run that is grounded?

I have not seen any documentation that alludes to this so I am interested in the theory behind it. You got any more info for us? I am genuinely interested since I use the bus bar architecture.

Peter:

You're talking KILOHERTZ here, right? 5000 HZ? Like, audio frequency?

I was playing with this last week, being interested in listening to distant lightning.

Here's what I did. I bought a ferrite rod from Amidon. (They advertise in ham magazines. The rod is 7.5 in long and 0.5 in in diameter. I wound it with about Two layers of about 18 guage wire (1.0 mm dia ?)m `. or about 500 turns. I used a capacitor of about .045 mfd connected in parallel with the coil to make it resonate at about 7.5 Khz. You will want to use a little more capacitance to get it to resonate at 5 KHZ . I connected this to a 15 ft long piece of skinny coax and then to a phono plug. I plugged this into my battery operated tape recorder. I could hear the signals from distant lightning just fine.

I did my recording "out of town", at least a half mile distant from a small power line. The big interference in this band is powerlines. If you are a city dweller, you'll have to get way out of town to play with 5KHx emag.

Have fun, and let me know what you get to work.

Hi,

About 2 weeks ago I posted a message saying I had a stuck mike problem on my Alinco DJ-G1T radio...Thanks for several replies, ranging from condensation/ice in the mike jack to a poorly wired mike, etc...The mike was a Radio Shack speaker mike...

It turns out that the problem is RFI from the antenna being picked up in the mike cord...

I find that if I wrap the mike cord 1 time around the top 1 inch of the antenna (rubber duck), it
continues to transmit AFTER the PTT has been released...I can even duplicate the problem by holding the mike cord against the antenna...This is a very satisfactory explanation to me
because I had the radio in my breast pocket of a jacket with the antenna and mike cord running
out parallel to each other...The pocket was zipped shut except for enough room to stick the antenna/cord out...

I found the problem after having the same stuck mike problem when trying to use my radio with a newly purchased Baycom modem...The Baycom comes with 3 feet of telephone cord to use to connect the modem to the speaker/mike jacks of a radio...The docs with the modem say there may be a possibilty of RFI getting into this portion of the wiring... Sure enough, there is...

Date: 1995-03-06 03:01:40 UTC
From: cmoore@sedona.intel.com
Message-ID: <3jdtuk$atn@chnews.intel.com>
Source record: 219904

Sombody was looking for the mod to open up the Alinco DR-570 the other day. I just opened up mine and it is cutting one wire. Remove the top cover with the front panel facing you. At about the "a" in transceiver written on the top of the front panel there are three solid jumper wires with white insulation parallel to the front panel. Cut the left most wire. When you power back up hold down the function switch. The unit will reset to open mode and all memories will be lost. It will now cover aircraft and some higher UHF stuff that nobody is supposed to listen to.

1596. Anyone have info on a Henry 2k2 linear amp?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-06 07:16:09 UTC
From: jelson@condor.cs.jhu.edu
Message-ID: <3jecrp$35e@condor.cs.jhu.edu>
Source record: 219985

Hello,

I recently came into possession of a very big, very old HF vacuum tube amplifier which I'm told works (though I haven't verified it yet.) I'm not 100% sure what model it is, but I think it's a Henry 2k2. I have some questions about that hopefully some of you can answer!

1 - Does anyone have any specs on this monster, or even a manual? I'd pay for shipping and even a bit for your time if you have one, and can photocopy it and mail it to me.

2 - The unit has 3 unlabeled connections on the back: an RG/8U plug (normal antenna feed line), a twist-on RG/58 coax plug (just like thin ethernet), and something else right next to the RG/58 that looks like it could be an RCA coax jack. I'm guessing the RG/8U is the output, and the RG/58 and RCA are both inputs. The problem is, my radio only has an RG/8U output -- can I just find some piece of metal that converts from RG/8U to RG/58, or will that not work for some reason?

3 - The amp doesn't have a normal AC plug, but a larger, circular plug with 3 or 4 twist-on prongs. I think it's a standard 240V plug, since I've seen the same thing on some old computer mainframes. Where could I go about finding a 120V-to-240V converter for this beast, allowing me to plug it in in my shack which has only "normal" 120V plugs?

If anyone has any info on this thing, please either post it or email to me at jelson@jhu.edu. The guy who gave it to me said "she's a good amp", and I'd hate to see it go to waste.

73,

Jeremy

>>

>This does not happen indside the radio, but right on the front face of the radio
>The receive audio is loud enough that the internal mic picks it up and you get
>feedback. The fix is to use an earphone when doing full duplex. There is no command
>for the receiver to be shut off during your transmit.

>73' Gary Fiber

No Gary, audio is somehow coupled (RF or AF I don't know how) inside the
radio. I know this since I have used a separate earphone & turned the volume
all the way down on the IC-32AT! There is stillfeed back on the crossband
monitor. The feed back goes away only when the radio is taken out of split
mode (ie tx and rx on x-band's input freq).

I've even taken the x-band repeat mod out of the IC-32AT, thinking that this
had something to do with it - but no luck. The manual mentions possible third
harmonic feedback when in split mode - happens no matter what 440 and 2m freqs
I use.

I'm at a loss, unless someone with one of these radios is familiar with
the problem and a possible fix?

Steve.

1598. Need SSTV/FAX decoding device...

Is there anyone who has replaced those diodes on the front end
of either of these common HF-rigs with good PIN-diodes? There
was an article on 12/94 QST but I can't get a copy. So please
tell me about Your experiences! I'll also like to know which
are the best available PIN-diodes, are HP 5082-3081 good one?

I was told, that they cost abt. 4$ here, so is it worth
ordering those from U.S. ?

I also would like to know any other tested modifications
to both rigs! (No, I don't need any general coverage TX!)

Pete

1609. RF feedback in TS930 HF transceiver?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-06 17:25:24 UTC
From: mac@cis.ksu.edu
Message-ID: <mac.794510725@depot.cis.ksu.edu.cis.ksu.edu>
Source record: 219995

A local ham has been plagued with RF feedback, especially on 80 and 20 meters, in his TS-930 HF transceiver for years? He even borrowed a second rig to compare with his, and it, too, had the problem, so he concluded maybe his problem was caused by something wrong with his antenna or maybe with his ground or maybe ....

He sent his rig to Kenwood TWICE (to both the "east" and "west" service centers) without any luck whatsoever. Then a local radio shop solved his problem in almost no time at all.

Have other hams had feedback problems with the TS-930?

>
>I have not seen any documentation that alludes to this so I am interested in the theory
>behind it. You got any more info for us? I am genuinely interested since I use the
>bus bar architecture.

Jim, I'll let you in on a dirty little secret, you can't eliminate
ground loops, but you can make their effect almost arbitrarily small.
To really eliminate ground loops, you'd have to bring all your ground
connections to a single geometric point. Since that's an idealization
not achieveable in practice, you can't eliminate ground loops. But,
if you crowd your ground connections as closely together as physically
possible, observe symmetry in the connections, and if you use a highly
conductive material for your common point, you can achieve in practice
something close enough to a real single point ground that it will suffice
even under the 8,000 ampere surges of a lightning strike.

I'll let you in on another dirty little secret, there's no such thing
as "ground", but if you're clever you can simulate ground closely enough
to suffice in practice. The problem with the bar architecture is that
different pieces of equipment *partially* share the same current paths.
The voltage drop caused across the combined part of the path will modulate
the potential seen as "ground" by equipment further out on the bar. Thus
two pieces of equipment connected to different points on the same bar won't
have the same common potential. That'll cause ground loop currents to flow
though other connecting cables between the boxes.

I had a Brit instructor for a class once. He was explaining the inner
workings of a piece of broadcast equipment. He would say, "We Earth

this", and later would say "we ground that". Being the smart-aleck I often am, I had to ask, "What's the difference between Earth and ground?" He answered quickly, "Around this $#%& place about 5 volts." That's a ground loop.

The clever way we solve that problem is to make sure that any paths that are common for multiple pieces of equipment are *fully* shared. Now *all* pieces of equipment see the same potential modulation by the currents flowing in the common path, so they all see the same "ground" potential. We don't particularly care exactly *what* that potential is, it's good enough that it is the *same* potential for everybody. A fundamental electrical law says that no current can flow between two points of equal potential.

So it doesn't matter *where* the single point connection is made just as long as it's only made at one point. The usual way we do it is to create what's called a "ground window" near the equipment. *Every* equipment "ground" is connected to this one point, and only to this one point. Now the *Earth* connection is made from this point to the real Earth ground field, IE the rods, water pipes, etc, and no other Earth connection path is allowed to the equipment except from the ground window. Now a strong common current can flow from the ground window to the Earth terminus, and a high potential vis Earth may be created by the potential drop across this connection, but *we don't care* because each piece of equipment still sees the *same* common potential, that of the ground window.

Now it must be noted that we can't *just* treat "ground" wires. We have to deal with *every* wire that comes or goes from the equipment. That means antenna feeders, rotator cables, power cables, telephone cables, even CATV cables if you have that in the shack, must *all* connect to the ground window. In the case of "hot" leads, they must connect via a *suppressor* rated for that service. So no matter what path Mr. Lightning tries, he always sees the same potential, or a potential within the ratings of the equipment, across any part of our station. Same potential, no current flow, no damage. All of this applies equally to Mr. Stray RF. Lightning *is* RF and the same measures that deal with it will also deal with our RF "grounding" problems.

Note: deviate just once from the ground window rules, and lightning will find you, and turn your equipment to silicon scrap. I made the mistake of running an extension cord for a "temporary" hook up once that didn't go first to the ground window. Cost me $10,000 in repairs. The tame electrons in that cord whispered "ground loop" to their wild brothers in the sky, and BLOOEY, all gone.

BIG ELECTRICAL SAFETY NOTE: Use of the ground window technique will defeat any GFI circuit breaker protection you may have. It is *essential* that you use individually GFI protected power receptacles on the equipment side of the ground window to restore GFI protection. Don't neglect this, especially if your

shack is in a damp basement. It's no fun to shake hands with
Reddy Kilovolt.

Drill the hole! Drill the hole! Drill the hole!

Have I mentioned you should drill the hole? :-)

Glass mounts exist. They don't work particularly well. Even a mag mount will generally work better (though that darn coax keeps getting crimped.) The best solution is to drill the hole. (Have I mentioned that before?)

lubecke@tumbler-ridge.caltech.edu wrote:

: I found a deal on an Icom 4sra, but I've heard that UHF isn't suited
: well to forested or mountainous terrain.
: IS THIS TRUE ABOUT UHF?????

In my experience in Colorado, UHF does not reach around corners and into deep valleys as well as VHF. Generally, it seems that you're more nearly either in or out with UHF. It is a lower-noise band, though. And, since a UHF halfwave antenna is shorter than a 2M halfwave, you may in some cases be able to get a better signal into a repeater with a reasonably sized flexible antenna (UHF halfwave vs. 2M "rubber duck"). For example, the Diamond RH77B is an excellent UHF antenna and also very reasonable to leave on the HT while carrying it around.

In any case, if I had to pick one band it would most definitely be 2M, given where I live and what I want to do with it.

: I've also heard that some 2m and dual-band HT's can be modified
: to get a lot of out-of-band reception.
: WHICH RADIOS DO THIS???

Most every one except for the Radio Shack's HTX 202.

: HOW BROAD IS THE RECEPTION???

Generally covers about 130-170 VHF and at least 400-480 UHF.

: HOW SENSITIVE ARE THEY OUT-OF-BAND AND ARE THE FREQUENCY
: STEP SIZES CORRECT???

Depends on the radio, of course. Some of the older HTs can be somewhat deaf out of band. The newer ones work reasonably well, at the cost of poorer spurious signal and intermod rejection.

: DO I WANT A BATTERY FOR MAXIMUM POWER OR AM I BETTER OFF
: WITH ONE THAT PROVIDES MAXIMUM OPERATING TIME???

Now that's an interesting question. Location/elevation and antenna (in that order) will do the most for improving your signal. Higher output power only helps in marginal conditions/locations, after you've obtained the best location and antenna. I carry a battery for 5 watts, but it generally doesn't do much good. It may make an unreadable signal barely readable, but it won't turn a bad signal into a good one. It's sort of like the last-ditch effort to get a readable signal out. You need to decide which is most important to you, max power or max operating time.

As far as antennas go, a telescoping halfwave (like the AEA Hot-Rod) or some other kind of halfwave is a major, major improvement over a rubber duck. It's almost essential to have one along in your bag of tricks. I like the telescoping antennas better than, say, a roll up J-pole because you can move around and find "hot spots" easier.

If you really want something compact, look into buying a Kenwood TS-50s
that is about as compact as it gets. Only problem being, they are
expensive and difficult to find used. I have a Kenwood TS-130s.
Although, I have never used it on my 16 foot ski-boat, I would imagine a
rig of this size and price would work well. They usually go for $400 -
$450 used. Drop me a line if you are interested in purchasing it.

From: blondell@ripco.com
Message-ID: <D51oMo.73w@rci.ripco.com>
Source record: 219906

I went and got the Standard 440/1.2 and love it. With the keyboard and single diode mods, I get two bands on 440 (350-400 and 400-470) and four bands on 1.2 (820-900, 900-970, 1220-1300 and 1300-1350), these were the working ranges not the displayed ranges. Transmit ranges are 410-472 and 1220-1300, the other ranges do not transmit. The bad side of the radio is that the antenna is a bit flimsey and breaks easily, and it could use more memory. on the up side it with its twin gives you four bands with two radios. Mods available on oak.oakland.edu /hamradio/mods. Use the ones for the 144/440 unit.

Steve,

Well I guess I am at a loss here to. All my years while at Icom (5) have not taught me anything about the 32AT. I am quite surprized this is happening, and not caused by the front

panel coupling of audio.

Most generally the addition of the earphone would solve this type of trouble.
The addition of a diode should not cause this as is the crossband repeat modification.
Interesting problem... Oh yes the other problem of the squeal was talking about a 440 frequency
being 3 times the 140 MHz frequency.

> KE4VYZ
>
Travis,

Do the following.
turn off the 2GXAT, now press and hold the Function, Scan & Dupe keys.
Turn on the radio and wait for 2 seconds after the display has returned to normal
before releasing the keys. Now the radio should receive from 136 to 179 MHz.

Just acquired a midland 13-513 220 rig at a swap. It did not come with a manual, though, and I wonder if anyone has a manual they could copy for me. I opened up the radio and saw 2 open crystal sockets (5 total with 3 used). The radio works fine, so I wonder what these would be used for. Also, what is the accessory jack on the back of the unit for. Any help would be appreciated, I will happily cover copying and postage.

Hello Amateur Radio Gurus :

I need some information about the Technician Class
Amateur Radio privileges.

1. What is the average maximum distance you can Tx/Rx for this class ?
2. Is the propogation skywave/ground wave ?
3. What are the most popular equipments (ICOM, YAESU etc) both
handheld and stationery for this class ?

I would very much appreciate any information.
Thanx a lot

I think you are right, and there is a good reason to stop producing
it. Despite many good features, its notch filter was useless, noise
floor 6db higher than the competition, synthetizer more noisy than
current radios, and only 12 memories. Perhaps a small redesign to 735
could have fixed all these little flaws. Now it seems that 735 was
forked into an economy version 728 and a deluxe one 738.

If yen keeps on gaining values as it does now, we better stop thinking
about ICOMS etc. and start looking at Ten Tecs.

From: Gerald Schmitt <ggs@aerie.lanl.gov>
Message-ID: <3jid7e$4qb@newshost.lanl.gov>
Source record: 219936

Most of the repeaters I use do transmit the tone. To suppress
the tone active step usually have to be taken to filter the
audio before retransmitting. It is easier not to bother with
this as most ham gear does not have the low frequency response
to make the CTSS tones audible. My Icom-281 will scan for tones
and I almost always find them on the output of the repeater, I
also can clearly hear them on my FT-736 which has very wide audio.
I hope this helps you. 73 de Jerry KC5EGG

>in the input...??????

Usually it will not. Most repeaters that decode CTCSS do not
retransmit this tone on the output. Some can even have a output tone
than is different from the input tone.

> ...I talk of a repeater that don't need none CTCSS??

Even if the repeater is open (can be accessed without a tone), the
controller may "eat" all the DTMF and CTCSS tones it hears. This
prevents annoying other repeater users with unwanted tones, and
provides a small measure of security for the phone numbers used
(tougher to hear on input than output).

Some simple repeaters may pass DTMF and CTCSS tones. For example, the
Purdue repeater passes DTMF tones with no trouble. However, I believe
the audio circuits don't have good enough low-frequency
characteristics to pass CTCSS tones properly.

The answer is "sometimes they do and sometimes they don't".

It all depends how a given repeater has been constructed. Some repeaters even have CTCSS on the output independent of the CTCSS on the input (if any). You need to ask the repeater trustee, in hopes he/she actually knows how the repeater is constructed. In some cases, trusteeship is passed around and the current trustee has little clue how the repeater is built.

1641. 2m/440 hts comparision FT-530 vs Icom IC-Z1A

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-07 20:39:19 UTC
From: js024b@uhura.cc.rochester.edu
Message-ID: <1995Mar7.203919.15286@galileo.cc.rochester.edu>
Source record: 219939

I am looking into getting a new dual band radio (my old Yaesu 208R is still going, but will probably give it to my sister once I get her going in Ham Radio), and I am looking into the Yaesu FT-530 and the Icom IC-Z1A. I called up Ham Radio Outlet (I think that's it) and there is $100 price difference. I have seen the ads on the Yaesu, but I don't know anything about the Icom. What does the Icom have that will cost $100 more than the Yaesu? This radio would be going into the car (along with a Larsen glass mounted antenna and in the future a RF Concepts dual band amp).

Thanks for any help you might be able to provide.

>that before?)

I would prefer not to start drilling holes into my car. Besides, I don't think I would like the puddle in my car after I take the car through the car wash (and remove the antenna). My father has a mag mount on his older car, but the base is starting to rust a little bit, and I am worried about scratching the paint on my car. That old antenna has a 5/8 wave 2m antenna (I believe that is what it is).

I found out that the Larsen Glass mount 2/70 antenna is about $85. How much of a price difference is there between the glass mount and a mag mount?

Thanks.

To eliminate the possiblity of ground loops, you should use what is called a star configuration for your grounding. Meaning you have ground brought into one point that everything else connects to.

To make sure that your ground stays effective, you should use same metal connections, and coat them in something that prevents oxidation. (You can use petrolatum [sp?] for this.)

Also, your ground at the very least should be a cold water pipe, if you're in a house, or ground/1st floor apartment. Above there, and you have to about the ground becoming a radiating element. Best, of course, is using a long ground spike, driven into the ground someplace where it'll stay moist.

>
> ...I talk of a repeater that don't need none CTCSS??

Depending on how complex the repeater's CTCSS implementation is, the repeater may or may not transmit the same tone it receives.

I run a Motorola Compastation repeater. It has PL (CTCSS) decode and encode on it. The two functions are separate. The decode detects the PL tone, then applies an inverted signal of that PL tone to the audio path which results in the PL tone being eliminated from the transmitted audio.

However the transmitter is also equipped with a separate PL encoder.

Theoretically, I could set my decoder to one frequency, and have the transmitter send another tone. But why bother? I use my PL encoding transmitter to transmit a PL tone whenever the repeater's receiver squelch is open. This is so that if the 10M crossband link is on, and a user wants to only listen to stuff coming in on the UHF receiver (i.e. they don't want to listen to 10M), they can flip their PL decode on.

1646. Re: Any mods for the IC-2AT?

Bill Fletcher (FLETCHER@vilas.uwex.EDU) wrote:
> I recently purchased an Icom IC-2AT. Does anyone have some info
> about possible modifications for this HT?

There are several modifications for the IC2AT...

I don't recall exactly how to do the 'extended frequency' mod, but it involved cutting the jumper connecting the '8' bit to the '4' bit to common on the thumbwheel switch wiring and connecting the flexible printed circuit jumper at C4. C2 should be already connected. Maybe someone else remembers exactly how to do it. The radio should cover 140.000 to 149.995 MHz with the frequency 'extension'. The only thing I've used it for is tuning the audio carrier from cable channel 18 (149.75 MHZ) to chase down cable "leaks". Video carrier is located at 145.25 MHz. Really dumb place to put a TV cable channel!

Other mods -

1. Add 1200 ohm resistor across mike element to lower mike gain if your unit is too 'hot'. Makes a big difference in blocking out background noise, particularly in mobile operation.

2. Replace the BNC antenna connector with Amphenol or other better version. The original BNC center pin was poor quality and failed frequently.

Two more circuit modifications - I don't recall the original publication (think it was a club paper - sorry if some copyright is infringed upon.) Originator was W7CCP. Here's the copy verbatim:

SQUELCH IMPROVEMENT

Squelch operation (speed of action) can be improved by tying a 100K resistor between the base of Q13 and ground. There is currently already a 68K resistor there.

TOUCHTONE RECOVERY IMPROVEMENT

It seems not to be general knowledge that after beginning a series of touch tone actuations, the push-to-talk switch can be released. The 2AT continues to transmit until no keys have been depressed for about 1/2 second. However, when it recovers, the squelch actuation is somewhat messy. This can be improved by typing a 47K resistor from the base of Q32 to ground.

1647. FS .....Kenwood 2KW HF AMP.....

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-07 21:33:23 UTC
From: questusa@ix.netcom.com
Message-ID: <3jijf3$rs7@ixnews4.ix.netcom.com>
Source record: 219941

I have a Kenwood TL922A HF AMP for sale. It is about 4 years old
in absolute mint condition. It is always covered and I am a non smoker.

I am selling it because I never use it. I live at 8,000 ft in
Colorado and have a 4 element mono bander on 20 meters, so I really
don't need it.

The price is $1200.00. The going price at HRO is $1899.00, and
with the dollar droping like a rock against the yen, you can bet that
price is going to go up.

I would prefer that you pick it up, but I can arrange UPS shipping.

Leave me an e-mail note or call me days at (303) 274.7545 or in the
evenings at (303) 674.0510.

Thank you,
Bill K0OWO

1648. IC-47A PLL Problem

Newsgroup: rec.radio.amateur.equipment

I have an IC-47A UHF radio. Over the past few months I have noticed
the PPL is not locking when the radio is first turned on. The problem
corrects itself when the frequency is changed. The problems seems to be with
the LO oscillator in the PLL.
Anyone else had such a problem with this radio?

Recently I came upon an old Henry 2K-2 linear amplifier. There is a jack that needs to be connected to my radio so that the amp knows when I'm about to transmit. (I don't know if they still do this nowadays..)

I cannot find my manual for the TS450 and I was wondering if anyone knows what output line on the radio carries the "key down" information...

drilling holes in the car is what you see the radio pros that count on
their radios do. modern spray car washes seem to be able to damage the
finish on the modern car way too easily so you should be hand washing
it anyway...8)...

when you "remove the antenna" for the car wash, you would remove the whip
only and put a cap over any exposed surfaces...depending on the connector
type, you won't have a problem removing the whip while leaving the
antenna mount sealed up against the car wash.>

1656. Re: Repeaters transmit CTCSS that they receive?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-08 04:48:38 UTC
From: HOFFMANMK@CONRAD.APPSTATE.EDU
Message-ID: <3jjcv6$hv8@lester.appstate.edu>
Source record: 219856

Concerning an earlier question about whether repeaters send the tone through,

In <3jid7e$4qb@newshost.lanl.gov> ggs@aerie.lanl.gov writes:

> Most of the repeaters I use do transmit the tone. To suppress
> the tone active step usually have to be taken to filter the
> audio before retransmitting. It is easier not to bother with
> this as most ham gear does not have the low frequency response
> to make the CTSS tones audible. My Icom-281 will scan for tones
> and I almost always find them on the output of the repeater, I
> also can clearly hear them on my FT-736 which has very wide audio.
> I hope this helps you. 73 de Jerry KC5EGG

A somewhat more specific answer would be "it depends". Commercial repeaters (GE, Motorola) do not technically feed the origninal tone through but rather regenerate it and then feed it out if it is a full PL or Channel Guard repeater. Because of variations in tone input levels and phasing differences as a mobile or portable moves, plus distortion and noise added as a unit fades, it is common practice among the commercial builders to have a decode board and then add back in the tone with a encoder. That way the quality of the PL tone transmitted out of the repeater is better with a constant amplitude and phase.

Some repeaters receive PL and transmit carrier squelch. In this case a high pass filter cuts off the received PL tone and does not let it pass out into the transmitted audio.

Some people putting in after market controllers do not filter out the received PL tone and let it pass through. Such a PL tone will seldom be as clear or relaible as a regenerated one.

Vincent Simard (simard01@gel.ulaval.ca) wrote:

: I was wondering if any repeaters send CTCSS that they receive or
: they simply send the signal with the audio....

: I mean... if I operate my radio on a repeater with a CTCSS of
: 100khz.... the output of the repeater will have (or not?) the same CTCSS as
: in the input...??????

I was trying to think of all the various combinations that are possible
and that I have run into with respect to CTCSS. The issues are as follows:
* A repeater with audio response that goes down to very low
frequencies will pass any CTCSS tone through to the transmitter.
* A repeater may have a filter between its receiver and transmitter
so that very little is passed below 300 Hz, thus removing CTCSS
tones.
* A repeater may have its own CTCSS tone encoder on its transmitter
which generates some CTCSS tone. This transmit tone may be present
a) all the time b) only when a particular CTCSS tone is present
at the repeater receiver or c) according to some other rule.
Repeaters that do this will generally filter out CTCSS tones on
the receiver and not pass them through to the transmitter to
avoid competition between its own tone and a user's tone at
the repeater output.
* A repeater's access (whether the transmitter comes on or not)
may be controlled the presence of a CTCSS tone on the input.

So there are actually quite a few possibilities and combinations.
The most common situation I have run into on amateur repeaters
is that the CTCSS tones are filtered out. Your mileage may vary.

In our area, the use of CTCSS tones on the output of repeaters
is increasing in an attempt to compensate for the truly
rotten receivers ("intermod") in many modern amateur transceivers.
(Requires CTCSS squelch on the user's radio.)

>I've yet seen.
>David Johnson - KJ7GA "That's no moon...That's a space station."

Yup, my wife has the 202, and I get to play with it a lot... This radio never ceases to amaze me! Hooked up to an outside antenna, it makes a decent base-station rig - 8-10W (!) out on a 13.8V power supply or gelcell battery, virtually zero intermod, images, or desense, and we're two miles line-of-sight to a big pager/commercial site. Handheld, I can hear repeaters from deep inside the building here at work, where normally the digital crud would drown out everything. The back of the radio is cast aluminum, which gives it a nice solid look and feel. This is also the heat sink. It does so many "game-boy" things, as Gary would say, that I can't remember them all, including stuff like one-button transmit of a DTMF string, DTMF code squelch, etc, etc.

If want a radio for communications, you really can't beat it at $200-250 new. If you want a scanner built in, you'll pay a lot more, and get less communications capability. I also own an IC2AT, the thumbwheel "brick" that's supposed to be such a great radio. To be honest, it's next to useless in any high RF environment, in comparison to the HTX202.

I do like to play with radios that can rcv DC to daylight. Scanning can be fun, and even useful at times. Let's hope the manufacturers continue the trend toward making these kinds of radios tighter, with sliding bandpass filters in the front ends. My old scanners have a crappy implementation of something similar, and let's just say I hope the new transceivers do better.

Do you want a handheld portable? A permanent mobile in your car?
Marine use only? Do you want a laptop computer version with a
PCMCIA GPS card? What features do you want? Longitude/Latitude/Altitude
numerics only or do you want graphic track plots, waypoints, etc?
Will you want to suck serial data out of the unit and process it yourself?

If all you want is a handheld with graphics, check out the Garmin GPS 40
or 45. This will cost you between $300 to $400. Avoid the GPS crap
advertised in the AES catalog. OK, the high-end Sony they have is good,
if you can afford a $1000.00 handheld. Check out the outdoors-man and
boating stores. They'll have a variety of handhelds and mobiles that
surpass the GPS units advertised by AES (and at a lower price!). Also,
read the sci.geo.satellite-nav newsgroup for a week or two and you'll
know just what to buy.

BTW, the Garmin's have a cool graphic of the satellites as they appear
over the horizon. They move on the display in real time! Of course,
that's not really a requirement. But all the data to plot them is
there. It's just a software "freebie".

Hi all......

I have the following pieces of stereo equipment for sale:

Onkyo TX-25 AM/FM digital reciever
Has inputs for a tape deck, CD, phono or VCR.
Has presets for the radio stations you enjoy most.
capable of driving 2 sets of speakers
Is in excellent working condition
I am asking $100.00 O.B.O.

Fisher VCR
Cable ready, Remote control
2 heads, programmable with timer
A solid VCR
I am asking $90.00
give me a call

Kyocera PL601 Belt Drive Turntable
This was a nice one and still is...
Dust lid is cracked(minor)
Works great, good cartridge
Asking $80.00 and negotiable

My name is Richard, give me a call at 223-2835, or email me at
ault@public.sdsu.edu

Thanks.....

For what it is worth, I have studied the schematic of my IC24AT and could not find any path between the RX and TX audio. It appears to be done acoustically. You would think that the 32AT would be the same way... but then again... maybe not.

1680. Re: Shack Grounding Help

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-08 18:13:16 UTC
From: Simon Twigger <simont@post.its.mcw.edu>
Message-ID: <3jks3s$fka@post.its.mcw.edu>
Source record: 219874

Yet more grounding queries:

I am also setting up an HF station, I have the 8' copper pipe as suggested in the various ARRL teach-yourself-amateur-radio books and I have the cable to connect to it, however, up here in WI its too damn cold right now to put anything in the ground, I could hammer all day and still not get that copper pipe under.

So, are there any short term solutions that I can use in order to make things safe? At present I have no additional station grounding apart from the fact that the plug on the power supply is connected to the earth via the 3-pin plug socket on the wall. Would it make sense to connect the transceiver gnd to the socket gnd also? The area outside my window is all paved over so I cant stick anything too close even if I wanted to! There is a water pipe which comes from our kitchen sink and into the ground that I could use, but that would mean the ground went out of the shack window and 20' around the outside of the house before it connected to the pipe/ground.

At the moment I disconnect everything when its not being used so that should prevent anything untoward happening in my absence, but this obviously doesnt do much towards prevention when things are in use.

Any advice on this subject would be most appreciated!

Simon, G1SNT

Medical College of Wisconsin, Milwaukee.

>drilling holes in the car is what you see the radio pros that count on
>their radios do. modern spray car washes seem to be able to damage the
>finish on the modern car way too easily so you should be hand washing
>it anyway...8)...
I am not exactly a radio pro, and whenever I trade my car in, I doubt
the next owner would like a hole in the roof when I remove the antenna.
True, I should be hand washing it, but in Rochester, NY I would have to
wash it every couple of weeks as it is really a mess over here.

>when you "remove the antenna" for the car wash, you would remove the whip
>only and put a cap over any exposed surfaces...depending on the connector
>type, you won't have a problem removing the whip while leaving the
>antenna mount sealed up against the car wash.>
Drilling into the car is not an option. I was pretty close to ordering a
mag mount, but then I couldn't find a place to run the wire, except through
a window (I have a Toyota 4Runner). I was considering running out the tailgate,
but then I probably wouldn't have enough wire to reach the center of the
roof. I ended up ordering the Larsen dual band glass mounted antenna.

Thanks for the help.

Source record: 219888

Hello, I am a relatively new amateur who just purchased an MFJ1276 TNC2 for use with my Kenwood TS130S rig and a 286 PC clone I borrowed from my housemate. My question is, who out there is using a similar set-up successfully that might let me ask them a few questions. I am running windows 3.0 and am without the proper software for Pactor operation. What do you recommend, and where can I download it. There should be a way to get by without buying the software packages MFJ tries to sell with the product. Then, maybe we could set up a sked to try the thing out.

>
>Does a headset exist that has dual modes: VOX and Non-VOX (PTT) settings?
>If it matters, I have a 2m Yaesu 11R.

I have a headset for my 530 that has an earpiece that fits in your ear
like those mini-headphones, has a small boom mike attached, and a PTT
switch in the cord. Works great for noisy environments and in the car
(can shift and talk at the same time). Got it for ~$40 at AES -
manufacturer is NCG.

They also make a larger one for the same price that has a standard
on-the-ear speaker and bigger boom mike. There are two models for
each type - one for Yaesu/Icom/? and one for Kenwood.

Unfortunately it's PTT only - I couldn't get it to work as a VOX mike,
anyway. But I figured a VOX mike in the car wouldn't be a good idea
because I'd have a box full of pink slips after some of my commutes.

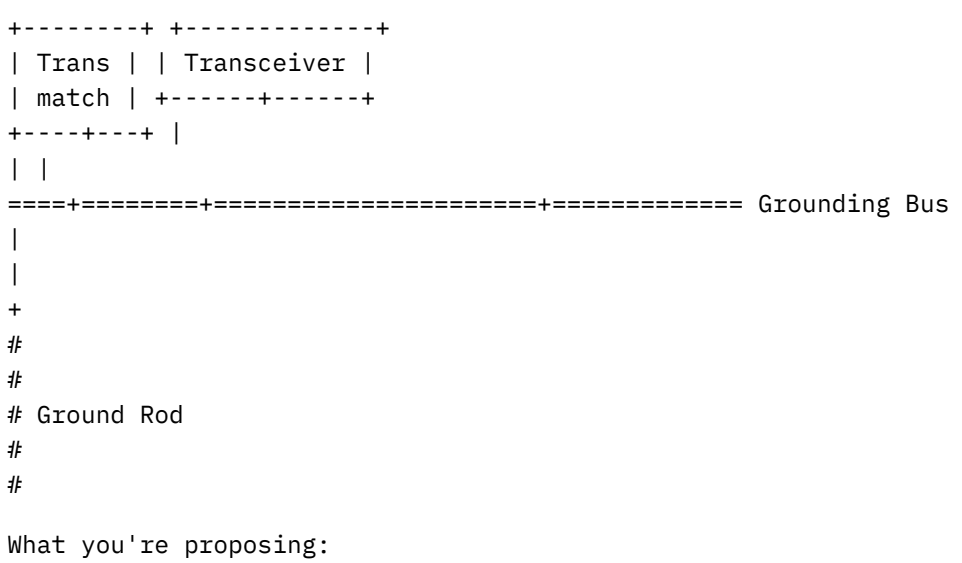
Gary,

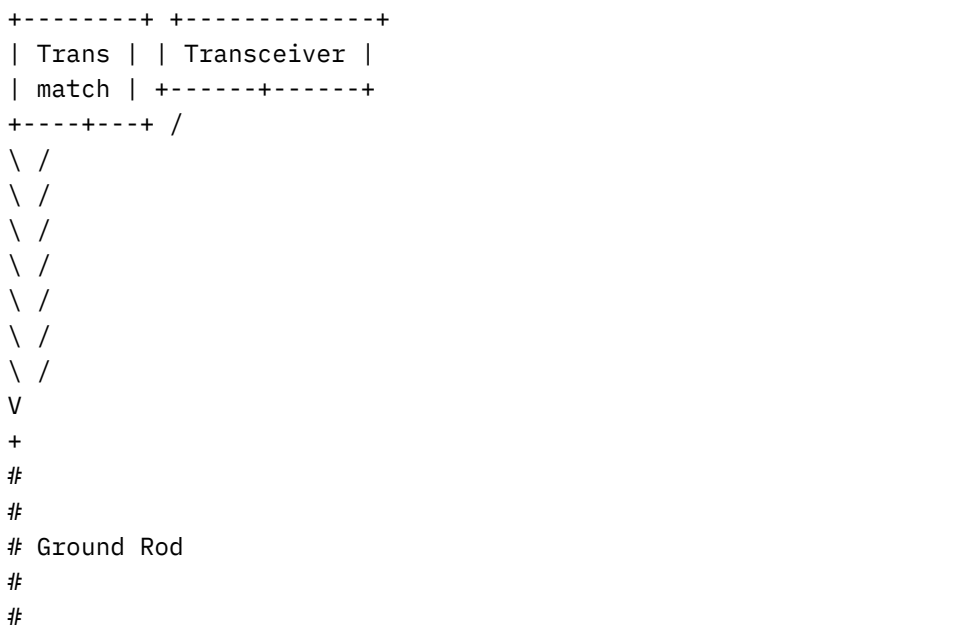
I'm sure I'm just dense when it comes to this grounding stuff so please forgive me for the following questions. But I suspect others may have the same questions.

Let me draw a few crude pictures (within the limits of text) and see if I can get some answers.

The "bus" diagram:



What you're proposing:



How do they differ? It seems that if you are saying different potentials can exist on the grounding bus, then can't different potentials exist on the ground straps going to the ground window? I'm obviously missing something, but don't know what.

I have a Cy.B. amplifier for sale. I understand these are illegal to use but I thought someone could convert it to work on 10 meters. It runs on 12 volts and says Bi-lateral 4 power DX 600 on the front. There are 4 buttons on the front that say Power,Rec-Amp,AM,and SSB. There is also a meter on the front.

p into a dummy load with a CB putting out 3 watts. I got the following readings on a Bird watt meter.

SSB 76 watts
AM 107 watts
With the AM and SSB buttons out 125 watts

I'll consider any offers.
iI Thank-you.

Transverters are a very often used method. You get to use all the nice features of your expensive HF rig (keying and 10Hz resolution and nice audio) without having to buy it again for a VHF rig. (and again and again for each band).

1701. Adjusting modulation on DJ580?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-09 05:08:21 UTC
From: WALLY@ukcc.uky.edu
Message-ID: <1735C1F5S86.WALLY@ukcc.uky.edu>
Source record: 219862

My modulation, according to a local repeater, says that I've only
got 3.5khz deviation, and 4.5 - 5 is better..

Any ideas would be appreciated..

1702. The Hamblaster

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-09 05:27:13 UTC
From: willco788@aol.com
Message-ID: <3jm3jh$1j6@newsbf02.news.aol.com>
Source record: 219859

I just received several filters from Will Torgrim N9PEA to check out on the Hamblaster

They are noise reduction, auto notch and adjustible linear phase filters. One neat thing about Hamblaster is it's ability to freeze the filter. I can, for example, copy cw and while the tone is present, I can freeze the filter.
This creates a fixed bandpass filter response and improves reception. The noise reduction really works!

If you want to see Hamblaster in action, I will be at the Dayton Hamvention at booth 552.

See ya there!

That's really strange. I've owned three DJ-580's and have a couple
friends who also have one. All the DJ-580's I've ever seen have a really
hot modulation -- almost too much. Of course I like 'em that way.

A repeater told you this? Or a friend on a repeater told you?
^^^^^^^^
If you do find a way to turn it down, please let me know so I can turn
mine up some more. ;) Good luck.

Couldn't agree more. Having used both mag mount and hole mount, I'd DRILL THE HOLE! The worst "feature" I've heard about the glass mounts is the fact that the coax seems to do most of the radiating! Inside the cab with you! Drill the hole and send the RF to the receiving station where it belongs. How many cop cars with mag mount or glass mount antennas do you see?

: -Emarit drranu@holly.ColoState.EDU

I have an old dual-band mobile, and when I changed my car I went looking for a newer radio. Mostly I wanted something with a separate front panel for safety/security/convenience. I was not prepared to accept reduced performance.

I have not been able to find anything to equal my old TW4000. Somehow, the thought of spending several hundred pounds (Sterling) to get something with, AT BEST, 10dB worse blocking performance does not attract me. I've borrowed a few current production radios of various makes, made my own measurements, and found nothing to compete with the ten year old radio.

Not only has the ability to receive amateur signals in amateur bands been slaughtered by the demand for wideband scanning, but also the trend towards controls on microphones, and oddball mic connectors is a real pain in a country where traffic police book people seen using fist mics.

Despite the reputation of the electronics industry, we're now in the position where vintage radios offer the highest performance :-)

Cheers
David

HI, Not too many really. I have has 2 Grand Cherokees and have found
the easiest way to get power from the battery was to go thru along side
the hard shelled cable used for the hood release in the corner on the
drivers side under the dash.. I ran a coat hanger thru the grommet beside
this cable, taped the power cord to it on the other side and pulled it thru.
Of course I had to runit along the firewall on the engine side and around to
the battery but all in all it was pretty painless... Works Great!!

Good Luck...

Aww, tell us what you didn't like. :-)

I don't find the notch filter useless on mine, and the internal noise
floor is well below atmospheric noise when used with any reasonable
antenna, gilding the lilly with spec-manship beyond that doesn't seem
very useful. And only 12 memories? You mean it has memories? Whatever
for? I don't need a HF scanner.

It has a solid transmit section with wonderful thermal design, it
has good stability, sufficient sensitivity, good strong signal handling,
and with the optional filters, acceptable selectivity, all in a user
friendly little box. What more do you need?

I'd buy another one today if I didn't already have one. Of course with
the current dollar/yen ratio, I probably couldn't afford it. The 728
doesn't have several essential features, like the transverter jacks,
and the 738 is too hulking big. To my mind, the only flaw the 735
had was that stupid smoked plastic door on the front. After I took
that off, I thought it was the perfect portable and mobile transceiver.

Some do, some don't. My machine filters out the user tone and asserts it's own clean transmit tone for those poor souls with intermod prone radios who monitor. Other repeaters may pass the user tone through, or filter it out. It depends on how the owner feels about such things.

REALISTIC PRO-34 200 CHANNEL SCANNER FOR SALE
Less than 4 years old. Never dropped or otherwise abused.
This scanner is in great condition. Asking $175.00
Call Don at (307) 721-8959 or
e-mail at dlarson@uwyo.edu
Includes original packaging and owner's manual,
and covers the following frequencies:
30-54 MHz
108-174 Mhz
308-512 MHz
806.0000-823.9375 MHz
851.1125-868.9375 MHz
896.1125-960.0000 MHz
I understand that this unit is modifiable for complete 800 MHz coverage
and also 66-88 MHz, although I have not performed these mods.
Serial No. 979930 if that matters to you.

I gave a reason for ICOM to upgrade 735 to 735A, i.e., minor
adjustments that at little or no cost would make the rig up-to-date.
The sensitivity is important with mobile antennas on 10-15m,
especially on CW, when hiss is irritating. Also, the notch filter has
a depth of 1KHz. I enjoy the rig much more since I added an external
audio filter. You can use 12 memories to move from band to
band, especially that 735 lacks stacking band memories.

Despite all the arguments, I agree that 735 is still one of the best
in its class

I have a Larsen KG2/70 on my Chevy Astro minivan and I am very
satisfied. I did a rough unscientific comparison between it and the
1/4 wave magmount it replaced and the Larsen seemed to perform
slightly better on weak signals. This was on 2m. I didn't do a
comparison on 70cm. You should be able to find the Larsen for $60 or
under if you shop around,

I have no connection whatever with Larsen other than as a satisfied
customer.

Typically, the 'bad sound quality' is due to the limited band-pass of the
AM receiver in question. Also, most broadcasters have now started to
'enhance' the sound by boosting the high end of the sound, in an attempt
to overcome the short-fall of the receivers.

Good luck overcoming these problems... :)

taspicer@firefly.prairienet.org (Todd A. Spicer) writes:

I solved the problem in my '93 by running the power through the wiring harness grommet on the passengers side. Use a coat hangar or a 3 foot piece of welding rod (1/8" or so), sharpen the tip, and push it through. Once you get it inside the compartment, and can reach the end of it, fold the end in the engine compartment over into a very tight loop, attach one of the wires to the loop, and *solder it*. Then attach the other wire about an inch back from the first, and solder it. You don't want these puppies coming loose as you pull them through, and twisting them will not hold. Having some silicone spray lubricant around helps also. Pull the wire through into the passenger compartment. When complete, shoot a little silicone gunk around the cable. I attached crimp-on eyelettes to the cable, and use the battery terminal tightening bolts for the attachement point. Solder the eyes after you crimp them, unless you have the $200 AMP crimp tool.

Just for a reference point, it took me two days to pull the entire interior out of the jeep, punch 3 holes in the roof for the NMO mounts (use Larsen, and use some metal tape to secure the coax to the roof, over to the side, and down into the body), install the TM741 in that weird little indentation in the cargo area, run the microphone cable up the front, mount the control head to the rear-view mirror with double stick tape, mount a $10 speaker onto the overhead console, and get the whole damn interior back in.

Have fun.

I'm nuts about my 735, and you can't have it!!! :)

The 735 was my "dream rig" while I was a poor college student (the first time - see sig). Now that I have one, it's still my dream rig.

1720. Help with Yaesu mic connector

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-09 22:06:32 UTC
From: dbushong@wang.com
Message-ID: <D570w6.B2u@wang.com>
Source record: 219816

I have a Yaesu FT-900, which uses a modular (like the telephone plug) connector for the mic. I'm trying to use it with a voice board that the CT guys sell, but the cable that I have is made for a round 8-pin Yaesu connector (the usual kind that many HF rigs have).

My question: is the connector on Yaesu mics that use that kind of connector male or female? I think the FT-890 is one such radio. I don't know which part of this cable plugs into the radio, and which one the mic plugs into.

Thanks!

Dave, KZ1O

1726. First Impression: ICOM IC-2000H

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-10 03:17:31 UTC
From: myers@Cypress.West.Sun.Com
Message-ID: <3jogcb$pgt@abyss.West.Sun.COM>
Source record: 219806

I just got an ICOM IC-2000H, serial# 1132. It is a new 2m mobile transceiver by ICOM. The claim by ICOM is that this radio has excellent rejection of intermod while still providing a wideband receiver (118-174MHz, AM from 118 to 138, FM 138-174).

First impressions:

- Like many new mobiles, the radio is essentially a big heat sink with pieces attached to it. Appears to be quite rugged.

- The receiver appears to perform as claimed; I've been using a Motorola MCX100 in the car for about a year, and that radio has *excellent* strong signal performance combined with good sensitivity. The IC-2000H seems to be in the same class, but I haven't taken it to a radio site yet, so the jury is still out.

- Ergonomically, it seems to be like most current mobiles. Frequencies are selected with a knob ("VFO") with two speed settings. 50 memories plus priority channels with scan modes, etc., are provided.

- I'm pretty happy with it so far; later on I'll try to post a more comprehensive review.

1735. Cracked speakers

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-10 16:09:11 UTC
From: drice@enuxsa.eas.asu.edu
Message-ID: <D58FJB.EG8@ennews.eas.asu.edu>
Source record: 219836

How easy is it to crack a plastic-cone speaker? I have a Kenwood TH-22 which I've been using for about 2 weeks, and the audio has already started to take on a "buzzing" quality. This generally occurs more as I turn the volume up higher, and not all voices cause it to happen. I haven't turned the volume control up past about the 12:30 position (which isn't really even enough to be heard in a car over the road noise).

I suppose it's possible that this problem is not a related to a cracked speaker, and might just be that the case is resonant at a certain audio frequency. Is there a quick way to tell if a speaker is really cracked or not without opening up the case? I'm not going to be too pleased with this radio if its speaker can be damaged by turning the volume up to an audible level.

DAMARK (1-800-729-9000) is now selling the Buddy L Battery
Recharger/Refresher for $19.95 with free shipping.

I've been using this unit to refresh AAA alkaline batteries. I
alternate between two pairs of AAA batteries which I use ~2.5 hours/day
5 days/week in a portable RS AM/FM radio. I don't really remember the
how long ago I last replaced these batteries, but I think it was at
least a month ago. My distinct impression is that starting out with new
batteries and recharging them every day leads to a major increase in
battery life.

I am trying to set up my FT-530 to operate on my motorcycle, a BMW K75S.
I understand that 73 magazine had a cover story in the April 94
issue covering this subject. Is anyone out there able to mail or fax
me a copy of that article? Please post or email any replies.

I'd also be interested in hearing comments from anyone who has done this.
In particular, I'm looking for headset helps, particularly how to
make one headset work either PTT or VOX, radio mounting tips, and
suggestions for antennas to work without a ground plane. (I'd
prefer NOT to home-brew the antenna, so suggestions for commercial
antennas are preferred.) I do want 2m/70cm ability as well.

73 and thanks in advance.

Yours is fairly new, right? Well, you can still fool the microprocessor
into trying to work in the cellular area, but the RF components needed
to actually make it work aren't populated on the board in order to comply
with the ECPA and get an import permit. Swap it for a pre-ban unit, or
live with it.

I responded to Sven in some detail yesterday by email. Today got this
month's edition of a magazine called Satellite Times. This month's
ham sat column has excellent short discussion on data satellites &
modes.

Sig..if you get an AZ-EL array going you may want to switch to
Realtrak. It will do the tracking AND control your antennas also
at the same time.

If you have any detail questions give me a shout at email billh@gn2.getnet.com

The birds are fun...get in there and do it.

Jeff:

I have the 1400 ma version. It performs well, but arrived with a small
hole where the two halves of the battery were improperly joined. It
also requires me to be very precise in order to slide it onto the
rails on the body of the radio. I think maybe quality control was
lacking, at least for this pack. The price ($40) was certainly right.
I would order direct from them and be sure I could return with no
problem - or look elsewhere.

I reviewed one for a ham magazine. I recently put in the optional
CW filter. We used this rig during a QRP expedition for our
University club.

It is a pretty amazing little rig.. small.. very solid and
portable. Plenty of audio. Bottom line is it works fantastically
for the type of rig and price. I worked a couple of major contests
with it and have had people stop to comment on how good my audio
sounded. With a small wire you can work the world.

If you get the CW adaptor you most likely will need some type of
audio filter for the rig to be useful in this mode.

SRR>1) Can get no ALC deflection at all on 10 meters.
SRR>2) Radio only putting out 60 watts on 10 meters.
SRR>3) More importantly, only DRAWING 210 ma while pulling
>well over 250 on ALL other bands.

SRR>Is my 12BY7A driver tube a bit weak up around 10 meters?
>It begins to degrade on 12 meters and by 10 meters will provide no
>ALC, and only 210 ma of plate current.

The higher bands (e.g. 10M) are generally the first to go. And yes,
it's quite often the 12BY7 driver that starts ot lay down first. 6146's
are VERY hearty tubes and will generally take a LOT of abuse before they
roll over. Try to get a GOOD QUALITY driver... JA-made if possible.
Wish I could recall the JA manufacturer most of the companies used to
use.

SRR>Second problem is that I was aligning the 1.8 MHz antenna coil and
>it broke (although only the top part of the powdered iron "can"
>broke off). However, adjustment of this inductor had previously
>done NOTHING. Strangely, it seems to have no problem, even when
>broken!

Strange.. I'd have expected it to make a substantial difference!
Possibly, it was already too far out and moving it further out didn't
cause any change. Otherwise, check for cold joints around this coil, or
broken wires, etc. Do you have a LONG, THIN, hex tuning tool with which
you can reach down THRU the slug, to the bottom half, and turn it by
using the bottom half (instead of the top half)? If the slug cracked at
the top and if the broken part of the top's not come out, any attempts
to turn the slug using the top half will generally cause the broken
piece to slide outwardly and lock the slug against the sides of the coil
form... reaching THRU the slug and tuning it from the bottom MAY allow
you to continue adjusting it without expanding the broken top piece.

GS>Recently I came upon an old Henry 2K-2 linear amplifier. There is a
>jack that needs to be connected to my radio so that the amp knows when
>I'm about to transmit. (I don't know if they still do this nowadays..)

GS>I cannot find my manual for the TS450 and I was wondering if anyone
>knows what output line on the radio carries the "key down" information...

I cannot help you with the pinouts, sorry, BUT BEFORE you connect the
amp keying (T/R) line to the TS-450, make sure you know what the relay
voltage is (across the amp RELAY contacts... NOT the relay itself, the
voltage you'll have to key to ground to actuate the relay).

If the voltage is in the 12-24 VDC range, the TS-450 will key it with no
problem. If it's in the 120 VAC/VDC range, then you need to make
certain that the '450 T/R circuit will accept that level of voltage.
Also, you may need to ensure that the '450 keys a (internal) RELAY to
key the amp... particularly if the amp uses AC on its T/R relay.

Good luck,

Tom Hammond N0SS

From: jlowman@netcom.com
Message-ID: <jlowmanD5947L.Grs@netcom.com>
Source record: 219833

I've been away from the hobby for quite a few years, and am just getting reacquainted with it. One area of interest, especially since my XYL is getting her tech license, is VHF/UHF. However, the cost of all-mode XVCRs is pretty high.

I recall, when I bought my original Drake R-4 and T-4X in the late '60s, that Drake made transverters to extend the rigs' capabilities to 6 and 2M. How well did these work? What's availability like today? Anyone want to sell one?

Thanks in advance,

Jim - KF6CR

Jeff - Here's my expereince with Periphex:
Several years ago I purchased a pack from them which never really held
its charge. I called them to return it, per their guarantee. THEY REFUSED
to take it back, exchange it, whatever.
I even wrote to ARRL's advertising mgr with a complaint, since ARRL
supposedly backs their advertisers. Got a form letter back from ARRL, and
still have my dead battery.
I have purchased from W & W, and had no problems. 73 Barry

To the amateur that was looking for information on this jack:

The rear panel accessory jack accepts a standard 5-pin DIN male plug
available from Radio Shack. The pinout is follows:

1, 4 Received audio out
2 Transmit audio in
5 +13.8 VDC out
3 Push to talk (ground to transmit)

The connector is numbered 1-4-2-5-3 when facing it starting with the
lower left pin and going clockwise.

Well, QST had an article about this back in '92 or '93. The guy was
running HF from a god wing, doing cw, of course.

The funniest part of the article was where he mentioned that he brought
a microphone along "for emergencies".

Hi Michael,
I live just a short drive from Ramsey, and so I go in there quite often and browse. I've bought
quite a large number of their products, and have had generally good luck with them. Any problems I did
have were taken care of for me. I would recommend doing business with them. You can find higher
performance rigs, but they offer solid value for your money.

(No, I don't work there, neither do any members of my family) :)

>
> Hi All. Is anyone using Periphex battery packs
> Does it fit nice and snugly and seem like a good deal?
>
>>>>
I bought a 1400 ma pack for my FT470 from Periphex.
I shipped the pack back to Periphex twice:
When I got the pack, there was a strong smell of acetic acid coming from the silicone seal glop Periphex uses to glue parts into the battery packs. Acetic acid has a nasty habit of corroding connections and since I spent $59 for the pack, Periphex agreed to re-build the pack WITHOUT using silicone seal.
And that's the good news.
That case fit my FT470 fine, like it came from Yaesu. You guessed it.
When Periphex built the new pack without the silicone seal, the battery case they sent me the second time loses contact in the tracks of the HT. I had to hold it in place for it to work....
So I sent it back a second time.
Periphex refused to fix the pack, saying it fit their FT470, OK....
I'll probably tear the pack apart and use the cells to rebuild one of the Yaesu packs that fit my HT....

1771. Crossbanding

Newsgroup: rec.radio.amateur.equipment

From: tbowman@leba.net
Message-ID: <3jt2k7$dh7@fig.leba.net>
Source record: 219754

Does anyone know how to program the FT-470 to receive on 2-meters
and transmit on 440mHz? (Please, no flames about crossbanding.)
I want to receive the 2-meter repeater on the HT, then transmit to my car
going into the dual-band on 440 and coming out on the 2-meter
repeater's input.
Making my TM-733 work as a one-way repeater in the car is a piece of
cake. Problem is getting the FT-470 to receive on 2-meters
and transmit on 440....thanks in advance.

Just set the 2 meter frequency into a memory, hit the *band* button
to make that the subband channel, put the transmit frequency into
a memory, and push the PTT. If for some reason you don't see the
subband on the display, push the *sub* button to display it and
make it audible. The balance control determines the ratio of main
and subband audio, adjust it to suit you. Note, you'll likely get
feedback if you don't use an earphone.

$*$*$ 20 Weak Signal Challenge (HAM Post) - Now $30 $*$*$

Three weeks have passed since the original posting of this challenge.
During that period, the Web page was accessed over 1000 times.
The weak signal recording has been listen to and processed by
many. Several operators using their best audio filters have been
able to copy my call. And yet, a correct identification of the calling
station has not been made. I am increasing the amount offered to $30
and will continue to escalate the prize until someone cracks the problem.

Details on the challenge can be obtained from my Web page:

http://www.webcom.com/~af9y/

The winner will be announce in the UseNet groups carrying this post
and my Web page.

Final Note for those trying their own signal processing techniques:

Many have asked about the WAV file format used for the
A/D recording. The format is a PC Windows standard which
contains 43, 8 bit-bytes of header (which can be thrown away)
followed by a consecutive series of 8 bit A/D data. The sample
rate was 8192 samples/sec.

Good Luck,
de Mike Cook - AF9Y

>volume up higher, and not all voices cause it to happen

I'm not familiar with the Kenwood speaker specifically, but my background
includes many years in the audio business.

The fact that the offending noise becomes louder as you turn up the volume
probably eliminates a rubbing voice coil. I'm not sure I've ever seen a cracked
speaker cone, but maybe communications speakers use different materials
than I am used to.

The specific answer to your question is that I know of no way to determine
the cause of your problem, other than to disassemble the cabinet. The problem
sounds like it might be a cabinet resonance, but you won't know until you look.

1781. Re: Hamblaster?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-12 03:17:53 UTC
From: willco788@aol.com
Message-ID: <3jtp51$ds3@newsbf02.news.aol.com>
Source record: 219763

The hamblaster is available from Willco Electronics the price will be
$289.95
plus $5 shipping.

Here's some info

The Hamblaster is a sound board that plugs into a PC 8 bit
expansion bus. Unlike conventional sound boards, it has a
Texas Instruments TMS320C25 digital signal processor chip and
high speed memory. It's not Soundblaster compatible.
^^^^^^^^
It also has an external 12 volt power supply connection. When
the computer is turned off the Hamblaster runs on the external
power. You can setup a filter or modem and if your computer
interfers with your rig, simply turn it off. The Hamblaster
will stay alive!

From a disk file, modems or filters are loaded into the memory
via the XT or AT ISA bus. Once they are loaded and configured
you can exit the control software and run other applications.
On the rear panel, the Hamblaster has a digital TTL I/O connector.
You can interface it to the "External Modem" connector on a PK-232.
It also has an analog audio input, output. To monitor your radio
through the Hamblaster filters, the input connects to the audio
output of a transceiver and the output can connect to a TNC and an
amplifier/speaker.

The current prototypes are full size PC,XT/AT compatible PC
boards using 16k bytes of static RAM. A new design will be
on a 3/4 size (Tandy compatible) and will include 64k bytes
of memory. To improve reliability and compatability we are
also adding I/O wait state circuitry

You can load a packet or RTTY filter, perform diagnostics,
display a digital oscilloscope or FFT, tune the filters using an
FFT, change the filter parameters and improve reception. The
Hamblaster will include a Windows for DOS software package
(minimum requirement: XT with 640k of memory and CGA graphics).
Most of the features, that are available in the Windows version,
will run on the DOS version.

The Hamblaster can interface to any packet modem and allow you to
load improved filters for RTTY, AMTOR, PACTOR, Packet Radio or CW.
Other filters will improve SSB and AM reception, copy Morse code,
display FFT's, decode DTMF and PL tones.

The Hamblaster is Manufactured by Willco Electronics you can reach them at

I own a 5100, and love it. No complaints. I have heard some people say that the built in duplexer is more like a built in attenuator, but I have never noticed that. I would recommend the radio to anyone who wants a good dual bander. good audio out, loud enough, but not distorted, and simple to use once you understand it.

Dana Myers (myers@Cypress.West.Sun.Com) wrote:
: I just got an ICOM IC-2000H, serial# 1132. It is a new 2m mobile
: transceiver by ICOM. The claim by ICOM is that this radio has
: excellent rejection of intermod while still providing a wideband
: receiver (118-174MHz, AM from 118 to 138, FM 138-174).

: First impressions:
(snip)

I must agree with you on the intermod, the unit is very good in that respect. However, I.m not real happy with the multifunction buttons. For one, the monitor feature is secondary to the power setting function. So if you don't keep your finger on the button long enough or slip (moving car) you change the power level instead of checking the input to the repeater. The same goes for the other buttons. An other item that is not quit right with the radio is the microphone sensitivity. This one is dang hot!

I have two Yaesu FT-2400's and like the way the radio perform. I've been told that the FT-2500 works just as well. Icom's radio has an excellent receiver, 6 digit display, repeater tone seaker, 50 mem, etc. All improve-ments over the Yaesu FT-2400/2500, but I'm still of the oppinion that the Yaesu radios are a tad better radio, specifically in the user interface area.

Either radio will serve its master well.

Reviving the Hopkins Amateur Radio Club, I've come across some very old
equipement.

One such piece is what looks like an old RTTY machine. The size of
a filing cabinet, it looks like it is left over from the cold war era.
(The useless manuals are copyrighted 1955...)

However, the piece is still functional and we have many rolls of paper.
So instead of donating it to some museum, I'd like to get it working again.

The side panel has some plugs labeled TU, TD, FSK, AMP, and EMITER.
The problem is that I don't know where to start. If anyone can help
me out, please e-mail me or post...

From: pbutlalj@ia.net
Message-ID: <3juh8u$f5c@allanon.ia.net>
Source record: 219769

I posted this question some time back and right after I did that
the feed of newsgroups to the service provider I am with died. In the
time that the server was dead all the interim articles ended up falling
out of the system and rotting on the floor someplace.

I am looking for a small lightweight reliable UHF HT for the
amateur band. This is a radio that will be used all day long and I will
need something that is very frugal in the power consumption department.
Transmit power is not a very high requirement. If it can go to 100 mW
power level that is fine.

I am sorry that I have to post this again but as I said there is
a pile of news articles upstream from where I am and it isn't getting
back into the pipeline. :)

Thanks for any replys and answers.

Message-ID: <4b8_9503132204@woodybbs.com>
Source record: 219781

Howdy Folks:

I hope some one can give me a bit of assistance here.

I'm trying to help a young local ham who has a Kenwood TH-79A with low audio (deviation).. in the 2-3kHz range.

From reviewing the schematic of the TH-79A, I've found what appear to be the deviation controls for both VHF (VR301) and UHF (VR302) on X57-440x-xx (G/7), Daughter Board, of the schematic(s).

My problem is that I don't know where they will appear on/in his H-T and I don't want to risk damaging anything by doing too much 'searching' for them without having something of a decent idea of where to look.

If anyone has a Service Manual for the TH-79A (or has first-hand knowledge), I'd be most appreciative if you could please give me a brief narrative description of where they (VR301 & VR302) are in the H-T.

Also, if there's any other mention of either a Microphone Level or Deviation Adjustment control, I'd like to know about it. From what I was able to see, there appears to be one ONE control for each band, and it appears to control deviation rather than mic level.

You may reply here or to: thammond@mail.more.net

Thanks in advance.

-------------8<---------- cut here ------------->8--------

KENWOOD TM-221A (Simplified Operating Instructions)

VFO/MEMORY-SELECT
Press <VFO/M> to switch between MEMORY and VFO.

SELECT-FREQUENCY-(VFO-or-MEMORY)
Rotate the TUNING knob (or press mic. <UP/DN> button) to
select frequency or channel.

SETTING-MEMORY-CHANNELS -
To SET a freq. into a memory:
1) Switch to MEMORY;
2) Select a CHANNEL;
3) Switch to the VFO;
4) Select a FREQUENCY;
5) Press the <M.IN> button two (2) times

SCANNING
Select VFO or MEMORY and press <SCAN>. Any <button> to stop.

MEMORY-LOCK-OUT
Switch to MEMORY and select the MEMORY to be locked out.
Press <M.IN> and then <SCAN> (a star in the box indicates
lockout). Repeat to unlock.

<SHIFT>
Changes transmitter OFFSET from -600 kHz to SIMPLEX to +600
kHz.

<REV>
Inverts TX/RX so you can listen on the Repeater INPUT and TX
on its OUTPUT.

Freq.-Step
Select VFO. Press <M.IN> then <REV>. TUNING (UP/DN) to
select step.

Confirmation-Tone-ON/OFF
<M.IN> then <CTCSS>.

CPU-Reset-(Emergency-ONLY)
PWR OFF. HOLD <VFO/M> and <M.IN> and turn PWR ON.

Scan-Limits
LO in ch. 'A'. HI in ch. 'b'.

Odd-Splits
Store RX freq. in channel 'C' or 'd'. Rotate the VFO knob
(don't press any buttons yet!) to select TX freq. Press
<M.IN> to end.

Mine works in the standard Motorola repeater fashion - I decode the PL on the receiver
for access to the machine. It is then filtered out in a high-pass filter.
A PL encoder generates a clean PL for the repeater transmitter (same frequency
as the input). The repeater transmit PL is on all the time, even though
I guess I could use a controller I/O to disable it on request. I just never
felt the need to.

I just bought three Icom replacement inserts made by W&W Associates.
They seem to use hot-melt glue. The Dow Silicone is great for
marine applications, but the acid is not good around contacts, and
the stuff does not stick very well to smooth plastic like
would be on a battery. It's really a sealer, not a glue.

Geoff I have been using a Icom 736 for a year now.
One of the first that was imported to this country.USA
First and formost throw the hand mike in the garbage.
I am now using the SM-8 desk mike. It does the job if not a little to well.
Don't over drive it. I have had many compliments on the audio.
Averaged about 75 contacts per hour last field day on 6mtrs.
Not sure if it is the radio or just my call sign but never have had a problem
breaking a pileup with just the 100 watts.

I used HostmasterII but didn't like the lack
of features. Talking with others convinced me to try Kagold.
I use a Kam+.

Enjoyed it so much that when I added a PK232 to my setup
I ordered a copy of PK gold.

1798. Radio Shack HTX-212 mobile manual

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-12 17:48:30 UTC
From: shamrock@buffnet.net
Message-ID: <3jvc5e$6is@buffnet2.buffnet.net>
Source record: 219777

Radio Shacks newist 2-mtr mobile..seems like a good rig..but its manual and Qiick reference card are a bit confusing....especially the quick reference card......

The very first thing you'll probably want to do is disable the factory presets..."the automatic repeater offset defaults are nice unless you live in an area that has repeaters that don't exactly match Radio Shacks interpretation"

It so happens that I live on the US/Canadian border and one of the most popular repeater freq is 145.190 -offset.and was going to be my #3 mem channel.....the first two Rptr freq programmed fine.. but the radio would not ALLOW me to program 145.190 as a rptr..I could get it to work as a long as I stayed on that memory channel..once I moved off it it reverted back to a simplex designation. A this point I was ready to pack it up and return it to the store. I read a little deeper into the manual and saw a section on expanding the transmit freq range..".into MARS and CAP freq" <ref page 17> but it didn't mention about changing factory defaults...I tried it anyway and it worked so now I have control of the radio not radio shack..turn to page 18.

########## ########## CAUTION ##

READ ALL THE FOLLOWING BEFORE ADJUSTING YOUR RADIO.....
BECAUSE if you do eliminate the factory default settings and then decide to reset back to factory settings.. YOU WILL ERASE ALL YOUR STORED MEMORY WHEN RESETTING BACK TO "FACTORY".<ref. pg 17>

##

TOP OF PAGE 18 it tells you how to "expand transmitt freq coverage" they don't tell you but it also allows you to set your own repeater offsets into memory channels by ..... Turn Radio OFF...then while DEPRESSING both the "F" and "DTMF" buttons..... TURN ON the radio....

To reset the radio" BACK TO FACTORY PRESETS" <and limitations> Turn radio OFF and While Dpressing both the "F" and "TSQL" buttons...TURN ON the radio. <Pg 17>.

If you live in an area that the repeaters ALL fall within the Freq. Offset Defaults listed on page 26 of manual then the factory automatic settings are a really nice feature of this unit...

This is just what I have found does anyone else have any other info on this radio....good or bad ??
or any other mods ?

>some comments about it.

I'm not familiar with the Icom P2AT but I have a Kenwood 22AT. I am very, very happy with it. I do not have any mods for it and haven't seen any. I would assume it is possible to modify it but don't know. I don't think either would be a bad choice. My advice is to consider how you will normally ues the unit and if there are any specific needs that one or the other will address. The one thing that I miss on the Kenwood is a backlit pad. Other than that it is fine. Yes, you have to read the manual to be able to use the fine points, but that's probably true with most radios today that have many many features programmed in them. I personally don't need paging at all, but I can imagine there are many people for whom that would be the difference between buying it or not buying a radio. Personally, had I to do it over with, I would not get a 2 meter only radio.I'd purchase a dual band hand held for both my wife and I and then use the car dual band as a baby repeater. Good luck

Hi Jeff:

I have used WW Associates Battery Packs for about five years now and have found them to be OK. They
don't last forever, but what does.... They do use glue for the spacing material. On my old Icom 2AT's that
is OK... No problem.

I considered using Periphex the last time that I upgraded my packs, but they were much more expensive. I
figured it was not worth it..

Good Luck.

check the software box again. i believe Microsoft dropped 286 support
at 3.0. you'll need to find a copy of 3.0 to use your 286 with windows.

and there is that copyright issue to deal with even if it did work.
may want to check into new motherboards for the 286..if you can make a
swap without having to buy all new memory (the item that makes a lot of
trades not cost effective), swap motherboards.

1808. Motorised Coax Relays

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-12 20:17:57 UTC
From: tgold@microvst.demon.co.uk
Message-ID: <795039477snz@microvst.demon.co.uk>
Source record: 219789

I have often seen rotary motorised coax relays at swap meets and hamfests and have wondered whether they were useful. They always come "as is" with no data, although the label usually warns about 24 or so volts requirements.

Well, yesterday I succumbed to a very clean four-way relay labelled Radiall Type R582964 (and says 24Volts). If anyone has a Radiall data sheet, catalog description or a fax number for them, it would help. I believe that this was a French company that was then acquired by a U.S. concern.

Has anyone managed to get any use out of such units? If so, what is the theory of operation? Does a microswitch disconnect power to a rotary motor, or are these essentially stepping devices?

This seems like the ideal way to get multi-band performance out of LDF5-50 or such without the cost and weight of mutiple runs.

Any help greatfully received.

I've got the Kenwood. Great little radio for reception, but the little antenna sucks for decent transmit, which can be fixed by hooking it up to a J-pole or an extendo-antenna (but, then the sensitive receiver breaks squelch "earlier"). Accessories are big bucks, but I am real pleased with the radio. If I had to do it over again, I would buy a dual bander with AM receive. If you do that, you won't have to "do it over again". Better yet, buy a tri-bander; I just wish somebody made a 144-220-440 dual bander. 73s, Rick

KA-Gold is superior to Hostmaster in a variety of ways not the least of which
include advanced conferencing, online help system, clipboard
cut and paste of text, etc. Bottom line, buy the KA-Gold there is
no way you will be disappointed. I do not work or represent
Interflex in any way, I am just a very satisfied customer.

1815. Kenwood filter compatibility

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-13 01:24:14 UTC
From: jptaylor@earth.execpc.com
Message-ID: <3k06ru$25d@homer.alpha.net>
Source record: 219794

I am looking for information on filter compatability for Kenwood radions. Specifically I am planning to install a 500 Hz. CW filter in my TS-440. The manual specifies this as a YK-88C filter. I have located a YK-88C-1 filter which I believe is for later radios; perhaps the TS-450 etc. The YK-88C-1 filter is configured with the filter mounted on 'daughter' board which plugs into the radio. The TS-440 requres that the filter be soldered directly in the radio. Can I remove the filter from the YK-88C-1 daughterboard and install it in my TS-440? Since they are both 500 Hz. filters, I guess my only operational concern is whether they are both positioned in the same place in the IF passband. As I have no information on the TS-450, or whatever radio uses the YK-88C-1, I have no way to confirm this. I can only guess... does anyone know?

Tnx es 73,
Jim, K9JT

1816. Sangean ATS-803A for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-13 02:06:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.8073.3289.0N1D5257@canrem.com>
Source record: 219697

Hi. I have a Sangean ATS-803A general coverage receiver for sale. Its
the same as the Realistic DX-440.
Its a portable general coverage receiver that receives 150 KHZ-30 MHZ
continuous coverage, receives am sideband and cw, also receives fm and
fm-stereo from 88-108 MHZ.

- can be run from wall adapter or batteries
- internal, telescopic whip, or can be connected to an external antenna
- din plug can be used to hook this radio to a tape recorder,
- with headphones or with your stereo (through the radio's 1/8 inch
headphone jack) you get FM broadcasts in stereo
- rf gain, bfo, bass, treble, balance, and volume controls
- ten memories for your favorite stations
- direct frequency entry via number keys 1-0
- can tune in steps with knob or up/down keys
- will scan for stations/signals
- built-in clock with alarm
- lock switch prevents accidental key presses
- also has narrow/wide receive switch for narrowing bandwidth

I have the radio, the manuals/paperwork for the radio, and the
wall power adapter for the radio. Unfortunately, I cannot
sell the radio with a pair of stereo headphones, but all you
need are your standard walkman type, or anything with a 1/8 in
plug.
This radio is in fine shape, except for a broken telescopic
whip antenna which needs to be replaced. (most of the antenna
is there, but a couple of the end sections broke off a year or
so ago)
Reason for selling: I have one of those great little Sony's,
so don't need this radio.
I'm going to leave the asking price wide open on this radio.
I paid $275.00 a few years ago for it, but have no idea what
they're going for used these days.
Please reply via any of the following methods:
Internet: email to chris.smart@canrem.com
Fido: netmail to 1:229/15
Rime: private/routed mail to ->crs
Phone (voice): 519-756-9389, (just leave a message if I'm not

1817. Ham gear for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-13 02:06:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.8071.3289.0N1D5255@canrem.com>
Source record: 219698

Hi. I have the following equipment for sale. If you are interested in any of the following, want to make an offer, ask for more information, and so on, here's how to contact me:
Mail addresses: Internet: email to chris.smart@canrem.com, Fidonet: netmail to 1:229/15, Rime: private/routed mail to ->crs.
Phone (voice): 519-756-9389 (if I'm not around, just leave me some voice mail)

1. 15-20 amp power supply.
I have a 15 amp homebrew DC supply for sale. This thing is better built then most of the commertial supplies I've seen/used, is very solidly constructed, doesn't get more then slightly warm when supplying 15 amps at 13.8 volts DC.
I didn't build it, but I can certainly atest to its high-quality. The four big transistors at the back are rated at 5 amps a piece, so it'll probably put out close to twenty amps if pushed. DC voltage is also variable; (currently set to 13.8).
I'm looking for about $80.00 Canadian funds for it, since its in absolutely great condition, and was hardly used. (price is negotiable)
Reason for selling: I am saving up for a decent acoustic guitar, a dualband HT, and other things.

2. Ten-tec Argosy II

Yes, I'm parting with it, after 6 years of great performance.
Features: extremely small solid-state rig; great beginner radio for people with a low budget, perfect for mobiles, a great backup rig for emergencies or up at the cottage.
- 5 or 50 watts ssb and cw,
- transmits upper and lower sideband, cw, (automatically ofsets transmitter when switched over to cw)
- transmits and receives on 80, 40, 30, 20, 15, and 10 metre bands. (10 m is split into four band selections, 28.0-28.5, 28.5-29.0, etc.)

- great notch filter for eliminating carriers
- digital readout for frequencies, power/swr/signal meter,
- comes with Ten-tec power supply, d-104 desk mike that looks aweful but is a perfect match with this radio,
- also comes with voice readout for frequencies, (great for white-caners like me)
Reason for selling: I'm just not interested in keeping this thing around any more. I have almost lost all interest in HF, and will buy a better radio when I get back into the low bands. Furthermore, as I mentioned above, I need the money for other things.
History: For the first year after I purchased this radio, I was

constantly replacing fuses in the power supply, and the radio was pretty warm even with almost perfect swr readings. Then, the voltage regulator went for good in the power supply, blowing the two big transistors in the finals. $138 later, the supply and radio were fixed, and I have had no problems since. No blown fuses, no overheating problems, etc. It works great, except for the following minor problems. The plastic knob on the
mode-change control can be removed by simply sliding it off its post. There is no longer a knob on the notch filter control, but this could be easily remedied. Also, the RIT control needs to be lined up again. In other words, when the RIT control is in the middle of its range (transmit and receive are on the same frequency supposedly), transmit is down the band about 1.5 KC's from where the receiver is. I just turn the RIT to correct this, but its annoying having to have it permanently set wrong.
I'd like $450.00 or best offer for this rig, power supply, voice readout, d-104 mic. I still have the manuals and paperwork as well. If you don't want the d-104, I'll probably just throw it out as its so beat up.

1818. Dualband HT HELP??

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-13 02:06:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.8072.3289.0N1D5256@canrem.com>
Source record: 219699

Ok, once I sell my small HF rig and power supply, I plan on buying a dualband HT. I haven't had any experience with any 2 m or 70 cm equipment for years. The last handheld I owned was an Icom IC02AT; I loved it. I'm looking for something with the following features:
- direct frequency entry via a number pad, (I can't handle those little switches or thumbwheels as I can't see the display)
- 4 or 5 wats output on 2 m and 70 cm
- a hot little receiver that doesn't get constantly overloaded with intermod (I'm in a city of about 80,000 people, so the intermod problems aren't extreme here yet)
- at least 10 memories per band
- CTCSS capability on both transmit and receive, (very important on receive)
- extended receive capability, (not just the ability to make the display go out of band on receive). This would get rid of the necessity for a scanner to monitor the weather stations and a few other frequencies.

Also, what are the battery options on HT's these days? It would be nice to get something better then a nicad pack, such as the NiMH batteries available in most notebook computers these days.
Oh, by the way, I was originally considering just getting a 440 MHZ rig to avoid the conjestion and interfearance on 2m, but I figure I may as well just get an HT with both bands for what its worth.
Please let me know what you're using, approximately what its worth new, what you like/dislike about it, etc. Can you get antennas better then a rubber duck for these things that work on both bands?

Thanks and 73, ve3 sht.

: If you have that, please send me the diagrams or the info.
: Thanks.

You don't need any IC to Am the carrier. Just put an audio transformer in the collector circuit of the output stage, and feed it half the power of your output stage. Then do the same with the driver stage to get 100 percent modulation.

The MC1496 balanced modulator chip will modulate while suppressing the carrier.

>
>--
>Guy Shechter
>Johns Hopkins University

Guy,

The TS-450S has an internal control relay that uses the REMOTE 7-pin DIN connector on the rear panel to control a linear amplifier. Pins 2 & 4 are the normally open contacts on the relay which close during transmission. You should be able to connect these pins to the amplifier chassis and control line connector. If you plan to connect the amplifier ALC output back to the TS-450S, use pin 6 and ground.

I used my TS-450 connected this way with a home-brew 8877 amplifier with a vacuum relay with no problems at all.

DIN connector pinouts:

1 - Speaker Output
2 - Control Relay moving contact
3 - PTT circuit for foot switch
4 - Control Relay (Normally Open Contact
5 - Control Relay (Normally Closed Contact)
6 - ALC Input
7 - Outputs +12VDC on transmit (Maximum 10 mA)
Shield - Ground reference

Good Luck

1825. Multi-way Rotary Coax Relays

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-13 11:53:55 UTC
From: tgold@microvst.demon.co.uk
Message-ID: <951331@microvst.demon.co.uk>
Source record: 219708
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,sci.electronics

I have often seen rotary motorised coax relays at swap meets and hamfests and have wondered whether they were useful. They always come "as is" with no data, although the label usually warns about 24 or so volts requirements.

Well, yesterday I succumbed to a very clean four-way relay labelled Radiall Type R582964 (and says 24Volts). If anyone has a Radiall data sheet, catalog description or a fax number for them, it would help. I believe that this was a French company that was then acquired by Transradio, a U.S. firm.

Has anyone managed to get any use out of such units?

This seems like the ideal way to get multi-band performance out of LDF5-50 or such without the cost and weight of mutiple runs.

Any help greatfully received.

>
>73, Jeff
>

Jeff,
My Periphex experience follows:
I bought a battery pack from them for my IC2AT that had a 1200 mah
rating. I charged the battery and put it on the radio. It didn't
last long, so I decided to test it. I charged it again using the
ICOM desk charger. I put a resistive load on it with current and
volt meters. The fully charged battery lasted a few minutes
at a 1200 ma discharge. I called Periphex, and they claimed I had
a bad battery charger! I then used a lab current regulated supply
to charge the battery and repeat the test, with the same results
when I discharged the battery.

I called Periphex and they told me I could NOT return the battery.
Fortunately, I had charged the purchase to my Master Card.
I told them that I WOULD be returning their defective battery.
I called the Master Card folks, sent MC a letter stating what happened,
and the charges were dropped from my MC card. I bought a battery from
another company that sold replacement batteries, which worked great.

>

Just got a Z1A last week. So far, it's a good unit, aside from the usual problems with ICOM- if you want an AA battery pack, or a case, the dealers don't have them yet. Extended RX opens up by holding down # B and powering the unit up. It receives the things I'm interested in, so I haven't pushed it to see what the limits are. The detachable head works well for field operation, but if you're going to be programming the unit, you'll end up putting the head back on the body- it's a pain in the ass to hit the function key on the head and then another key on the main keypad if the head is detached. Same goes for autodialers- you need access to both parts- holding down PTT on the control head, and hitting the digits on the main keypad.

The knobs on top are a little strange. You have 2 knobs for each band. The lower one is squelch- makes sense. The top one normally is frequency. When you push the VOL button (on the side, above the PTT switch), the top buttons now control volume- kinda funky. You have your choice of modes for this "feature"- you can have this function toggle, hold for a few seconds, or only work while the VOL button is held down- that's the way I've got it set.

I got (finally) a spec sheet from Standard on their new not yet available (they hope by Dayton) 3 band unit- 144, 440, and 1.2GHz. Dismissed this unit as a bad joke- output power on 1.2GHz is spec'd at 35mW. That won't cut it on 1.2- so I'll continue to carry one unit for 1.2, and the Z1A for 2/440.

Why not the delta 1? It's a bit too big, uses strange batteries, and 1.2 has yet to catch on in most of the country. For travel, 2 and 440 are enough, and size is a premium when I travel.

So why not the Yaesu 51 rather than the Z1A? I like the detachable head on the Z1A. I also like the fact that I can run 12 volts directly into the Z1A where the Yaesu is limited to 9.6. The 51 is a bit smaller than the Z1A.

Cheers-

1838. PTT with VOX headset? How?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-13 23:18:12 UTC
From: kreifels@intel.com
Message-ID: <kreifels.795136692@fmwu23>
Source record: 219720

Folks,

I am trying to set up my FT-530 for motorcycle mobile. Finally
got the adapters rigged this weekend to try the headset I had reserved.
Results: Works on Vox. Now how do I make it work as PTT?

I tried simply putting a switch in the hot lead to the mic, but
when closed, it didn't key the rig. What other components do I need to
add?

For background info, I have only measured the mic resistance
with an ohmmeter so far. 1.42Kohms. I would like to add the PTT
feature without _internal_ mods to the headset, as it also works my
wired intercom for the MC.

Any help appreciated.

1839. Adjusting ext. mic sensitivity, FT-530?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-13 23:23:10 UTC
From: kreifels@intel.com
Message-ID: <kreifels.795136990@fmwu23>
Source record: 219721

Folks,

I am adapting a headset to my Yaesu FT-530, and when I tried
it out, I was told my audio is distorted, I should back off from the
mic. Unfortunately, I'll put this in a motorcycle helmet, and won't
be able to back off, so I need to reduce the mic input to the rig,
or reduce the rigs sensitivity to the mic.

First question: Does anyone know of a way to reduce the FT-530's
external mic sensitivity? Is there some software key sequence to
adjust this perhaps? Barring that, is there an internal adjustment
I could make?

Second question: If I can't reduce the rig's sensitivity to the
mic, what circuitry can I add to the mic itself to reduce the input to the
rig? Presently, I only know the mic's resistance at 1.42Kohms. I'll
be measuring the capacitance in the next couple days.

Suggestions? I'd like to hear them. Thanks and 73.

HI..
Yep, got one of those myself.. So mint, the buttons are still stiff.
Best front end an ht could ever have.. Need a spare battery tho. One
of mine fried inside, burning the charging circuit. Works ok but can't
go in the quick charger... I have a brand new set of cells for it if

some one would have one that won't hold a charge they would consider
letting go. First radio I personally owned for the hobby. I think
it's a fixture here..

W&W Associates. They probably have an identical battery
for around $45 to $50.00.

I forget the number. They advertise in the back pages of QST
and most other ham magazines.

1849. IC-735 offsprings

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-14 12:20:24 UTC
From: marijan.miletic@ijs.si
Message-ID: <1995Mar14.122024.1770@cathy.ijs.si>
Source record: 219659

I am proud owner of an early model IC-735 which I bought 10+ years ago because it had LCD display, local network type computer interface and decent radio. It survived decade of tough contesting, including RTTY. I only changed driver transistor twice (it was factory fault to begin with but I beleived JA specs for 50W output on 10m). I never used all of IC-735 12 memories but stored relevant data in MB/GB of computer memory!

When IC-737 appeared, I received circuit diagrams from ICOM USA and I was amazed to see signal path being exactly the same as in IC-735 including 9 MHz notch filter which leaves a lot to be desired. PLL has been simplified thanks to DDS technology and noise performance measured by RSGB are outstanding.

So let us say: IC-735 is dead, long live IC-738...
(although I am curious about IC-775 DSP xcvr).

1850. Ten-Tec Scout to Linear

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-14 13:01:01 UTC
From: lstolz@freenet.columbus.oh.us
Message-ID: <3k442d$bge@acme.freenet.columbus.oh.us>
Source record: 219730

Has anyone tried connecting the Ten_Tec Scout to a linear Amp?
I'd be very interested in the technique involved. Ten-Tec has a
internal jumper in the PTT line that can be used for it, but I am
not sure if they mean for it to be used to drive a relay, or if it could
be used to key the relay in the amp for switching.

Another thing I have run into with the same problem on a TS830S is that
the carrier oscillators may need tweaking. I reset the LSB, USB, and CW to
spec and got a lot more output. The trouble was that they were so far off
freq. (after more than 10 years of ageing), that after mixing they were off
to the side of the filter passband.

In a message dated 03-09-95, gary@ke4zv.atl.ga.us said to All:

gary>very useful. And only 12 memories? You mean it has memories? Whatever
gary>for? I don't need a HF scanner.

Surely you can see the usefulness of having plenty of memories available.
We all have our favorite nets and ragchew frequencies, and it's nice to
be able to spin through them quickly to check for activity. Add a couple of
your favorite shortwave stations, the WWV frequencies, a ten meter
repeater or two, and several beacon frequencies for checking propagation,
and it's not very hard to fill up 40 memories. While I do think that
the 100 memories on my Kenwood IS a bit of overkill, I'd rather have
them than not.

I do agree with you though; the Icom 735 is an outstanding rig.

Message-ID: <3k4q45$p3v@miranda.mti.sgi.com>
Source record: 219739
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I've been a pilot for a few years now and recently got into ham radio.
I am interested in buying a handheld that can TRANSMIT and receive in both
AVIATION and ham frequencies.

While a number of handhelds receive AM (aviation is AM), they are unable to
transmit AM. This includes a few brands that are CAPS modifiable.

I was wondering if such a handheld unit exists or whether a knowledgeable
person was able to homebrew such a radio from an existing product.

Message-ID: <3k4sli$kes@usenet.INS.CWRU.Edu>
Source record: 219740

Just bought one of these nice handheld Yaesus. Really nice radio
and I think I made a wise choice by buyin it over the new Icom
dual bander and the Kenwood TH-79A. The display shows a lot more
than either. Okay, on to the question: Are there any mods for this
radio that can either expand transmit or receive? Any other mods out
there? I heard of a soft-mod that opened up other feature but have not
been able to find it. I did check the QRZ? web site about a week ago to
no avail.

Also, I am having a problem with the radio. I cannot figure out how to
program the #9 autodialer memory. The standard way of programming the
other autodialer memories does not work. My #9 reads 97ADD .. Why?

Howdy!

Recently I found myself in possesion of a Collins 1944 TCS-12
navy transmitter and receiver outfit. It consists of about 5 large parts,
and _appears_ to be in good working order, but missing a power supply cable.

I'm curious if anyone would have any suggestions where I can find
literature concerning this equipment. I'm looking for information
regarding the power supply (how it works), the possibility of changing
the crystals (with a tech license I would not be able to use it on
its current frequencies) and finding spare parts (esp. the missing cable).

Thank you.

Well if this is all you will really want to do I'd build a crystal
oscilator for one of the frequencys of intrest. Actually at about 1/12
the frequency of intrest. Then use a harmomic to tune the radio. If you
just want to do this onec use the Local Oscilator from a scanner as your
source. Either of these would most likely be a more stable source than
one of he cheap generators. Maybe even ask around and get someone that
has a generator to help you.

Hello!

I was asked to post a message for a friend of mine who is not on the Internet:

He is attempting to restore his old HeathKit DX-20, which was his first rig.
Unfortunately he does not have the manual or schematic for the transmitter.
If anyone has either available for that particular radio, please e-mail me at
treit@seanet.com or send the information to:

George, K7BDU

1869. IRCI Filt in TS-820S

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-14 23:27:20 UTC
From: josh@asl.hitachi.com
Message-ID: <3k58oo$odf@sol.asl.hitachi.com>
Source record: 219647

I recently installed an IRCI 400 Hz CW filter (8.8 MHz IF) in my TS-820S. It seems to provide sharp selectivity, but I notice that it seems to have a fair amount of attenuation compared with the original SSB filter: with the xtal calibrator signal, the peak obtained within the CW filter is about one S-unit below the peak obtained within the SSB filter.

In the old days, an S-unit was 6 dB. Is this okay, or can anyone suggest whether there may be a fault in the CW filter or in the Kenwood?

Hi Sivaran,

I do not believe there is a handheld that works in the amateur bands and also in the aviation bands. As you have already discovered there are many amateur FM hand helds that will receive AM signals in the aviation band. There are none that will transmit there also. The reason for this is that none of the ham handhelds are type accepted. Any transmitter used on the aviation frequencies must be type accepted.

Bill

1874. Icom 281, slight intermod? :(

Newsgroup: rec.radio.amateur.equipment

I was hoping to find an intermod FREE radio, and I had the opportunity to buy a 20 day old Icom 281 for $320 so I jumped on it.. Playing with it I am finding intermod on it sitting at the house with a 3db gain omni antenna.. :(Does it not have the great filtering that a lot of Icom radios have? I have a friend with an Icom HT that gets NO intermod, and this one is obviously recieving a bit... Not terribly, but I am afraid it's going to be bad downtown where intermod is terrible..

Someone let me know if you've noticed this as well.. :(

I am partial to the Comet antennas. Mick Zwertnick at Comet can help you with the selection. I put Comet, Diamond and Larsen mobile antennas on the range and the Comet came out on top.

I have a Comet tri-band on the trunk lip of my car. I've been very pleased with the overall performance.

Yes you could but you couldn't legally use it as it woulnd't be
type-accepted for the aircraft bands.

1877. ### HTs and their Batt Packs...

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-15 06:48:46 UTC
From: s2202629@np.ac.sg
Message-ID: <3k62ke$j0i@nova.np.ac.sg>
Source record: 219658

I'm about to purchase a HT (my first), and I was wondering about their batt packs & chargers...

Basically, most HTs nowadays come with a high cap batt pack, a AA alkaline pack (6 or 8), and a lot of other stuff as 'optionals'.

I was wondering, whats 'good' about getting a batt pack? Would it be better if I just got a AA alkaline pack, and put in AA nicads instead? They sure seem cheaper, as well as AA nicad chargers cost far less than a charger for the HT itself... (Not to mention, I can use those nicads in whatever other appliances I might have...)

Am I making sense to anyone here?

1878. Ham shop in Chicago needed

Yes, you can stuff AA nicads in a AA shell, but consider these points:

- The shell has no fused output, so if you accidentally short the output terminals together, the battery pack wiring and/or cells will get hot enough to melt the plastic. Sealed battery packs typically incorporate a fuse of some sort to minimize the risks when the output terminals are shorted.

- The contact I*R drop will add up. For example, I have the battery shells for my Yaesu FT-530. I discovered that although I put new and fully charged cells in the shell, the output voltage sagged considerably when I transmitted on high power. In probing with a voltmeter, I discovered that the sag was caused by the cumulative I*R (current times contact resistance) drop throughout the shell. On the Yaesu with a clamshell design, six cells plus the contact joining the two halves together yields 13 points in the battery pack where contact resistance voltage drop occurs. In a pack where the cell contacts are tack welded together, this I*R drop is considerably lower, if not negligible.

As an experiment for this second point, I soldered wires onto the ends of some older but still operating (well, BEFORE I did this) cells. I discovered that the I*R drop was no longer a factor. However soldering directly to the ends of nicads tends to damage them. Ugh.

1880. Ground Rod

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-15 15:35:11 UTC
From: Steve Murdock <murdock@graceland.edu>
Message-ID: <3k71ff$no7@insosf1.infonet.net>
Source record: 219662

I have moved my HF rig (Knwd 440, 100 W, no linear) to a temporary room for 4- 8 weeks while I repair my basement walls, and need to put in a temporary ground rod that will have to be later removed. Can I just bury an eight ft section of 3/4 in copper pipe ~18 in underground HORIZONTLY ? I've never heard this suggested, so it seems something must be wrong with the idea. If anyone knows why this would not be significantly better than no ground, please let me know, either e-mail or, if of general interest, reply here.

Tnx

I heard recently that the type-acceptance was no longer an issue, and that
as long as you were licensed to operate on all the frequencies, you could
do so with the same piece of equipment. Is this rumor? Does anyone know
for sure?

> be able to back off, so I need to reduce the mic input to the rig,
> or reduce the rigs sensitivity to the mic. [...]

You could put a pot in line as a voltage divider but I'd check the headset microphone plug first. The FT-530 uses a 3-conductor jack. I once bought an MFJ mike (because I was stupid), that had a two-connector plug and put out "hot" audio on the FT-530 (It was OK on the FT-416). That happened because the electret microphone was getting wonked with higher voltage from the third pin of the '530 (This third line is used to power the Yaesu display mike).

If I recall correctly, the microphone should see 4.5-5.0 V. If you find it is getting more than that (perhaps close to the battery voltage), you're probably picking up the third power line. Replace the plug with a "stereo" (three conductor) jack (Unless it's an MFJ product -- in which case, save time by throwing the whole thing out now).

Source record: 219680

MAC>A local ham has been plagued with RF feedback, especially on 80 and
>20 meters, in his TS-930 HF transceiver for years? He even borrowed
>a second rig to compare with his, and it, too, had the problem, so
>he concluded maybe his problem was caused by something wrong with
>his antenna or maybe with his ground or maybe ....

Have him attach a dummy load to the '930 and see if the interference
persists, if it does, then there's a problem in the rig. If not, the
problem could be one of serveral things:

1) Bad (rotten) grounds at one (or both) end on coax jumpers (e.g.
failure to SOLDER the shield to the PL-259, loosely attached
connectors, etc.)

2) Antennas too close to house and radiating RF directly into the AC
lines or possibly the rig itself. I have this problem when I
operate on 40M with a KW.

3) RF appearing on the OUTSIDE of the shield of his coax.

Use a good quality BALUN or (better yet) a ferrite bead RF choke
(a la W2DU balun) OVER the shield of his coax to choke off any Rf
which appears on the outside of the shield/

MAC>Have other hams had feedback problems with the TS-930?

Not since I put ferrite loaded RF chokes on ALL my coaxes!

You won't find one that is both, I don't believe. As you know the aviation freqs operate AM, and have to type accepted for that use. I have yet to see one company that offers any FM features in one of their aviation band handhelds.

If you're using your own aircraft, you should invest in getting a 2m rig in the aircraft. Even if you use a handheld with an amp.

> other autodialer memories does not work. My #9 reads 97ADD .. Why?

The instruction manual is a bit obscure on this point. Register
#9 (apparently) can't be programmed from the keypad. Instead,
it decodes the tones that the radio receives (you may need to
be in "auto dial mode" for this to work. New stuff comes in
at the right of the register and is shifted left.

Hope this helps. 73 de Bill KE6RLG

Really amazing. I talked to a fellow today on the local repeater who
was using a HTX-202. He had a watt meter hooked up and was getting
just over 6 watts on 13.8v.

I have the FT-5200 (just like the 5100 but with detachable front panel). It's a good, reliable rig, but it really suffers from intermod in some urban areas. (The rig is useless in "Intermod Alley" near Tyson's Corner, VA in the DC suburbs.) I feel that the controls are not very intuitive. They're also very small and impossible to see at night. However, these complaints are probably true for every other dual-band rig on the market today.

On the plus side, I've had good reports of TX audio, and the ability to pick up WX broadcasts has been a big help.

[snip]
>voltage), you're probably picking up the third power line. Replace
>the plug with a "stereo" (three conductor) jack
[snip]

I already have a stereo plug into the FT-530's mic jack. As far as
your suggestion for a series pot, would this be simply adding a
variable resistance in series with the mic's hot lead, or is
there something more subtle to it?

As far as the hot mic, I think the problem is simply that I have to
be too close to the mic in my application. I will be trying some
added series resistance to get the 2.2K I think I need at the terminals
to trigger the PTT, so I'll see if that cuts the mic input somewhat.

Thanks, and 73.

>voltage you'll have to key to ground to actuate the relay).

Tom is right. Be careful! The REMOTE connector on the 450 has a control relay output. Pin 2 is common. Pin 5 is shorted to 2 while in receive. Pin 4 is shorted to 2 while in transmit. Note that the DIN pin numbers are NOT sequencial around the connector. Make sure you know the DIN numbering. Also, pin 7 will have 12 volts while on transmit and will supply 10 mA. I do NOT have the voltage or current ratings for the relay. I would not expect it to handle 100AC. The schematic definitely shows a relay, but no more info. Maybe Kenwood can help you out with a new manual and further assistance.

: --

: Tony - G3SKR / AA2PM / tgold@microvst.demon.co.uk

Tony,
I have used these types of relays for many years. They give good
service. All I have done is to build a control box with a surplus 24V
transformer and a inline pack bridge rectifier and a switch. You need to
experiment with it. The toughest part to get is the canon plug on the
unit.

>: IS THIS TRUE ABOUT UHF?????

I got my radio license specifically for a "hiking" trip down in Argentina climbing Aconcagua along with three other members. We got dual band Kenwood TH-78A's along with Argentinian and Chilian Ham Licenses. We used VHF exclusively and it worked great even around
corners (mountain ridges) but we had a backup UHF frequency if things weren't working for us on
VHF.

>: I've also heard that some 2m and dual-band HT's can be modified
>: to get a lot of out-of-band reception.
>: WHICH RADIOS DO THIS???

Ours were modified and this was beneficial as the rescue team on the mountain used a frequency just out
above the U.S.A. VHF Ham band. Because of the mod we were able to talk to them after talking to them in
person first. They liked the radios so much they bought all four of them from us. (and we have now bought
Kenwood TH-79AD's).

>: HOW BROAD IS THE RECEPTION???

>: HOW SENSITIVE ARE THEY OUT-OF-BAND AND ARE THE FREQUENCY
>: STEP SIZES CORRECT???

>: DO I WANT A BATTERY FOR MAXIMUM POWER OR AM I BETTER OFF
>: WITH ONE THAT PROVIDES MAXIMUM OPERATING TIME???

I took along the standard Ni-Cad, a AA-Pack (Lithium) for back up, and a solar panel/baterry
charging/hi-power/longevity (but heavy) unit. Depends on your needs. Have both for the radio and
pick depending on the type of hike you are going to take.

Happy Hiking,

Matt Nilsen

1913. KWD TM-221a/321a/421a battery replacement.

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-16 15:11:11 UTC
From: spkatzmann@ccgate.dp.beckman.com
Message-ID: <spkatzmann.14.000F3032@ccgate.dp.beckman.com>
Source record: 219606

I had to replace the lithium memory backup battery in my TM421a recently. I thought that it would be simple to do. I took the case apart, found the battery on the board in the front panel area and desoldered it from the board. Easy enough. I then called the local Kenwood parts center to order the battery since it would also have the solder straps convienently attached. They said it costs $13.47 + $6 shipping! Twenty bucks for a common 2032 size lithium battery - I thought! No thanks, I said.

I couldn't find the identical battery with solder straps anywhere. So what I did was buy a CR2032 coin-sized lithium battery replacement for $2.79, and a small holder for $1.99 at my local radio shack. Both were less than it would have cost for the shipping on the Kenwood rip-off battery. I soldered some leads from the battery holder to the spots on the circuit board where I had removed the other battery. I then found a nice place near the front panel and used some double-sided tape to attach the holder with the battery in it.
I had to slightly modify the holder so that the bottom was flush. Works fine, saved a bundle, and it will be much easier to replace the battery next time since it's not soldered in! I also plan on doing this on my 221a and 321a when their batteries die.

Anyone else have similar experiences with the mem. backup battery?

I have a IC-281 also. In Las Vegas the intermod nead downtown was
so bad that I just turned the thing off. My FT-2400 has been in the same
area with much less of a problem. I think part of the problem lies in
the radio's ability to do 9600 baud packet right out of the box. On radios
that I have modified to do 9600 I usually have to change the IF filter
to something wider. The Icom most likely has a wide IF filter for the
9600 baud and you pay the price in intermod. Anyhoo that is my best guess

Well Im not from the ARRL but I can say that I wanna see the ads. I suppose they accept the ads cause Periphex manufactures and sells ham equipment. While it may be true that there are higher quality products available, its nice to see whats out there. If youre contemplating a purchase, you can always ask for experiences here. I did, and now there are 2 batteries on the way to me from W&W Associates.

So, why should QST not accept the ads?

1918. TS 940 fan problem

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-16 19:43:05 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <14292.795382608@safety.ics.uci.edu>
Source record: 219599

I have the 940, and the power supply fan had stopped. I noticed quickly, since the fan is audible. (My fan comes on slow all the time since I have bypassed the thermister for the low speed fan, keeps the whole thing cooler.)

Anyway, I took the cover off to check to see if voltage was getting to the fan. I turned the fan blade a stroke and the fan started up again, and has been running fine since.

Is an arbitrary non start a sign of an aging DC motor? Anyone buy a replacement for one of these for less than Kenwood's $25?

Type acceptance is still a very big issue. What doesn't need type acceptance is the amatuer radio equipment, but it must still fall within the purity constraints.

So, if you found an avaiation handheld that would cover the ham bands, and it had FM, you could use it on the ham bands. I doubt there is such an animal.

Jerry,

I've done some of this. I put a 2-meter handheld on my K-100R/T
and drove that thing from San Jose, CA to Anchorage, AK and back.
That was in 1988 so things are a little hazy right now. The antenna
is still mounted on the bike as well as the PTT switch and all the
power and RF cabling. Let's see ... I think the antenna is a 5/8-wave
mounted on the luggage rack and I ordered the headset assembly from an
outfit in the midwest which specializes in that sort of thing for
motorcycle police units. I'll have to look it up again, but I was
quite pleased with its performance. I had a boom mike mounted on the
side of my BMW helmet and I tucked it up under the part of that full-
faced helmet which is in front of your chin. That way it was close to
my mouth and out of the wind noise. There is a hole that is in the
handlebar assembly near the clutch lever (I think there is one on the
other side too) that I put the PTT switch in - I don't know why that
hole is there, perhaps for some accessory. But it worked out so that
I could push the PTT switch without letting go of the left handle grip.
This is a VERY desirable situation.

I'm taking my Extra exam this weekend but when that's over I'll try
finding out who and where this company is in the midwest ... the name
Cycle-Com rings a bell, but I'm not sure about it. Anyway, I'll get
back to you next week on it. If you don't hear from me, send me e-mail
cuz I undoubtedly forgot (!).

Good luck,

Jim Johnson WA6SII

I am not a HAM but I have had this:

Kenwood TH-21AT Handheld 2-meter (?) Tranceiver radio
w/ charger and battery pack.

for about 6 years. It has had very litte use. Back then I was
thinking of experimenting with packet radio.

I don't use this so I might as well sell it. It does work and the
battery pack has been taken care of and is holding a charge real well.

For sale to the best offer.

Please reply via e-mail since I don't read this group.

Hello All;

I am looking for information about getting replacement parts for the Radio Shack discone scanner / ham antenna. I really like the antenna's reception by my antenna has developed a problem.

The plastic center insulator and the plastic disk that separates the disk from the cone are both cracked and broken allowing water get into the coax. I asked at my local Radio Shack store for those parts, but when they called into their parts depot in Barrie, Ontario, they were told that cannot supply those parts.

I have heard that Radio Shack buys these antennas from another company. If this is true, who makes the antenna? I heard it was possibly Diamond. Can any one tell me? And supply me with a address, phone / fax number for that company (really only the name will do, I can find the rest.)

Also, if there is anyone out there who works for a Radio Shack in the United States, can they get the parts I need? If so I am willing to buy 2 or 3 of each part (so I will have spares).

Thank you for your time.

Sorry Clark I haven't but I had a fellow tell me that he put in a 12 Volt
Muffin fan in it's place. Like the kind that you can find inside a PC
power supply. I looked at it to as both of my fans got noisy. But
I bought to NEW Kenwood fans at about $28 each. OUCH.
Sure is quite now. I like that. Anyway to mount the muffin fan in
there it would not be that hard, but would require a little mod to the
back cover.

lubecke@tumbler-ridge.caltech.edu wrote:

: I need some advice:

: I would like to buy a radio that I can easily carry with me while
: on extended hikes. I would like the radio to have broad reception
: so that I can tune in any local forestry, search & rescue, weather,
: or similar services. I would like one that can transmit reasonably
: well in a forested mountain area to reach "somebody" in an
: emergency.

: I've heard about the Icom 2sra, but they are rare and expensive
: when new, and I haven't found one used.

: I found a deal on an Icom 4sra, but I've heard that UHF isn't suited
: well to forested or mountainous terrain.

: IS THIS TRUE ABOUT UHF?????

Ummm. Maybe. I think the real issue is that in most (all?)
parts of the country there are fewer repeaters and fewer
radio amateurs on UHF than on 2M.

: I've also heard that some 2m and dual-band HT's can be modified
: to get a lot of out-of-band reception.

: WHICH RADIOS DO THIS???
Actually, nowadays many of the radios allow out of band receive
right out of the box, no modification required.

: HOW BROAD IS THE RECEPTION???
I guess you mean frequency range. Should be spec'd by the mfg
if the radio comes with out of band receive. Typically,
the radios with 2M will receive something like 117 MHz to
174 MHz. Things to watch for: does it receive the aircraft
band (some don't) and does it go all the way up to 174. FOr
hiking, you might want to listen to the Forest Service and
Park Service, whose freq's tend to be around 168 or 169 MHz.
Some HT's will not receive that high.

For HT's with 70 cm, the receive range is often 420 Mhz to
say 470 MHz.

: HOW SENSITIVE ARE THEY OUT-OF-BAND AND ARE THE FREQUENCY
: STEP SIZES CORRECT???
Sensitivity is not usually guaranteed but the radios
I have seem to work "OK". YMMV

Step sizes are usually programmable and not a problem.

: DO I WANT A BATTERY FOR MAXIMUM POWER OR AM I BETTER OFF
: WITH ONE THAT PROVIDES MAXIMUM OPERATING TIME???

I dunno. Either way, carry an extra battery pack.

I have a dead power module on the VHF side of my Kenwood TM-732. The module was mounted without the use of any "heatsink" compound. I understand that this is common in some new designs. The service manual does not mention if it is required. There is apparently "heatsink" compound beneath the UHF module. Was this an oversight on the VHF side? If so, it probably contributed to the failure. If you've looked 'round the inside of a 732, can you let me know what you saw? Thanks for the help. Please post relies to ko6ec@cris.com in addition to posting them here in the newsgroup. 73.

Source record: 219612

After reading the mod sheets at oak.oakland.edu, attempting to
perform the extended frequency mod only serves to make the BEEP
REALLY REALLY LOUD and does NOT provide extended receive as
specified.

PINS 28/29, soldered together, should be separated from
the capacitor via cutting the trace.

Then use a 10k resistor to pins 28/29 from +5 volts and you
should get extended rcv.

The 500k button doesn't work, although it never did, and I was
able to put it back together and return to its orig. state.

So WHAT WENT WRONG? Anyone else try and fail?

1939. Q: Difference between FT-51R and FT-51RH

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-17 12:04:08 UTC
From: fh@ap-pc818c.physik.uni-karlsruhe.de
Message-ID: <3kbtro$3kd@nz12.rz.uni-karlsruhe.de>
Source record: 219619

Hello and thanx for reading!

When I collected informations concerning the price of this Yeasu duoband handy, I was told that there are 2 versions available:

- FT-51R (lo power)
- FT-51RH (hi power)

The difference in price is approx 20$, but what is it in specifications? Allows the H version higher external voltages (>12V), or does it come with a "larger" (higher voltage and/or more capacity) battery pack?

Pse xcuse my English & vy 128 de ... Frank. Bye!

1940. Hypercard for Kenwood 950

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-17 12:33:57 UTC
From: drin@concerto.valrho.cea.fr
Message-ID: <drin-1703951333570001@193.48.14.32>
Source record: 219617

I'm looking for an hypercard stack for remote control of a Kenwood 950 SD rig.

This is a freeware stuff but unfortunely I didn't find it during my
surfing on various FTP servers. Any suggestions ??

My friend F6EPE had the same trouble with its 732E, no heatsinh and a hybrid module to change... .
In fact he opened the module and using a high power solder he was able to "repair" (but unfortunetely for a short periode) the radio.
My own 732 is working fine ...

Source record: 219622

Did you measure the filament voltage with the tubes in the sockets at the tube pins? In most HF amplifiers the filament wiring, choke, and transformer losses all contribute to limit inrush and filament voltage. If the voltage is high with the tubes in place measured at the tube pins (and if your meter is an accurate true RMS meter!!) you can lower filament voltage in the 200 only by adding resistance to the filament leads. You will need hundredths of an ohm so the resistance could just be extra hookup wire coiled up! GL Tom

>Is an arbitrary non start a sign of an aging DC motor? Anyone buy
>a replacement for one of these for less than Kenwood's $25?

It's common for AC synchronous motor fans to require hand starting when they get older. That's because there is very little starting torque available at zero RPM with a synchronous motor, and gummy or dragging bearings will stop it from starting by itself. Cleaning and lubing the bearing can restore normal operation.

With DC fan motors, bearing drag is generally less of a problem since a DC motor has a high starting torque. What usually happens is that brush and armature wear leaves "dead spots" where good contact isn't being achieved. If the motor happens to stop on one of these dead spots, you have to hand prop it to get it going again. The fix for this involves turning the armature on a lathe to true it, and fitting new brushes. That's generally not worth the trouble for a small fan motor.

There's another type of DC motor called a "brushless" motor. These are of at least two types. One is really an AC synchronous motor with solid state drivers built in. This can suffer the same dragging bearing fault as any AC synchronous motor. Cleaning and lubing the bearing may restore function.

The other brushless type uses a Hall effect sensor to detect rotor position and thyristors to switch the current to the different windings at the proper times. Thus it has the good starting torque of the brush type DC motor, and can also have the good speed regulation of the AC motor if it has a bit more circuit sophistication. If you have to hand prop this type, the electronics are damaged and it must be replaced.

Both of these types have the advantage of no sparking and arcing from brushes and armature which can generate "hash" in sensitive electronic equipment. This makes them the preferred choice for such things as VCRs and communications equipment. For small motors, the electronics

are combined into an IC that is encapsulated in the motor.

Now I don't know which type motor Kenwood uses, but if it is
a brushless type, $25 retail isn't a bad price for a quantity
one replacement part. (In large quantities, these motors are
little different in price from brush type motors, but you aren't
going to see that price break in small quantity purchases.)

Thanks, Tom. Yes, I measured the voltage right at the pins. I use a
good quality Belmerit dmm, and found the differences before the choke
and at the pins.

I ended up using some nichrome wire mounted on two terminal strips spaced
a few inches apart. I calculated what I would need, but of course was
not too close in reality. I temporarily mounted 3 parallel pieces of
the nichrome wire of about 3 inches and lowered the voltage at the pins
of the 572B from 6.55 to 6.05. I am happy with that.

I've done this a lot, and my advice is: don't. All the radio stuff is a big distraction. It's hard enough to ride safely in traffic without the added distraction of schmoozing on the radio. Also, you get important safety cues aurally, like horns, squealing tires, etc. You might not be able to hear them with 2 meters blasting in your ear. I carry my HT in my saddle bag, safely out of reach. When you ride, ride. When you want to ham, stop, get a soda, take a break, and chat with your friends on the wireless. My experience is, you don't want to mix the two. Best of luck, and ride safely.

1953. VHF amp low output mystery

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-17 18:55:18 UTC
From: jdc@cci.com
Message-ID: <D5LLw6.CBC@sunsrvr6.cci.com>
Source record: 219633
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

A friend has a 2-meter 120-watt power amp that appears to have very little gain. When measured with a SWR meter it shows about 1.2 times the input reading. Replacing a couple of the fixed caps with trimmers gave a little more gain, but not much. The input SWR is fairly low.

It draws 12 amps from 12 volts, about normal for that amp. It generates a lot of heat, too. There is almost no current draw when not transmitting; it is a class-C amp.

Based on the current draw it seems like something is going on. Could there be some terrible mismatch on the output? Perhaps all the power is reflected back into the transistors and turned into heat. After all, 12 amps * 14 volts is almost 170 watts, and it looks like we're getting 40 or so watts out for 25 watts in.

Any ideas? It was a $50 special from Dayton ("works great"), and it would be nice to get it going.

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Hi. a quick answer to your question .. No. there are no ht's that will cover
the range you want (in a city) by themselves. The amount of power you would
need would quickly kill a battery , and would slowly kill you due to the high
RF. generated so close to your body. ok. now the good news !
HAm Radio is the way to go! with the no-code lisence , you can get a book
at Radio Shack that has the questions and answers to the test ! you and your
wife can study this , go get your license , and get two HT's on 2 meters ,
and I am sure that you will be able to converse well over that distance by
using local repeaters. They are reliable , and almost all of them have
emergency power back-ups , because that's when you need them the most!
Sorry I can't be more help , but " that's the facts "
take care.

>
>Christophe
>
Hello Christophe,

I live in the Chicago area and know of one major ham shop located on
North Milwaukee Avenue.

Erickson Communications
5456 N. Milwaukee Avenue
Chicago, Illinois 60630

Telephone: (312) 631-5181

Hours of business: M-F 9-5:30 Sat: 9:00-3:00

If you are planning to visit the area, Milwaukee Ave is a major street in
the area that runs in a North-West direction from the downtown area all
the way out to the far suburbs. I have shopped at Erickson from time to
time and even bought my Yeasu FT-767 there about 5 years ago.

Good luck, Alan

1968. Advice to TS 940 owners

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-18 19:44:51 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <14875.795555804@safety.ics.uci.edu>
Source record: 219550
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Just finished my Fan project here on my 940. IF your fan is getting loud and is old, I might recommend a replacement motor (pretty easy installation) or at least a good single drop of teflon lubricant to the shaft. If it is old, I recommend replacement ($27 from Pacific Coast Parts) since mine just "stopped" without warning and since there is a thermal switch, I didn't know whether it was off because the power supply was not yet hot or if the fan was broken. Well, the motor just wasn't spinning up. Result: two shot pass transistors on the power supply and some down time and concern about my radio. The transistors are not expensive (well, if you have Kenwood do it they are more than double the going price, but $12 apiece for two of them is not a killer), but the heat generated can do other damage.

The other thing I have done to prevent future problems is to put a resistor in the thermister line to keep the fan running on low speed at all times. That way the power supply stays within a narrower temperature range for more of the time, AND I will KNOW if the fan circuit has a problem, since I won't hear the fan at all. This little mod was courtesy Tom, K2CZ, and involves a 2.2 K 1/2 watt resistor across the leads of plug 13 on the AVR board. (ONLY do this if you have some solid electronic knowledge and basic understanding of the radio, PLEASE! Don't hurt your radio or yourself!)

From: ponced@uclink2.berkeley.edu
Message-ID: <3kfdvg$9e1@agate.berkeley.edu>
Source record: 219551

Hi to you all,

I'm a complete newbie at all this radio stuff, so I decided to make a post here and ask the experts (BTW, if I'm posting in the wrong place please direct me to the right ngroup). Here is my dilema: I want to buy a pair of portable radios (like walkie-talkie type), one for me and one for my wife, so that we can communicate in case of an emergency (since we live in the San Francisco Bay area, we know that the BIG one will hit us sometime soon, so we are trying to cover all the possible bases before this unwelcome event makes its presence). I'm looking for something that might have a range of ~10-15 miles (any additional range is okay), battery operated with a charge lifetime of 8 hrs, possibility to communicate with emergency response sites, able to communicate with no problem from within the city (by this I mean no blockage from tall buildings and so), and reasonable cost ($200-$300 per radio ?). Is the above to much wishfull thinking?

I have heard that for some types of radios you need a licence. I would like to operate the ones I get without having to get one, if possible. Also, I have looked for your FAQ but didn't find it. Is there one?

Posts are okay, but I prefer email. I'm at ponced@uclink2.berkeley.edu or dmponce@physics.berkeley.edu

Any kind of advice is appreciated.
Thanks in Advance
David M. Ponce

Yes, you all have been very helpful in me getting rid of these NOS and used, but tested, tubes. Thanks very much to all of you.

I do still have plenty of tubes left. Please buy them! At this point, there are some that I am willing to let go for $1 apiece (6AL5, the odd TV tubes - 27 volt, 18 volt, 24 volt, etc. etc.)
Tell your friends that this poor sod on the internet is going to start losing sleep unless he sells all these tubes. I am just about at that point anyway.

Thanks again to all you good people. For the most part, you are an intelligent and cordial bunch.

PS Please don't send me any more personal checks. Bank Check or Money orders are very much preferred, because the tubes don't sit around my house waiting for the checks to clear.
I know this isn't feasible for everyone, but do your best, and I will accept whatever that is.

Thanks

Well I'm not renewing my ham license this year and I just want
to get rid of my old equipment. It works fine but I just
don't want to be hassled for ever trying to get rid of it.
Here is what I have:

Kenwood TS-120S 100W Rig
80, 40, 20, 15, 10 and WWV bands
Kenwood MC-50 Mic.
Standard More code key (not a paddle).

If your interesed in the rig by itslef or the rig with the
other stuff please let me know via e-mail or telephone. I'll
except the best offer but I am going to sell it. Let me know
what you'll give me. Don't respond via USENET because I'll
never see it. Thanks...

I also am looking for some help with an old Tektronix unit, a "Type CA"
spectrum analyzer plug in unit for the old -- very old -- Type 585 scope
mainframe.

I just got this set for a few bucks, and the spectrum analyzer is doing
something, just not what it should be. It may be misaligned or a part may
be defective, or it may just be that I don't have it tuned in or wired in
properly.

If anyone could help me find a manual for this old bugger, I'd sure
appreciate it.

> The difference in price is approx 20$, but what is it in specifications?
> Allows the H version higher external voltages (>12V), or does it come with
> a "larger" (higher voltage and/or more capacity) battery pack?

The 'R' version has the 4.8v FNB-31, 600mah pack. The 'RH' version has the 9.6v, 600mah pack. The radio develops 5watts TX on either band with 9.6vdc input. It *CANNOT* accept more than 9.6v (or so..), the MOSFETs are quite unforgiving by nature.
My friend bought the 9.6v pack, it heats up both of our radios just sitting in RX mode. Probably due to the audio amplifier being forced to dissapate the additional 4.8v.
Between the heat and the fact that I don't want/or need to use more than 2 watts of RF power, I'm sticking with the 4.8v packs.

Otherwise, love the radio!!

> So, why should QST not accept the ads?

Really. If you have a compalint about their product stand up and tell it. Periphex has a very good reputation, and other than this pseudo-complaint I have not heard a bad word about them.

When a friend had a bad drop-in charger he sent a Periphex pack back (not yet knowing that the charger was at fault), and got it back in <2 weeks along with a letter, and a printout of capacity testing (charge time, current in, current out over time). Not a problem.

Matter of fact, I have both a W&W pack and a Periphex pack (1500mah, 7.2v) for my Kenwood. The W&W started getting short on useful operating time after around 500 cycles, the Periphex is still going at 700+.

Other replies, with *real* specifics on problems/lack there-of on any aftermarket battery companies??

(Snip)

I operated sucessfully when first licenced as motorcycle mobile with a cheap and cheerful installation.

The antenna was a 5/8 wave for 2m. This was fixed to a large panel of PCB to act at a groundplane. The pcb had spring clips which clipped onto the rack on the back of the bike; the idea being that if I came off the bike the antenna would come off too.

The radio was a Kenwood (then Trio in the UK) 2200 which was a 12 (?) channel xtal controlled rig. The internal nicads were adequate for the intended journey length and the rx audio was simply provided by an earpiece. The rig was belt mounted (again, following the rule that if I came off nothing should tie me to the bike).

Tx was simply done by lifting the mike to a part face visor and talking. Cash (lack of) prevented anything more sophisticated.

Did it work ? Yes : many QSO's sucessfully completed. I never came off the bike or got stopped by the law.

Would I do it again : no, I saw sense and bought a car.

Mind you, on a nice warm day when stuck in a que of traffic I do ponder it !

Bike was a Honda 175 BTW. No ignition noise problem.

Before the
FEDERAL COMMUNICATIONS COMMISSION
Washington, D.C. 20554

In the Matter of

Amendment of Part 97 of the)
Commission's Rules to Eliminate)
Certain One-Way Communications in) RM No._____
the Amateur Radio Service Medium)
and High Frequency Bands)

To: The Commission

PETITION FOR RULEMAKING

Frederick O. Maia, by his counsel, requests that the Commission amend Part 97 of its rules to eliminate the provisions which permit Amateur Radio Service stations to transmit one-way information bulletins and international Morse code practice below 30 MHz. Such transmissions do not comport with normal operating practices and, in 1995, they have outlived their usefulness.

The Petitioner

Mr. Maia holds an Amateur Extra Class operator license. His first Amateur station license was issued nearly forty years ago. Besides his life-long interest in Amateur Radio as a hobby, Mr. Maia is committed to serving the Amateur Radio Service through several related activities.

Mr. Maia's newsletter, The W5YI Report, was begun in 1978 and is the nation's oldest Amateur Radio newsletter. When the FCC sought to privatize the license examination function, Mr. Maia was the first to step forward to become a Volunteer-Examiner Coordinator (VEC) on a nationwide basis. The W5YI-VEC was appointed in 1984.

Mr. Maia is devoted to growth in the Amateur Radio Service and the advancement of its members. Mr. Maia was one of the proponents of an entry level license not requiring Morse telegraphy proficiency. The creation of

such a license by the FCC in 1991 has led to significant growth in the Service not only at the VHF/UHF frequency level but at the HF level as well. Mr. Maia is also a source of training materials for Amateur Radio enthusiasts. Mr. Maia has filed comments and petitions in several FCC rule making proceedings.

The Need for a Rule Change

Mr. Maia is concerned about one-way communications in the Amateur Service high frequency (hf) bands on two levels. First, as a licensed Amateur Radio operator, he is personally distressed at the level of anger that now exists on these bands. This anger is primarily caused when one-way, broadcast-type transmissions interrupt two-way communications that are already in progress. This anger is manifested by deliberate attempts to interfere with or "jam" the one-way transmissions.

Second, he is especially concerned about the impact that this anger and the resulting malicious interference has on relatively new amateurs who are increasingly upgrading their Technician VHF Amateur operator licenses to include the long range high frequency operation. The reckless intrusion into on-going conversations and the animosity that these one-way communications engender on the congested HF bands is setting a very bad example to newcomers and is contributing to a general deterioration in the quality of communications in the HF Amateur Service bands.

Permissible One-Way Transmissions

The international law defines the Amateur Service as "A radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs...." Article 32 of the international Radio Regulations refers to "Radiocommunications between amateur stations..." in other words, two-way exchanges of messages or information between Amateur stations are the worldwide norm, as contrasted to one-way "broadcast-type" transmissions.

In the United States, Amateurs generally conduct two-way communications as stated in Section 97.111(a) of the Commission's Rules. There are, however, certain exceptions contained in Section 97.111(b), which permit one-way transmissions to assist in the learning of the international Morse code and the dissemination of information bulletins.

Section 97.3(a)(23) defines an information bulletin as "A message directed to amateur operators consisting solely of subject matter of direct interest to the amateur service." This is a very permissive category and taken in its broadest context, permits just about anything to be transmitted that is even remotely associated with the Amateur Service.

A Pattern of Growing Abuse

Over the years certain stations have become so-called "bulletin stations," transmitting one-way broadcast-type programs on the 75/80, 40 and 20 meter bands and other hf bands as well. Although bulletins and code practice are the exceptions and not the rule, these bulletin stations regularly broadcast on scheduled frequencies regardless of any on-going two-way communications. They are abusing the privilege. The many are suffering at the hands of the few.

The rules clearly state that "...licensees must cooperate in selecting transmitting channels..." and "No frequency will be assigned for the exclusive use of any station." (See 97.101(b)) Yet bulletin stations recklessly go on the air on "their" frequencies at "their" scheduled times without the mandated "cooperation" and without observing the most fundamental of operating practices, namely, to monitor the frequency for use before transmitting. The proliferation of these stations has caused chaos in the amateur community that has now reached crisis proportions.

A cornerstone of the Amateur Service is its "...unique ability to enhance international goodwill." The high frequency band has world-wide range and the image of United States Amateurs is being badly tarnished by this on-going tirade.

Argument

There was a time in the history of the Amateur Radio Service when the benefit to be derived from permitting occasional one-way broadcasts on hf bands outweighed the negative impact of operations of this type on ordinary communications. That time has now passed.

Today there are plenty of other methods of communicating general information to Amateurs, including Amateur vhf packet networks, on-line computer services such as CompuServe, Prodigy, America Online and the World Wide Web pages of the Internet. Similarly, code practice is now easily accomplished via software training and simulation programs.

The increasingly crowded conditions on the hf bands and the ready availability of alternative techniques for code practice and information dissemination have now tipped the scales against the continued operation of bulletin stations on hf. Bulletin stations particularly impact hf operations because of the propagation characteristics of these bands. Simply put, the usefulness of hf bulletin stations no longer outweighs their detriments. They have always been the exception and not the rule and now they should be prohibited for the greater good of the Service.

Conclusion

A major aim of many amateurs is long range communication or "working DX" as it is called. A second popular amateur activity on the hf bands is leisure communications or "rag chewing." The third widespread pursuit is participating in round-table communications about a specific interest or "networks."

None of these activities is compatible with broadcast-type bulletin or code practice stations that come on an occupied channel without first determining if the frequency is already in use. Such stations have outlived their usefulness to the Amateur Radio Service and should now be prohibited in the hf bands.

Suggested Rule Changes

The following rules, which authorize one-way information bulletin and Morse code practice transmissions as exceptions to the general requirement for two-way communications, should be amended to state:

Section 97.111
* * *

(b) In addition to one-way transmissions specifically authorized elsewhere in the Part, an amateur station may transmit the following types of one-way communications:

* * *

(5) Transmissions necessary to assisting persons learning or improving proficiency in, the international Morse code. Such transmissions must be confined to frequencies above 30 MHz.

(6) Transmissions necessary to disseminate information bulletins. Such transmissions must be confined to frequencies above 30 MHz; and

* * *

The following rule, which permits control operators of club stations to accept compensation should be amended to state:

Section 97.113
* * *

(d) The control operator of a club station may accept compensation for the periods of time when the station is transmitting telegraphy practice or information bulletins, provided, however, that such telegraphy practice and/or information bulletins may only be transmitted in the amateur bands above 30 MHz.

Respectfully submitted,
Frederick O. Maia, W5YI

1987. W5YI's Whining Petition

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-19 15:44:33 UTC
From: Dave AB5S/7 <72227.1640@CompuServe.COM>
Message-ID: <3khjh1$1s8$1@mhade.production.compuserve.com>
Source record: 219566
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.policy

The purpose of the W5YI petition is easy to fathom.
He doesn't like the competition, so he's trying
to legislate it out of existance.

Well, messing with the FCC to solve our petty problems
is like poking a sleeping dragon. He's more likely to
eat your stupid butt then fix your problem.

Not everyone has internet access. Not everyone can
afford cw simulation software. Hell, I couldn't
afford a computer until I was over 30! Lots of
people still use code practice.

The bulletins broadcast on the HF bands serve a
useful purpose for many of us. They take-up
a minute fraction of bandwidth on any band.

Those petty, whining old men who make a fuss
about it have their own petty agenda, and it
doesn't have a thing to do these bullentins
"interfereing" with anyone. It's a new
thing and they "just don't like it," or
are pewling because they don't agree with
some subject or other, or some other childish
motivation, since "interfereance" just doesn't
hold water.

I've been a ham over twenty years, and these
whining crybabies have always been a pain in the butt.

Bugging the FCC with your petty crap is a sure
way to get us all screwed bigtime. Never mess
with a government functionary! They're harmless if
left alone.

Bring on the flames, you old farts! I'm tired
of your whining crap!

Most Intensly Sincerely,

David L. Stinson AB5S'/7
5041 N. Maverick St.
Las Vegas, NV 89130

I agree with Dave.
>
Personally I wish W5YI would go take a flying leap and leave
amateur radio alone. He has helped change it enough already.
Waah... code is soooo hard
Waah... the test is sooo hard
Waah... we have to wait sooo long for our license to arrive.
Oh, Boo Hoo... we want it in a nice bubble package from the
local store-on-every-corner place.

Like so many of us I wanted the license. I studied. I learned
something I did not know before. I got it.

While he is taking a flying leap perhaps another organization
might consider leaping after him as well.

I think we ought to let Wayne Green run the whole thing.

Hi everyone, just another amateur here in need of assistance.

I have a MIDLAND 70-154A VHF handheld. It's almost identical to the IC-U16.

The case is the same, the keyboard logic is the same but, I cannot seem to get it into program mode.

It has 16 channels VHF and some of the presets are amateur and some are business band but I tried the func 357159 and vice versa, but the two colons that pop up on the U16 dont show up.

Anyway, is there anyone who knows how to unlock this thing so I can access the program mode??

Thanks so much..

Please respond privately if possible.
Thanks alot

1994. For sale: ham stuff

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-19 21:02:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.8233.3289.0N1D6887@canrem.com>
Source record: 219575

Ok; I'm going to try this again, this time giving less extraneous details.
If you want to know anything further about the following gear I have for
sale, contact me at:
Internet: chris.smart@canrem.com (prefered)
Fidonet: netmail to 1:229/15
Rime: private/routed mail to ->crs

1. Homebrew Power supply, 15-20 amps, 12-15 volts DC (can adjust
voltage); very solid construction, runs very cool most of the time,
better then any commertial jobs I've used. $75.00 Canadian or best
offer.

2. Ten-tek Argosy II, very small 50-watt HF rig; 80, 40, 30, 20, 15, and
10 meters ssb and cw. In great shape; comes with Ten-tek power supply,
beat up but great d-104 microphone, voice readout for speaking frequency
on display.
This is the Argosy with the digital display. Great for mobiles, a backup
rig, a simple station up at the cottage, etc. Asking $450.00 Canadian,
I'll lower the above homebrew power supply to $50 Canadian if I can sell
it with the Ten-tek stuff.

3. Sangean ATS-803A general coverage receiver. 150KHZ-30MHZ and 88-108
FM broadcast, (fm stereo with headphones). 10 memories, sideband or AM,
direct frequency entry, runs on wall adapter or d-cells. This is the same
as the Radioshack DX-440. I'd like $190.00 Canadian, or best offer.
Note: I'm selling the power supply because I need the money; I'll
probably regret it some day. I'm selling the Ten-tek stuff because I
*REALLY want an FT-530, and I'm selling the receiver simply because I love
my little Sony receiver and don't need another swl receiver around.

ATTENTION FRANK E. LOUNSBURY (forgive me if I spelled your name
slightly wrong): I responded to your offer to buy the Ten-tek stuff and
15 amp supply via Internet email, and then didn't get anything back.
Please email me again when you read this if you're still interested.

Chris.

If you have the opportunity, look inside a TRIP-LITE . I have seen the
inside of their power supplies and their UPS units. They do a better
job with the cosmetics than with the internal construction. The
layout and construction is poor making service more difficult.
There may be better power supplies than the ASTRON (at a higher price)
but they are rugged and serviceable... Just one ham's opinion.

1999. Yaesu FT767GX and options

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-20 02:41:40 UTC
From: mille184@gold.tc.umn.edu
Message-ID: <84497.mille184@gold.tc.umn.edu>
Source record: 219580

I am interested in purchasing an FT767GX transceiver, plus any/all of the VHF/UHF band modules, and internal options, either together or separately.

Please reply with all any offers to me at "thomas@email.lommen.com" or at the above address, or by fax to (612) 332-6430.

Tom Miller, AA0UU
15 Ottawa Ave. No.

Thanks!

2000. HELP! Fried TH-78 mic input!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-20 03:20:44 UTC
From: c594911@showme.missouri.edu
Message-ID: <3kisac$moc@news.missouri.edu>
Source record: 219581

I plugged my KAM into my TH-78A dual-bander a few days ago and the radio immediately ran up to full volume and started jumping between the call channel and memory channels. I unplugged it, tried a few times, and then tried my hand-mike. The mic and tnc do the same thing. I think something has gone wrong with my radio. I can't transmit, and the mic causes the radio to gone absolutely nuts.

Otherwise the radio operates just fine - that is without any external connection.

Has this ever happened to anyone? Any ideas on the problem/solution? I'm going to send it to be fixed soon but wanted to see if anyone had any ideas. Thanks!

Newsgroups: rec.radio.amateur.antenna
Distribution: usa
Subject: HELP THIS HAM PLEASE!!! Read!

A fellow ham needs your help!

Lyle Flemming KB7RBV served in the army during WWII. His tour of the South Pacific included Island hopping. He was there when McArthur "returned" to the phillipnes. He saw combat, and was wounded 3 times!
Upon his discharge, he was told that his medals would be mailed to him. These include 3 Purple hearts, bronze star, a several others. That was FIFTY years ago! And to this day he has not gotten them. He has written several letters, even to the president, no response!

LETS GET THIS MAN HIS MEDALS! Afterall, he fought , and gave his best for this country, and all of us!

All you have to do is take a couple of moments, and write a note addressed to "Commander and Chief". Email these letters to me, and I will mail them on to the correct people. Or, just send it direct to the "Secretary of the Army" Please let ME know when you do this.

Its a shame that he has been waiting SO LONG for these. One would think that this kind of thing would not happen. But it does.

Get this man the respect he earned with his dedication, honor, and blood!

THANKS!!! to ALL of you who choose to help!!

: I'd also be interested in hearing comments from anyone who has done this.
: In particular, I'm looking for headset helps, particularly how to
: make one headset work either PTT or VOX, radio mounting tips, and
: suggestions for antennas to work without a ground plane. (I'd
: prefer NOT to home-brew the antenna, so suggestions for commercial
: antennas are preferred.) I do want 2m/70cm ability as well.

: 73 and thanks in advance.

I used to do this on my GS-1000E. I mounted a thin 8 ohm speaker inside the lining on my Bell Star helmet, and a microphone element inside the chin bar. I then led the wires to a microphone cord and terminated them with a 1/4 inch phone plug. This was plugged into a 1/4 phone jack mounted on the Hannigan fairing just ahead of my right leg so that it was easy to disconnect when dismounting - or to yank out in an emergency.

I have experimented with VOX switching, but found that wind noise, especially at higher speeds, and traffic noise levels in general were high enough to make setting the VOX awkward. I eventually went to PTT, and mounted a switch on the left bar so that I could hit it with my thumb without moving my hand very much.

I also operated both mobiles run off the bike's electrical system and handhelds on their own batteries. Suppressing electrical noise on the bike was difficult when using a mobile because my bike was old enough (1979) to have virtually no noise suppression built in, and having to run the antenna cable a few inches from the coils probably didn't help.

I had better luck with a handheld, as I didn't have to deal with the electrical noise generated on the bike's electrical system, just the noise from the plug wires.

This also simplified the antenna system, since for the mobile radio, I had mounted a 5/8 Larsen on the aluminum luggage rack mounted on the rear of the machine. This worked fairly well, with sufficient ground plane to function, but made it awkward for a passenger to swing her leg past the antenna.

Eventually, I settled on using a handheld inside a tank bag as my preferred method. I used a short cable to a bnc connector mounted on a small piece of aluminum plate so that the rubber duck could sit on the outside of the tank bag with my radio warm and dry inside it. I left the PTT switch on the handlebar, but plugged the cable from the switch into an inline two pole connector in the tank bag.

All of this had the obvious disadvantage that you had to stop the bike to change frequencies, but that's probably better anyway.

E-mail if you have specific questions.

I wanted to add that increasing the gain of your receiver does not
necessaryly increase its receiving capacity.

Most of my contacts are made with the gain control in the 11:00 position,
very rarely if ever t do I increase the gain past 12:00 noon positon.

If you can get your antenna up antoher 10 feet, it will be the equivalent
of adding 100 watts of output poer wer and int stalling a
receiver pre-amp.

My antenna is usually kept at my gutterline of my house, but on good DX days
I will go oi ut and push it up about 15 feet he igher and the
diffence is like night and day., Hi Hi.....

We have antenna restrictions in my subdivision, so I try to keep my
antennas a little less obvious.....

Date: 1995-03-20 14:41:38 UTC
From: pruth@ocvaxa.cc.oberlin.edu
Message-ID: <3kk473$6sv@news.cc.oberlin.edu>
Source record: 219589

An acquaintance is getting out of amateur radio due
to time constraints and wants to unload his Yaesu FT-757GX,
FL-7000 1200 watt amplifier/automatic antenna tuner, MFJ
iambic keyer, Yaesu SP-102P phone patch/speaker, low pass
filter, coax and Butternut vertical for $1500 for everything.
Someone used this equipment before him, so it would be 3rd
hand by the time I got it, IF I wanted it. I'm just starting
out, and hoped to get on HF on a more modest level, but this
opportunity presented itself, and I'm debating whether or
not I should get stuck with this particular equipment. Is this
a good price for what I'm getting, and for someone hoping to
go heavy on CW, is a 600 hz selectivity for CW something I
could live with? Is this STATION something I could live
with, or should I take a pass? I need to know before Friday
March 24 if possible, and an e-mail response would be
greatly appreciated as my Usenet Newsreader doesn't work
well all the time here. Many thanks. 73 de KB8USZ --Bill

From: brunelli_pc@delphi.com
Message-ID: <hU-Z+Lu.brunelli_pc@delphi.com>
Source record: 219590

I am having the following noise problem with a mobile installation.
Any suggestions regarding finding or eliminating the problem would
be greatly appreciated. The car is a 1991 Isuzu Trooper and the
rig is a Ten Tec Triton 4, and a Kenwood ts430. The antenna is an
Outbacker Perth mounted on the spare tire carrier on the rear door.

I get a s5+ static noise while the engine is running.
It goes away when the antenna is disconnected.
It does NOT change pitch or volume with load or RPM.
I have grounded the hood, engine, rear door, exhaust, and radio.
I have not received interference from passing vehicles.

It seems that the noise is related to the ignition system
and i am checking with Isuzu regarding resistor wires or
shielded wires.

reply here or via e-mail

thanks,

2014. ht questions

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-20 18:27:49 UTC
From: whitehes@spot.Colorado.EDU
Message-ID: <3kkhf5$6ju@CUBoulder.Colorado.EDU>
Source record: 219595

Hello out there,
Last week I posted a question about the quality of Alinco ht's and the experience/comments that anyone has about the DJ581 (the new dual bander). I never got a reply. So, does anyone have any comments about Alinco quality and about the 581? I am considering buying a new ht but want to be informed. I would also like to know if any of the currently produced dual band radios can be modified for extened rx, including 800 MHz coverage. I do not care to listen to cellular so if a radio is blocked for cell coverage, that is just fine. I travel quite a bit for work and would like to have a radio that "does it all" instead of taking an ht and a scanner.

I currently have a Yaesu Ft23R that is well used but has been a reliable radio for over 7 years (or whenever they first came out). I would like to know if there are any mods to make it rx higher or lower than the one mod that I have done to make it tune from 143 to 163.

Can anyone help me out on this?

Thanks and 73

: 73...JIM

W1AW provides a useful service , unfortunately another station
has starting provide useless QRM in the form of loop tapes ,
broadcasting the same nonsense , non hamrelated , stuff 3 hours
at a time 2 times a day 7 days a week , useing "if w1aw does it,

so can I ", rather then palying his "tapes' when the freq is
not busy , once, he plays it over and over , when they started
trying to hold the net earlier , he started playing the tapes
earlier , it is this abuse , that has made it neccessary , to
make some changes , I am sure W1AW and the ARRL can and
will find a way to provide the service they offer ,only it
will be in the form of 2 way communications ,yes right now
the 2 stations do not use much space , but a serious
problem will develope if more and more start doing these
one way "broadcasts" ...that is why the petetion is being
filed , to stop it before it gets out of control..
If you think about it you should be able to see that ,
Right now this K1MAN , may not bother you , cause of
propagation , and location , but I think you would
agree if somone starts doing what he is doing ,in your
area , or on the freq you use .. sure you could
move to another freq , maybe if you are lucky , and
these days it is hard to find a clear one , but what si
to stop another from decideing to run "loop tapes"
on that one ?..

: A friend has a 2-meter 120-watt power amp that appears to have very little
: gain. When measured with a SWR meter it shows about 1.2 times the input
: reading. Replacing a couple of the fixed caps with trimmers gave a little
: more gain, but not much. The input SWR is fairly low.

Why'd you swap the caps?

: Based on the current draw it seems like something is going on. Could there
: be some terrible mismatch on the output? Perhaps all the power is reflected
: back into the transistors and turned into heat. After all, 12 amps * 14
: volts is almost 170 watts, and it looks like we're getting 40 or so watts
: out for 25 watts in.

I don't know what the output configuration looks like, but it sounds like
there's power being consumed in the final(s), but it isn't reaching the
output connector. Check to see how the output is coupled to the final(s) -
it might be a transformer winding gone bad, or a bad coupling cap. Check
any inductors in the power supply to the final(s), too.

>
>I am in the midst of planning my repeater hardware configuration while awaiting
>final word from our repeater coordinator......all insights appreciated!

My group has one up here in Orange County, CA.

It replaced a older Yaesu repeater, ACC 85 controller which went off
frequency one day. We rewired the same controller and stuck it up and
it works great. Audio is much crisper, good high and lows. You listen
to the input and the output and it sounds the same. Try that with other
repeaters and you can tell a difference in the audio response.

The two neat things we like are the new Vertex comes out of the box running
at around 20 watts. We bumped it up to 35 with no problems. Its been up for
3 months. The other is what I'll call squelch anti-historisas (spell??).
When a weak signal keys up the repeater, the squelch will automaticaly
open up alowing the weakest signals thru w/o cutting off or picket fencing.
At about the point where the signal is unreadable the squelch will tighten up
and the repeater will stop transmitting.
The front end is very sensative, we get far better handheld coverage then ever
before. Also it seems to handle intermod very well. We've left it in open carrier
alot and have had little interference, and this is intermod city!

A decision has been made to replace our other 5 Yaesu repeaters with the new
Vertex's so that should tell you if we like them. The UHF verson came out last
month. We've been using the 2 mtr. and loving it.

Have fun,

Brad

2025. wanted: matching Collins 75A4 speaker

From: martwain@aol.com
Message-ID: <3kl9ki$lhl@newsbf02.news.aol.com>
Source record: 219506

I have just taken the test (and passed) for no-code tech. I have no equipment whatsoever and would really appreciate a helping hand in trying to make heads or tails about what to buy.

I want to do packet.
I want to be able to communicate as far as I can by using phone (voice).
I do have a 2 meter repeater in the area but I am also interested in doing simplex communication of coarse.
I am working on CW and should have that down pat within the end of this month (hopefully) and then I would very much like to transmit on the 80/40/15, etc...

Any help from you guys who have been at this for awhile would be worth it's weight in gold considering the expreience in this group, if totaled up would be an awesome number, I'm sure!

Thanks again,

Marty Wainright
(waiting for call sign
from FCC)

[Author was Spiros Triantafyllopoulos]
[Posted on 21 Mar 1995 02:07:14 GMT]

Hi folks,

I am in desperate need of a digital AM/FM portable radio. Ideally the digital version of the GE Superradio III :-). I can get a nice Grundig or Sony or something with shortwave radio but it's an over kill. (gee, isn't this rec.radio.shortwave? apologies :-)).

Any pointers will be greatly appreciated. I'm looking to spend under $100 for it...

Thanx,

Spiros

The petition was not whining! It was well thought out, literate, and quite
legal in context and execution!

If you have a problem with it, I suggest you write the FCC.

In the petition it was stated to move one-way broadcasting to above 30MHz,
not eliminate it. This would allow the ARRL, K1MAN etc to have LOCAL
representitives broadcast on bands that are not for world-wide use. The
code practice and informational broadcasts could continue, but on a more local
level, and perhaps with more tact and civility than the current 75 meter
horse-races that are now taking place.

Flaming an individual who took a stand (right or wrong in your opinion)
only makes YOU look silly when you call him whining. I suggest you
immediately write the FCC and tell them how you feel. You also might try
writing to the ARRL, or whatever organization you utilize to voice your
opinions. If you don't vote or work toward a peaceful solution, you become

part of the problem. Your voice counts, use it constructively.

W5YI took a stand to propose a solution to a problem that we HAMS don't seem to be able to solve ourselves. Why don't you take a stand to support, oppose or propose you own solution?

I considered the Ten-Tec Scout before purchasing a Kenwood TS50. The
factor that turned me off the Scout was its drift during CW keying.
I read that the processor used for pll loop was also used for cw keying and
the lack of feed back for the oscillator lead to drift during cw transmit.
Since cw is the only hf mode I use, it decided it for me.

Has this changed?

I'd have to agree, unless you happen to be in one of the flat, mostly farm states. Here in Massachusetts, it's tough enough to not end up dead without having to hold up one side of a repeater chat. I don't even like to yak it up too much when I'm in traffic in the car! I have one of those "serial access" brains that can't do two things at once very well...

>I am interested in any reports from owners of the Ten Tec Scout 555 hf rig.

Brian,

Here are the pro's:

nice compact rig, good quiet LO, gives good audio and RX perfor-
mance, Non-existence of unneded knobs, *low cost* (if not marked
up by foreign dealer, that is)

Here are the con's:

strange whine on audio, Filter not as steep as in full blown
HF rig, exchanging modules a bit tricky, so not for quick flip
across bands.

2043. FT-51R DTMF decode? How does it work?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-21 13:00:26 UTC
From: mudaw@uxa.ecn.bgu.edu
Message-ID: <3kmila$10h@ecom2.ecn.bgu.edu>
Source record: 219520

Concerning the FT-51R, It has some sort of a DTMF decoder.
I am trying to find out if it has the capability to decode
DTMF tones, that are not a series of three, separated by a *, and
another three tones. Nobody in my area uses this paging option,
and there is no way for me to test the capabilities of the radio,
except that it can receive some pager frequencies. These
frequencies use DTMF tones, but can I get my HT to decode them?
OR, another idea, if someone used the autopatch on the local
repeater, can the 51R decode the phone number being dialed?

Please let me know how this thing works.
Thanks,
Dave

I recently got a pile of 73 Magazine back issues. A number of Wayne Green editorials mentioned how "incentive licensing" pushed by a certain organization nearly killed ham radio.

What is incentive licensing?

And what's the deal with the apparent feud between the aforementioned magazine and the aforementioned (unnamed) organization?

I have a pair of the 1200mAh packs for a th78a and they are excellent.
They hoild a charge and really give their all, so much that i keep
thinking that i could get away with one. But the second means that i
can go another two days before i need a recharge.

If someone, jeremy?, had a problem with a product, take it up
with the manufacturer. If the manufacturer blows you off, and i
don't mean that you failed to honor your part of the warrantee,
contact the league advertising dep't and see if they will back you up.
As an example, photo mags hold the advertisers to standards and solicit
feedback from readers retgarding advertiser innacurracies or ripoffs.

Hi Clark:

I saw you notes on the TS-940 fan problem and the blown pass
transistors and I'd like to make a few comments and ask a question.

First, you were correct to spend the extra dollars and get the
$12 pass transistors. In my 940, when the inevitable happened and
the pass transistors went South, I used some generic substitutes
and I had "drift" problems with them. They were not stable and
the voltage would fluctuate. I paid about $3 a piece for the
generics and the real McCoy, GE transistors, are about $12,
what you paid.

I am unfamiliar with Teflon lubricant. What is it and where can you
buy it?

There is probably little if any difference in the batteries sold by the various suppliers of replacement inserts and complete packs. And because nothing or no one is perfect, there will be an occasional problem with one. The difference between suppliers will be in how they respond to that occasional problem. From posts in this thread, I have concluded that Periphex may not respond well to these problems. I'm sure most of their batteries perform just fine, but if you happen to get one of the ones that don't, it sounds like you may have trouble getting them to stand behind it.

I've had no personal experience with Periphex, but I have dealt with DC Ace Electronics. I had a couple weak cells in a set of 6 AA's I bought from them. I showed them my receipt at the next hamfest and they gave me 2 new cells. No problem, no hassle. Didn't even want the old ones back. I appreciate that kind of support and will continue to do business with them.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I just picked up an Icom R-1 and need help programming to memory. In trying
to do the example in the book on programming a memory channel to the 2m
freq ... here's what I do:
1. Push MR to get "M"
2. Select the channel # with tuning control.
3. Push CL to select VFO
4. key in frequency.
5. Push F+1(Mode) one or more times to select FM mode. HERE IS THE PROBLEM??
When I simultaneously push F+1 trying to change the mode, the only
thing that seems to happen is the numbers(freq)changes.. not the mode.

Help.............. anyone willing to give me a call and step me thru this
once on line? Or e-mail me your number and I'll call you..... I don't have
Icom's number or I'd call them. The candy store has never been able to
step me thru a learning curve... it's always been fellow hams.

My opinion is that this is a case where the cure is worse than the
disease. I'd suggest that to the 99.99% of amateurs with VFOs, this
is a non-problem which does not require a solution beyond that already
existing in 97.101.

> up by foreign dealer, that is)
>

Absolutely, can't agree more. In fact the good RX performance makes this
rig well worth the price. Lack of features that no one really wants or
needs is a nice plus. Cost is quite competitive. Granted, after you get
all of the modules, it is a nice chunk of change, but still reasonable.

> Here are the con's:
>
> strange whine on audio, Filter not as steep as in full blown
> HF rig, exchanging modules a bit tricky, so not for quick flip
> across bands.
>

I have heard that complaint about the whine from other people, but have yet
to experience the problem myself to know what the heck they are talking about.
I am using a switching power supply in the shack, and have had no problems with
receive audio, or with transmitted audio. I agree that the filter could be
a bit steeper, but I think that you would have to sacrifice the variability
of the filter to get it.
I like the modules. They are easy to put in and remove. My only concern would
be field operation in the winter. I'm not sure how well the plastic that the
extractor is made of would hold up under very cold temperatures. If you are
operating mobile, there is no reason to be rapidly changing bands. Same goes
for most contests. At home I have a separate RX that I can use for scanning
different band conditions.

Everything considered, I do not regret my purchase of the Scout in any way.
It is a very good RX (Ten-Tec has been known for those), combined with a good
TX for CW or SSB (if you like that mode ;)).

I don't represent Ten-Tec in any way, but I like the rig enough that I would
let them use my name if they wanted to. :)

Good to hear. Kenwood used Motorolas in there.

> I am unfamiliar with Teflon lubricant. What is it and where can you
> buy it?

It is actually something I picked up at Radio Shack on the advice of
another 940 owner. Archer Precision Lubricator "with Teflon", about
$2.50 . The fellow recommending it said to use a single drop on the
fan motor shaft about every six months, and he warned never to
over lubricate, it will ruin the motor. (That was something I didn't
know.)

I was told that you go direct through them for everything, but I am not
really sure. As far as the ads in QST, the prices are dead on with that
of Ten Tec.
When I ordered mine, I requested information from them first, just to get
more data on the radio itself. The prices were the same as in QST, the only
thing that was missing from the QST ad were shipping charges. I guess if
you were going to call them to order, they would tell you those over the
phone. If you are going to place a mail order, you need to get those numbers
from Ten Tec.

I've got the larsen (larson?) 1.2g antenna on my car. at those frequencies, you need all the power/signal you can get, so I run a separate antenna for just 1.2, and use the low-loss NMO kit. The cable isn't as flexible, but it also performs better at 1.2. dup/tri/plexers cost you signal.

1.2 is an interesting band- when it works, it works quite well without needing a lot of power. When it doesn't work, give up- 100 watts won't help. To make things exciting, moving a few inches often makes the difference between working well and not at all. Using handhelds on 1.2 you learn to use large metal objects such as vans, fences, etc. as reflectors.

>ad from Ten Tec?

Several years ago, Ten Tec radios were sold thru AES and numerous other places.
There was a massive financial reorg, from what I can gather, and it was decided
to only sell "factory direct."

As a result, you can only get new TT gear from Ten Tec. Similarly, they take
Ten-Tec gear in trade, and recondition it, and sell it. They are thus a good
source for clean, reliable versions of their own equipment, as well.

Many ham shops won't even consider taking a piece of Ten-tec gear in trade,
I have been told. That's OK, though. I like their gear and LOVE the level
of customer support they give.

I have the following Items for sale if anyone is interested. I will
Pay shipping to where-ever you wish. But payment must be validated
prior to shipment.

Yeasu FT-736R Purchased New in 1993. Modified to tx/rx 9600b data.
This unit has 2 meters, 70 centimeters, and 6 meters.
It is an ALL-MODE Transceiver. I also am including
a Icom SM-10 (Graphic Equalizer) Mike. This Radio
has had a lead from 9vdc attached to a NC line on the
female mike jack port, to power the SM-10 mike, without
any external source. Radio and Mike are in excellent
condition. Used for Satilite work only. Never been
outdoors. No scratches.

Asking: $1300.00 (Mike included)

Yeasu FT-102 A gift from a friend so I could listen on HF. This radio
Does not presently transmit. It is in VERY good condition.
I do not know why it does not xmit. However, RX is very
good. And is all I ever used it for. I also have the
repair manuals.

Asking: $200.00 (OBO)

486DX2/66Mhz PC (Intel chip) With the following: 8meg of 70ns Ram
1.2mg Floppy, and 1.44mg Floppy Drives.
(101 key) Keyboard.
Talon (Colorado JUMBO 250 clone) Tape backup.
LogiTech Busmouse.
2ea 16500 Uart Serial Ports.
Trident SVGA card, with 1mg Ram on board.
CTX-6468ni 14" SVGA Monitor. .28 (768x1024)
I have both 540mg and 340mg IDE Hard Drives currently
installed.

Asking: $1250.00 (with both IDE Drives)
$1100.00 (With 540mg HD only.)

Also I have several NE2000 Novell Ethernet Cards For $15.00 each. With
manuals. Coax, and AUI ports.

Kantronics Data Engine With 9k6 modem installed, that has been modified
to function at 19k2, and has been successfully for 4 years!
The TNC also has a 1200b modem in it presently. I do have
one extra 19k2 modified modem that can be sold as well. I
have installed 512k of ram in this TNC as well, and have
successfully used it with the JNOS40 Nos in a Box Eprom set.
It is currently setup with the standard stock Eprom. v1.2.9
I beleive. I recently upgraded to the highest version out.
In November 1994.

Asking: $250.00 (Or Best Offer) for all three modems & tnc.
Manuals included.

Kantronics D4-10 Data Radio (Two Each). Asking $200.00 each! (OBO)
(430.55Mhz & 441.05Mhz in both radios)

Tekk UHF (441.05Mhz) Data Radio (Two Each). (9600b ready). Asking $75.00 each! (FIRM)

I also have to 'defunkt' MFJ-1270B modems. In-operative. Included are
two operative modems a MFJ-2400, and a MFJ-9600. Asking $10.00 for
the MFJ-1270B's (EACH). and $20.00 for the MFJ-2400 , and $50.00 for the
MFJ-9600.

You may reach me at: (609)-247-0005 Anytime. Please leave you phone
number, and Items you are interested in, and Name. I will return your
call ASAP!

Howdy people.

I've acquired a Heathkit HW-101 transciever a couple years ago, and just now I got around to replacing some bad electrolytic caps in it. So now I think it's working like it should, but I can't be sure without having the manual so I can go through the whole calibration procedure.

I don't have enough money to get myself a solid-state HF rig, but I _do_ have enough to pay for postage and copying fees if you wish to send me a copy of your manual.

Please help! :-) Even if you know where I might be able to find a copy of the manual, let me know.

Email is preferred.

Selling direct makes pretty good sense. Almost all ham gear is bought
mail order anyway. Cutting out the retailer lets them compete better
with imports.

I have never had any Ten Tec gear but everyou I know that does seaks
well of them.

Three magazines just about take care of advertising in the US. So I sould
be inexpensive to advertise.

What added features does the Kenwood TH-79A(Deluxe) have from the TH-79A?
and I would like some comments on the radio's performance, I plan to buy
one soon.

Thanks
-Dean (N2OFI)

2072. Timewave DSP 9+ or MFJ DSP filter ?

Subject: Timewave DSP 9+ or MFJ DSP filter ?
Newsgroups: rec.radio.amateur.equipment,rec.radio.amateur.misc
Newsgroups: rec.radio.amateur.digital.misc
Summary:
Keywords:
X-Newsreader: TIN [version 1.2 PL2 [VAX/VMS]]

I am planning on buying a DSP filter for use mainly with QRP CW.
I will get a rig capable of ssb in the near future.
data mode (rtty, amtor, etc) probably won't do for a while.

which one do you recommend that I buy ? the Timewave DSP 9+
cost $200, the MFJ DSP cost $220.

the MFJ seems to have a lot more features than the Timewave.
and MFJ got good reviews about it noise reduction features.
how good is the Timewave unit in reducing white noise, and
the crashing noise I have been hearing lately on 40M cw ?

also what does the Timewave DSP 59+ do over the 9+ except for
being a knob happy ham's delight ?

For owners of these units, I'd like to get your comment about
your likes and dislikes.

please email replies if possible
thanks

2074. Problem with Kenwood 2 Meter All Mode

Newsgroup: rec.radio.amateur.equipment
Date: 1995-03-22 05:40:13 UTC
From: bodmer@intgp9.ih.att.com
Message-ID: <D5tuF2.Mrt@ssbunews.ih.att.com>
Source record: 219454

I am having a problem with my kenwood tr-9130. This is a 2 meter all mode
transceiver which is approximately 14 years old. The radio works great
once it's warmed up, but sometimes when it's cold, the VFO is unstable.
That is, after a minute or two, the VFO display will start flashing,
(like some kind of reset), then the VFO locks on 146.000 and
won't operate. After a few minutes of warm up, the VFO works and allows
me to change to my favorite simplex frequency, sometimes drifting
a little (which is really annoying). If the radio is left on all the
time (or is warmed up for 15 minutes or so), it works great.
Anyone had any similar experiences with old kenwood radios?

Regards,

AA9NF - Pete Bodmer

From: rdewan@uhura.cc.rochester.edu
Message-ID: <1995Mar22.140512.29316@galileo.cc.rochester.edu>
Source record: 219459

I considered the Ten-Tec Scout before purchasing a Kenwood TS50. The
factor that turned me off the Scout was its drift during CW keying.
I read that the processor used for pll loop was also used for cw keying and
the lack of feed back for the oscillator lead to drift during cw transmit.
Since cw is the only hf mode I use, it decided it for me.

Has this changed?

The FT-51R continously decodes all monitored DTMF tones and store them into DTMF memory number 9. As each new tone is received, they will scroll from right to left. Hopt this helps.

The Delux version had the ability to Lockout a memory channel from the
scan mode. This will allwo you to only scan the channel that are active
in you area. I originaly looked at the th79a and then the th79aD. I
finally purchased the Yaesu FT-51R. It has very similar features. I
have found that it has better intermod rejection, a large, illuminated!
keypad, and 8 alpha numeric chars in the display. The downside is that
it has a limited supply voltage input of 4 to 12v and cannot be connect
directly to the cars electrical system.
The standard battery seems to last about a full dat of monitoring.

73,
Tom, KA3GYI

>
>Pse xcuse my English & vy 128 de ... Frank. Bye!

From what I've heard, the base radios are identical, but the battery
packs are different. I was also told that the charger for the -51RH
will work with the smaller pack, but the charger supplied with
the low voltage pack will not work with the larger pack. If you
intend to use 5W, the recommendation is to get the -51RH and buy the
smaller pack. Going the other way requires you to buy an additional
charger as well.

Best advice in either case is to spend the extra $$$ and get a base charger.

I used to think so, too, until he got all whiny and hysterical about how guns have got to be banned, declaring the Second Amendment as misguided, mis-interpreted, outdated, blah, blah, blah...
None of the logic I had grown to expect and respect.
Just the usual over-emotional posturing of the mindlessly liberal anti-gun crowd, ("I suppose you gun nuts think everyone ought to be able to have an nuclear weapon," ect.).
Frankly, I was dissapointed.
You'd think a guy in the First Amendment business would have some appreciation for the second.

: >
: >de WB6THE

: I recently got a pile of 73 Magazine back issues. A number of Wayne
: Green editorials mentioned how "incentive licensing" pushed by a certain
: organization nearly killed ham radio.

: What is incentive licensing?

I was a Tech in those days, (5wpm + General theory), so I didn't lose any of my privledges, but ALL General class operators got screwed, IMO.

One day, as a General, you had full access to the band. The next day you were cut back to the "General portion".
I guess the "incentive" was that if you wished to keep privledges you had already earned, you could take a bunch of new tests.

I was a kid and did not really realize what was going on. According to Green, many pissed off hams said "the hell with it", glutting the market with underpriced used gear, thus torpedoing the new equipment market. As a result, manufacturers and retailers went down the tubes.
Maybe that's why so many of the American manufacturers I recall from the 60's are history. I don't know.

Anybody else licenced through this period? How did you see it?

: And what's the deal with the apparent feud between the aforementioned
: magazine and the aforementioned (unnamed) organization?

Body handling: HTML body converted to readable text

30 wpm.
The processor requires an occasional 200 ms pause to detect drift and correct for it. I've used both the Scout and the TS-50, and considering the price, I feel the Scout is well worth it. I work CW only and have only been bothered by the drift occasionally. The RX in the Scout seems more sensitive than the one in the TS-50, and the QSK is much better.

Build yourself a J-Pole, it should only cost about 7 to 10 bucks, depending
on where you shop...
Here are the dimensions...
All 1/2 inch copper pipe constu ruction...
You will need a T-fitting and a 90deg elbow plus two pipe caps and of course
a hunk of 1/2 pipe....

Overall Length from centerline of horizontal member to tip 37.94 inches.
Stub Length from centerline of horizontal member to tip 12.65 inches.
Separation between elements inside measurement 1-1/4 inches.
Connect point for coax from top of horizontal member 1-1/2 inches.
Connect center conductor to stub, braid to tall vertical.

Any questions, just ask..

JT>I am looking for information on filter compatability for Kenwood
radios. Specifically I am planning to install a 500 Hz. CW filter in
my TS-440. The manual specifies this as a YK-88C filter. I have
located a YK-88C-1 filter which I believe is for later radios;
perhaps the TS-450 etc. The YK-88C-1 filter is configured with the
filter mounted on 'daughter' board which plugs into the radio. The
TS-440 requres that the filter be soldered directly in the radio.
Can I remove the filter from the YK-88C-1 daughterboard and install
it in my TS-440? Since they are both 500 Hz. filters, I guess my
only operational concern is whether they are both positioned in the
same place in the IF passband. As I have no information on the
TS-450, or whatever radio uses the YK-88C-1, I have no way to confirm
this. I can only guess... does anyone know?

I believe that they are both properly positioned for substitution,
however, IF you really want a good CW filter, you might want to consider
the following...

International Radio & Computer (407-489-0956) offers a substitute 400Hz
8-pole(!), CW filter for the TS-440S. This filter has two more poles
than those offered by Kenwood (6-pole filters) and will provide tighter
skirt selectivity and better ultimate rejection of nearby signals. I've
been using these filters in all my Kenwood equipment for the past 15 or
so years with absolutely NO complaints... they ARE more selective than
the ones Kenwood offers.

If you develop an interest in these filters, call IRC and ask about
installation FIRST. The filter must be wired in, and I cannot recall of
it takes any 'special' effort or not... been too long since I installed
the last one.

Wor what it's worth, I operate CW 98% of the time, mostly contesting and
Dxing... so I've given their filters a pretty workout over the years.

I am in need of some assistance here please. I have a
Kenwood TH-77a handheld radio that has had the crossband repeat mod done
to it.

It has been some time since I did this and I have lost the
information on the method to turn this on and make it work. Can someone
out there please enlighten me as to the button combinaiton on power up to
turn on the cross band repeat?

>

The only feud, if it really existed, was due to W.G.'s schizophrenia,
a problem he continues to battle with increasing ineffectiveness.

I was licensed during that period, received the General in '67 (I was
fifteen at the time). Despite both technical and Morse ability, I didn't
bother to upgrade until 1989. Incentive licensing did not keep me off
the air, nor did it keep me from buying equipment, and I know very few
who quit the hobby as a result of the changes. Yes, we were P.O.'d,
but we didn't quit.

What killed American amateur equipment manufacturers was the same
thing that killed so many other industries - imports. The first one I remember
was the Yaesu FT-101. A friend of mine bought one around 1971 or 72,
and this rig (and those that immediately followed) went a long ways
towards nailing the coffins of a number of companies including SBE,
Swan, etc.

Ham equipment wasn't alone in this, but I was more than a little surprised
that the Japanese found our market sufficient to warrant the engineering
and marketing costs. TV's I understand, but not ham equipment.

Hmmm, guess you guys weren't around for Norton motorcycles or
427 tunnel-ram 'Vettes either? I used to bet my friends they couldn't
get the twenty dollar bill out of the glove compartment before I hit fourth gear.
Never lost a bet, but someone finally leaked the fact that my front wheels
didn't actually hit the ground until the 3-4 shift. Heh, heh.

From: ag001@lafn.org
Message-ID: <1995Mar23.131917.6095@lafn.org>
Source record: 219487

Need help in selecting a handheld dual-bander
(144MHz/440MHz). Is the Kenwood TH-79A
better than the Alinco DJ-580T? Is Yaesu any
good? What would be a reasonable price to
pay for each? What are advantages/shortcomings?
HELP! Thanks. KE6OCM.

... low receive level problem on the
2 meter side. I've had it into ICOM once already. Worked fine for
about two months and back to the same problem. Seems as though
one of the PIN diodes was replaced in the fix... Is this a chronic
problem with this rig??? Anyone else have the same or similar
problem???

Yep; had that problem myself last year. Seems the rx diode (if I had
schematic at hand, I'd tell you exactly which one) doesn't like great
big whopping high signal levels such as what happens when you leave it
connected to an external antenna a few feet from the antenna of a 50W
2M station that's in regular use (on TCP/IP).

Rx signal level as reported by the s-meter dropped steadily down over a
period of months until it became essentially useless. Now I leave it
connected to a lower gain antenna in the cellar :-)

> Since cw is the only hf mode I use, it decided it for me.
>
> Has this changed?

No, nothing has changed, but is it just me? I have not had any problems
with drift during keying. Everything works just great. I have no whine
sound that many have commented on. I have no annoying thump on the audio
AGC attack (unlike my MFJs). I find the modules easy to put in and to
remove (although I am worried about field operation in the Winter, I didn't
have a chance this Winter to try it). The adjustable filter is not as
steep as I would sometimes like it to be, but it works well. The built-in
keyer is easy to work with. I do wish that it had a front, or at least a
rear panel power output adjustment.
I may sound like a commercial for this radio, but I am in no way, shape,
or form associated with Ten Tec, except as a buyer of this radio. I just
am very pleased with my purchase of this little radio. Who knows, I may
find some faults as I continue to use it, but for now I am quite happy with
it, and would recommend it. It isn't fancy, but it has many more features
than my homebrew stuff, or boatanchors.
